**Modern Statistics for the Life Sciences** Wageningen UR.,2008      **Modern Statistics for the Life Sciences** Alan Grafen,Rosemary Hails,2002-03-21 Model formulae represent a powerful methodology for describing discussing understanding and performing that large part of statistical tests known as linear statistics The book aims to put this methodology firmly within the grasp of undergraduates      **Statistical Rethinking** Richard McElreath,2018-01-03 Statistical Rethinking A Bayesian Course with Examples in R and Stan builds readers knowledge of and confidence in statistical modeling Reflecting the need for even minor programming in today s model based statistics the book pushes readers to perform step by step calculations that are usually automated This unique computational approach ensures that readers understand enough of the details to make reasonable choices and interpretations in their own modeling work The text presents generalized linear multilevel models from a Bayesian perspective relying on a simple logical interpretation of Bayesian probability and maximum entropy It covers from the basics of regression to multilevel models The author also discusses measurement error missing data and Gaussian process models for spatial and network autocorrelation By using complete R code examples throughout this book provides a practical foundation for performing statistical inference Designed for both PhD students and seasoned professionals in the natural and social sciences it prepares them for more advanced or specialized statistical modeling Web Resource The book is accompanied by an R package rethinking that is available on the author s website and GitHub The two core functions map and map2stan of this package allow a variety of statistical models to be constructed from standard model formulas      *Fundamental Statistical Concepts and Techniques in the Biological and Environmental Sciences* A. Bradley Duthie,2024-10-08 *Fundamental Statistical Concepts and Techniques in the Biological and Environmental Sciences* With jamovi is an introductory textbook for learning statistics It starts with the very basics and prioritises helping the reader to develop a conceptual understanding of statistics and apply the most fundamental statistical tools New concepts are introduced with examples designed to be familiar to the reader serving as a useful starting point for exploring more abstract concepts Key Features Designed to be accessible for students learning statistics in biological and environmental sciences Utilizes the statistical software jamovi to explore new concepts Prioritizes good statistical judgement over adherence to protocols This book will be useful to students beginning their study of statistical concepts in biological and environmental sciences whilst also acting as an insightful resource for teachers using jamovi in the classroom *Fundamental Statistical Concepts and Techniques in the Biological and Environmental Sciences* With jamovi is a valuable resource for anyone who wishes to understand and apply statistical techniques commonly used in the biological and environmental sciences      **The Practice of Statistics in the Life Sciences** Brigitte Baldi,David S. Moore,2009 Exploring data From exploratioin to inference Inference about variables Optional companion chapters      **Statistics for the Life Sciences** Myra L. Samuels,Jeffrey A. Witmer,Andrew A. Schaffner,2016 The Fifth Edition of Statistics for the Life Sciences uses authentic

examples and exercises from a wide variety of life science domains to give statistical concepts personal relevance enabling students to connect concepts with situations they will encounter outside the classroom The emphasis on understanding ideas rather than memorizing formulas makes the text ideal for students studying a variety of scientific fields animal science agronomy biology forestry health medicine nutrition pharmacy physical education zoology and more In the fifth edition randomization tests have been moved to the fore to motivate the inference procedures introduced in the text There are no prerequisites for the text except elementary algebra

**The Theoretical Biologist's Toolbox** Marc Mangel,2006-07-27 Mathematical modelling is widely used in ecology and evolutionary biology and it is a topic that many biologists find difficult to grasp In this new textbook Marc Mangel provides a no nonsense introduction to the skills needed to understand the principles of theoretical and mathematical biology Fundamental theories and applications are introduced using numerous examples from current biological research complete with illustrations to highlight key points Exercises are also included throughout the text to show how theory can be applied and to test knowledge gained so far Suitable for advanced undergraduate courses in theoretical and mathematical biology this book forms an essential resource for anyone wanting to gain an understanding of theoretical ecology and evolution

Starting out in Statistics Patricia de Winter,Peter M. B. Cahusac,2014-11-17 To form a strong grounding in human related sciences it is essential for students to grasp the fundamental concepts of statistical analysis rather than simply learning to use statistical software Although the software is useful it does not arm a student with the skills necessary to formulate the experimental design and analysis of a research project in later years of study or indeed if working in research This textbook deftly covers a topic that many students find difficult With an engaging and accessible style it provides the necessary background and tools for students to use statistics confidently and creatively in their studies and future career Key features Up to date methodology techniques and current examples relevant to the analysis of large data sets putting statistics in context Strong emphasis on experimental design Clear illustrations throughout that support and clarify the text A companion website with explanations on how to apply learning to related software packages This is an introductory book written for undergraduate biomedical and social science students with a focus on human health interactions and disease It is also useful for graduate students in these areas and for practitioners requiring a modern refresher

**Special Issue: Age and Growth of Chondrichthyan Fishes: New Methods, Techniques and Analysis** John K. Carlson,Kenneth J. Goldman,2007-04-05 This volume offers a collection of papers on the quantitative assessment of age and growth in Chondrichthyan fishes It details new hard parts for assessments of age such as caudal thorns new techniques like bomb radiocarbon for validation and reexaminations of previous age and growth models It also examines the importance of assessing the precision and accuracy of statistical formulas analyses and models used in age and growth studies

Mathematical Modeling the Life Sciences N. G. Cogan,2022-09-09 The purpose of this unique textbook is to bridge the gap between the need for numerical solutions to modeling techniques through computer

simulations to develop skill in employing sensitivity analysis to biological and life sciences applications The underpinning mathematics is minimized The focus is on the consequences implementation and application Historical context motivates the models An understanding of the earliest models provides insight into more complicated ones While the text avoids getting mired in the details of numerical analysis it demonstrates how to use numerical methods and provides core codes that can be readily altered to fit a variety of situations Numerical scripts in both Python and MATLAB are included Python is compiled in Jupyter Notebook to aid classroom use Additionally codes are organized and available online One of the most important skills requiring the use of computer simulations is sensitivity analysis Sensitivity analysis is increasingly used in biomathematics There are numerous pitfalls to using sensitivity analysis and therefore a need for exposure to worked examples in order to successfully transfer their use from mathematicians to biologists The interconnections between mathematics and the life sciences have an extensive history This book offers a new approach to using mathematics to model applications using computers to employ numerical methods and takes students a step further into the realm of sensitivity analysis With some guidance and practice the reader will have a new and incredibly powerful tool to use <https://www.math.fsu.edu/cogan/BookCodes.html> **Conference proceedings. **Social Evolution and Inclusive Fitness Theory** James A.R. Marshall, 2019-01-08 Social behavior has long puzzled evolutionary biologists since the classical theory of natural selection maintains that individuals should not sacrifice their own fitness to affect that of others Social Evolution and Inclusive Fitness Theory argues that a theory first presented in 1963 by William D Hamilton inclusive fitness theory provides the most fundamental and general explanation for the evolution and maintenance of social behavior in the natural world James Marshall guides readers through the vast and confusing literature on the evolution of social behavior introducing and explaining the competing theories that claim to provide answers to questions such as why animals evolve to behave altruistically Using simple statistical language and techniques that practicing biologists will be familiar with he provides a comprehensive yet easily understandable treatment of key concepts and their repeated misinterpretations Particular attention is paid to how more realistic features of behavior such as nonadditivity and conditionality can complicate analysis Marshall highlights the general problem of identifying the underlying causes of evolutionary change and proposes fruitful approaches to doing so in the study of social evolution Social Evolution and Inclusive Fitness Theory describes how inclusive fitness theory addresses both simple and complex social scenarios the controversies surrounding the theory and how experimental work supports the theory as the most powerful explanation for social behavior and its evolution
