Shadow Point Amy Briant, 2010-12-01 It wasn't easy getting to Shadow Point Turns out it's even harder to leave Madison McPeake not in the best mood most of the time has just been not quite fired told her brother is dead discovered she's responsible for a five year old niece she's never met and realized she has to go all the way to San Diego to see to her brother's affairs Isolated from the world by geography and a navy base bristling with security Shadow Point is scarcely habitable at least Madison thinks so Coping with the living conditions while getting to know her niece is a daily challenge Things get easier when the next door neighbor Dr Alice Piper seems as eager to share smoldering glances as Madison is But something's not right and Madison's questions about her brother's death go unanswered Madison's not sure if unnerving events are actually subtle warnings to stop her inquiries The sexy alluring Piper doesn't seem to think anything's amiss which only compounds Madison's fears And every time she makes up her mind to pack up her niece and go it's as if someone or something has decided she should stay Debut writer Amy Briant has crafted a heroine with more vices than graces in Madison McPeake who narrates the mystery and passion and hair raising surprises of Shadow Point [3D Online](#)

development process Local Features in Natural Images via Singularity Theory James Damon, Peter Giblin, Gareth Haslinger, 2016-09-30 This monograph considers a basic problem in the computer analysis of natural images which are images of scenes involving multiple objects that are obtained by a camera lens or a viewer's eye. The goal is to detect geometric features of objects in the image and to separate regions of the objects with distinct visual properties. When the scene is illuminated by a single principal light source we further include the visual clues resulting from the interaction of the geometric features of objects, the shade/shadow regions on the objects and the apparent contours. We do so by a mathematical analysis using a repertoire of methods in singularity theory. This is applied for generic light directions of both the stable configurations for these interactions whose features remain unchanged under small viewer movement and the generic changes which occur under changes of view directions. These may then be used to differentiate between objects and determine their shapes and positions.

Goudas,2012-12-06 After many decades spent in astronomical semi obscurity the Moon has of late suddenly emerged to claim renewed interest on the part of the students of astronomy as well as of other branches of physical science and technology and the reasons which brought this about are indeed of historical significance From time immemorial astronomy has been debarred from the status of a genuine experimental science by the utter remoteness of the objects of its study With the exception of meteors those small freaks of cosmic matter intercepted by the Earth on its perpetual journey through space the properties of all celestial bodies outside the gravitational confines of our planet could be studied only at a distance namely from the effect of attraction exerted by their masses or from the ciphered message of their light brought to us by nimble footed photons across the intervening gaps of space A dramatic emergence of long range rockets in the last decade bids fair to bring about a profound change in this situation On September 13 1959 a memorable date in the history of human endeavour a man made missile of Russian origin crash landed on the surface of the Moon in the region of its Mare Imbrium

and thus ended the age long separation of the Earth and its only natural satellite which lasted not less than 4t billion years
