Art Meets Mathematics in the Fourth Dimension Stephen Leon Lipscomb, 2014-10-13 To see objects that live in the fourth dimension we humans would need to add a fourth dimension to our three dimensional vision An example of such an object that lives in the fourth dimension is a hyper sphere or 3 sphere The quest to imagine the elusive 3 sphere has deep historical roots medieval poet Dante Alighieri used a 3 sphere to convey his allegorical vision of the Christian afterlife in his Divine Comedy In 1917 Albert Einstein visualized the universe as a 3 sphere describing this imagery as the place where the reader s imagination boggles Nobody can imagine this thing Over time however understanding of the concept of a dimension evolved By 2003 a researcher had successfully rendered into human vision the structure of a 4 web think of an ever increasingly dense spider s web In this text Stephen Lipscomb takes his innovative dimension theory research a step further using the 4 web to reveal a new partial image of a 3 sphere Illustrations support the reader s understanding of the mathematics behind this process Lipscomb describes a computer program that can produce partial images of a 3 sphere and suggests methods of discerning other fourth dimensional objects that may serve as the basis for future artwork [Remote Sensing Time Series Image Processing](#) Qihao Weng, 2018-04-17 Today remote sensing technology is an essential tool for understanding the Earth and managing human Earth interactions There is a rapidly growing need for remote sensing and Earth observation technology that enables monitoring of world s natural resources and environments managing exposure to natural and man made risks and more frequently occurring disasters and helping the sustainability and productivity of natural and human ecosystems The improvement in temporal resolution revisit allows for the large accumulation of images for a specific location creating a possibility for time series image analysis and eventual real time assessments of scene dynamics As an authoritative text Remote Sensing Time Series Image Processing brings together active and recognized authors in the field of time series image analysis and presents to the readers the current state of knowledge and its future directions Divided into three parts the first addresses methods and techniques for generating time series image datasets In particular it provides guidance on the selection of cloud and cloud shadow detection algorithms for various applications Part II examines feature development and information extraction methods for time series imagery It presents some key remote sensing based metrics and their major applications in ecosystems and climate change studies Part III illustrates various applications of time series image processing in land cover change disturbance attribution vegetation dynamics and urbanization This book is intended for researchers practitioners and students in both remote sensing and imaging science It can be used as a textbook by undergraduate and graduate students majoring in remote sensing imaging science civil and electrical engineering geography geosciences planning environmental science land use energy and GIS and as a reference
