## **Modern Trains And Splendid Stations:**

Modern Trains and Splendid Stations Martha Thorne, Art Institute of Chicago, 2001 Inter city rail travel is one of the dominant facts of modern life From the early nineteenth century when the first train stations cathedrals of technology buildings without precedent in the history of architecture were constructed these focal points of transportation have enjoyed a unique status in public life They have come a long way from the simple wooden shed erected in Liverpool England in 1830 In the wake of the rail renaissance of the 1980s and 1990s new train stations from the U S to Japan must respond to increasingly complex challenges as high speed trains become more and more common and the next generation of magnetically levitated trains approaches The state of the art examples featured in Modern Trains and Splendid Stations are analyzed from several perspectives as generators of urban renewal as new architectural icons and as connecting points from different means of transportation Such internationally renowned architects as Helmut Jahn in the United States Nicholas Grimshaw in England and Arata Isozaki in Japan have all been involved in station design BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved

### **Transport Terminals and Modal Interchanges**

Christopher Blow, 2012-05-23 This is the first book to review a trend in transport systems which has only recently come of age the multi modal interchange Separate modes of transport are being linked through joined up thinking and transport designers and authorities are only now able to exploit interchange opportunities This book presents examples of how these new opportunities have been planned and designed and outlines how transfer and mobility can be improved in the future Blow takes the airport as the focal point of true multi modal passenger terminals and presents the development of these buildings as representing a new experience in travel The book shows that the success of the experience of transferring from one mode of transport to another depends on the many factors including congestion in an already overloaded system and the way that designers and managers have addressed contingency planning International examples are drawn from areas where mobility is most concentrated and the demands on design are at their highest The book also addresses important issues of rebuilding and redevelopment where once separate modes of transport are being linked to each other and where short term inconveniences rectify past wrongs in the long term It is a compendium of architectural and engineering achievement
