Modern Spherical Functions Masaru Takeuchi, 1994 This book presents an exposition of spherical functions on compact symmetric spaces from the viewpoint of Cartan Selberg Representation theory invariant differential operators and invariant integral operators play an important role in the exposition The author treats compact symmetric pairs spherical representations for compact symmetric pairs the fundamental groups of compact symmetric spaces and the radial part of an invariant differential operator Also explored are the classical results for spheres and complex projective spaces and the relation between spherical functions and harmonic polynomials This book is suitable as a graduate textbook

The Schrodinger Model for the Minimal Representation of the Indefinite Orthogonal Group $SO(p,q)$ Toshiyuki Kobayashi, Gen Mano, 2011 The authors introduce a generalization of the Fourier transform denoted by \mathcal{F}_C on the isotropic cone C associated to an indefinite quadratic form of signature $n_1 - n_2$ on $\mathbb{R}^{n_1 + n_2}$ even This transform is in some sense the unique and natural unitary operator on $L^2(C)$ as is the case with the Euclidean Fourier transform $\mathcal{F}_{\mathbb{R}^n}$ on $L^2(\mathbb{R}^n)$ Inspired by recent developments of algebraic representation theory of reductive groups the authors shed new light on classical analysis on the one hand and give the global formulas for the L^2 model of the minimal representation of the simple Lie group $GO_{n_1 - 1, n_2 - 1}$ on the other hand

Geometric Analysis and Integral Geometry Eric Todd Quinto, Fulton Gonzalez, Jens Gerlach Christensen, 2013 Provides an historical overview of

several decades in integral geometry and geometric analysis as well as recent advances in these fields and closely related areas It contains several articles focusing on the mathematical work of Sigurdur Helgason including an overview of his research by Gestur Olafsson and Robert Stanton

Noncommutative Differential Geometry and Its Applications to Physics Yoshiaki Maeda,Hitoshi Moriyoshi,Hideki Omori,Daniel Sternheimer,Tatsuya Tate,Satoshi Watamura,2012-12-06 Noncommutative differential geometry is a new approach to classical geometry It was originally used by Fields Medalist A Connes in the theory of foliations where it led to striking extensions of Atiyah Singer index theory It also may be applicable to hitherto unsolved geometric phenomena and physical experiments However noncommutative differential geometry was not well understood even among mathematicians Therefore an international symposium on commutative differential geometry and its applications to physics was held in Japan in July 1999 Topics covered included deformation problems Poisson groupoids operad theory quantization problems and D branes The meeting was attended by both mathematicians and physicists which resulted in interesting discussions This volume contains the refereed proceedings of this symposium Providing a state of the art overview of research in these topics this book is suitable as a source book for a seminar in noncommutative geometry and physics

Geometric Aspects of Functional Analysis Bo'az Klartag,Shahar Mendelson,Vitali D. Milman,2012-07-25 This collection of original papers related to the Israeli GAFA seminar on Geometric Aspects of Functional Analysis from the years 2006 to 2011 continues the long tradition of the previous volumes which reflect the general trends of Asymptotic Geometric Analysis understood in a broad sense and are a source of inspiration for new research Most of the papers deal with various aspects of the theory including classical topics in the geometry of convex bodies inequalities involving volumes of such bodies or more generally logarithmically concave measures valuation theory probabilistic and isoperimetric problems in the combinatorial setting volume distribution on high dimensional spaces and characterization of classical constructions in Geometry and Analysis like the Legendre and Fourier transforms derivation and others All the papers here are original research papers

Linear Partial Differential Equations and Fourier Theory Marcus Pivato,2010-01-07 Do you want a rigorous book that remembers where PDEs come from and what they look like This highly visual introduction to linear PDEs and initial boundary value problems connects the math to physical reality all the time providing a rigorous mathematical foundation for all solution methods Readers are gradually introduced to abstraction the most powerful tool for solving problems rather than simply drilled in the practice of imitating solutions to given examples The book is therefore ideal for students in mathematics and physics who require a more theoretical treatment than given in most introductory texts Also designed with lecturers in mind the fully modular presentation is easily adapted to a course of one hour lectures and a suggested 12 week syllabus is included to aid planning Downloadable files for the hundreds of figures hundreds of challenging exercises and practice problems that appear in the book are available online as are solutions

Notices of the American Mathematical Society American Mathematical

Society,1994 *Methods and Applications of Analysis* ,1998 **Quadratic Forms -- Algebra, Arithmetic, and Geometry**

Ricardo Baeza,2009-08-14 This volume presents a collection of articles that are based on talks delivered at the International Conference on the Algebraic and Arithmetic Theory of Quadratic Forms held in Frutillar Chile in December 2007 The theory of quadratic forms is closely connected with a broad spectrum of areas in algebra and number theory The articles in this volume deal mainly with questions from the algebraic geometric arithmetic and analytic theory of quadratic forms and related questions in algebraic group theory and algebraic geometry Hokkaido Mathematical Journal ,2004 **Algebraic Geometry**

Masayoshi Miyanishi, Students often find in setting out to study algebraic geometry that most of the serious textbooks on the subject require knowledge of ring theory field theory local rings and transcendental field extensions and even sheaf theory Often the expected background goes well beyond college mathematics This book aimed at senior undergraduates and graduate students grew out of Miyanishi s attempt to lead students to an understanding of algebraic surfaces while presenting thenecessary background along the way Originally published in Japanese in 1990 it presents a self contained introduction to the fundamentals of algebraic geometry This book begins with background on commutative algebras sheaf theory and related cohomology theory The next part introduces schemes andalgebraic varieties the basic language of algebraic geometry The last section brings readers to a point at which they can start to learn about the classification of algebraic surfaces **Geometric Theory of Functions of a Complex Variable**

Gennadiĭ Mikhaĭlovich Goluzin,1969 Tokyo Journal of Mathematics ,2005 **Local Properties of Distributions of Stochastic Functionals**

Yu. A. Davydov, M. A. Lifshits, andN. V. Smorodina,1998-02-10 This book investigates the distributions of functionals defined on the sample paths of stochastic processes It contains systematic exposition and applications of three general research methods developed by the authors i The method of stratifications is used to study the problem of absolute continuity of distribution for different classes of functionals under very mild smoothness assumptions It can be used also for evaluation of the distribution density of the functional ii The method of differential operators is based on the abstract formalism of differential calculus and proves to be a powerful tool for the investigation of the smoothness properties of the distributions iii The superstructure method which is a later modification of the method of stratifications is used to derive strong limit theorems in the variation metric for the distributions of stochastic functionals under weak convergence of the processes Various application examples concern the functionals of Gaussian Poisson and diffusion processes as well as partial sum processes from the Donsker Prokhorov scheme The research methods and basic results in this book are presented here in monograph form for the first time The text would be suitable for a graduate course in the theory of stochastic processes and related topics **Introduction to the Theory of Linear Nonselfadjoint Operators**

Israel Gohberg,Mark Grigor'evich Kreĭn,1978 **Elliptic Functions and Elliptic Integrals**

Viktor Prasolov,Yuri Solovyev,1997-09-16 This book is devoted to the geometry and arithmetic of elliptic curves and to elliptic functions with applications to algebra and number theory It

includes modern interpretations of some famous classical algebraic theorems such as Abel's theorem on the lemniscate and Hermite's solution of the fifth degree equation by means of theta functions. Suitable as a text, the book is self-contained and assumes as prerequisites only the standard one-year courses of algebra and analysis.

Characters of Finite Groups. Part 1 I. A. G. Berkovich, E. M. Zhmud', 1997-12-02. This book discusses character theory and its applications to finite groups. The work places the subject within the reach of people with a relatively modest mathematical background. The necessary background exceeds the standard algebra course with respect only to finite groups. Starting with basic notions and theorems in character theory, the authors present a variety of results on the properties of complex-valued characters and applications to finite groups. The main themes are degrees and kernels of irreducible characters, the class number and the number of nonlinear irreducible characters, values of irreducible characters, characterizations and generalizations of Frobenius groups and generalizations and applications of monomial groups. The presentation is detailed and many proofs of known results are new. Most of the results in the book are presented in monograph form for the first time. Numerous exercises offer additional information on the topics and help readers to understand the main concepts and results.

Linear and Quasi-linear Equations of Parabolic Type Olga A. Ladyženskaja, Vsevolod Alekseevich Solonnikov, 1988. Equations of parabolic type are encountered in many areas of mathematics and mathematical physics and those encountered most frequently are linear and quasi-linear parabolic equations of the second order. In this volume, boundary value problems for such equations are studied from two points of view: solvability, unique or otherwise, and the effect of smoothness properties of the functions entering the initial and boundary conditions on the smoothness of the solutions.
