Natural Philosophy Alister E. Cosmopolis Stephen Toulmin, 1992-11 In the seventeenth century a vision arose which was to captivate the Western imagination for the next three hundred years the vision of Cosmopolis a society as rationally ordered as the Newtonian view of nature While fueling extraordinary advances in all fields of human endeavor this vision perpetuated a hidden yet persistent agenda the delusion that human nature and society could be fitted into precise and manageable rational categories Stephen Toulmin confronts that agenda its illusions and its consequences for our present and future world By showing how different the last three centuries would have been if Montaigne rather than Descartes had been taken as a starting point Toulmin helps destroy the illusion that the Cartesian quest for certainty is intrinsic to the nature of science or philosophy

Richard M Rorty University of Virginia Toulmin has now tackled perhaps his most ambitious theme of all His aim is nothing less than to lay before us an account of both the origins and the prospects of our distinctively modern world By charting the evolution of modernity he hopes to show us what intellectual posture we ought to adopt as we confront the coming millennium

Paulin Hountondji and the Science Question in Africa Zeyad el Nabolsy, 2025-07-18 This book offers a systematic reconstruction of

Paulin Hountondji's contributions to the debate about the place of modern science on the African continent. The book shows that Hountondji develops an account of modern science that is sociologically sensitive to the entanglement between modern science and colonialism on the African continent without falling into epistemic relativism about the claims of modern science. It is argued that Hountondji's views on modern science express a strong historical materialist influence and that he develops a theory of science that draws both on the Hessen-Grossmann hypothesis and dependency theory. Thus this book brings together two strands of historical materialist thought about science that have hitherto been isolated from one another. This book is of interest to scholars who specialize in African philosophy, history and philosophy of science, global philosophy and African studies.

God and Intelligence in Modern Philosophy Fulton John Sheen, 1925

Faith and Modern Thought Timothy Hull, 2020-10-29. Get the full picture. Understand the whole story. Faith and Modern Thought is a jargon-busting and engaging introduction providing an imaginative and creative way into the great minds that have forged the modern world, especially Kant and Hegel, and the revolutionary philosophies of existentialism and Marxism they inspired. Tim Hull provides the wider intellectual picture, the fuller philosophical story in which modern theology was forged. After an engaging introduction to the European Enlightenment and the cultural crisis it triggered, the stage is set to understand the essence of modern theology. From that essential background, the radical faith of many of the most influential of modern theologians and philosophers of religion is explored, exposing a deep-rooted indebtedness to the Enlightenment tradition.

Her unique background and fervent idealism inspired her lifelong dedication to advocating for the synthesis of science, religion, and philosophy, as demonstrated in this extensive collection. Blavatsky's work has profoundly influenced various spiritual and philosophical movements, cementing her legacy as a pivotal figure in the Western esoteric tradition. For readers interested in spiritual exploration and the confluence of diverse traditions, The Collected Works of Helena Blavatsky serves not only as a foundational text but also as a remarkable journey into the depths of metaphysical inquiry.
