John Michels (Journalist),1922 **Cognition and Fact** Robert S. Cohen,Thomas Schnelle,2012-12-06 Within the last ten years the interest of historians and philosophers of science in the epistemological writings of the Polish medical

microbiologist Ludwik Fleck 1896-1961 who had up to then been almost completely unknown has advanced with great strides. His main writings on epistemological questions were published in the mid 1930s but they remained almost unnoticed. Today however one may rightly call Fleck a classical figure both of epistemology and of the historical sociology of science, one whose works are comparable with Popper's *Logic of Scientific Discovery* or Merton's pioneering study of the relations among economics, Puritanism and natural science, both also originally published in the mid 1930s. The story of this book of materials on Ludwik Fleck is also the story of the reception of Ludwik Fleck. In this volume some essential materials which have been produced by that reception have been gathered together. We will sketch both the reception and the materials.

The Baking Powder Controversy Abraham Cressy Morrison, 1904 *Advances in Animal and Comparative Physiology*
 G. Pethes, V. L. Frenyó, 2013-10-22 *Advances in Physiological Sciences* Volume 20 *Advances in Animal and Comparative Physiology* covers the proceedings of the symposia of the 28th International Congress of Physiology. The book discusses several studies that tackle issues about the advances in animal and comparative study. The text is comprised of 61 chapters in which Chapter 4 and the succeeding chapters are grouped into eight parts based on the topic of the studies. The opening chapter explains sensory modalities beyond human perception while Chapter 2 discusses trends in the physiology of domesticated animals. Chapter 3 reviews muscles in living animals which is followed by topics grouped into parts. The first part deals with fetal homeostasis while the second part discusses control of corpora lutea function of ruminant and non-ruminant domesticated animals. The third part deals with the comparative physiology of lactation in farm animals while the fourth part tackles digestion in non-ruminant herbivorous animals. Parts 5 and 6 cover topic on diving which includes metabolism, physiology and control. The seventh part discusses phylogenesis of hormones and hormone receptors and the last part covers neuromuscular transmission in invertebrates. Researchers whose line of work concerns the physiological properties of animals will find this book as a great source of related literatures.

Perspectives in Methodology for Study of the Microcirculation K. Messmer, F. Hammersen, B. W. Zweifach, 1984-11-20 **The Arterial System** R.D. Bauer, R. Busse, 2012-12-06 This book summarizes the papers presented at the symposium *Dynamics and Regulation of the Arterial System* held at Erlangen on 28-30 October 1977 in honor of Professor Erik Wetterer. The aim of the symposium was an intensive exchange of ideas within a multidisciplinary group of scientists who are specialists in their fields of research. It is obvious that a two-day symposium covering such a wide range of topics could only highlight certain aspects of the latest research on the cardiovascular system. The book is divided into three sections. The first part deals with arterial hemodynamics. Emphasized are the mechanical properties of the arterial wall in particular the smooth muscle fundamental parameters for the description of pulse wave propagation such as attenuation, phase velocity and reflection of pulse waves. Furthermore, new methods for recording arterial diameters and the latest results in determining pulsatile pressure and pulsatile diameter of arteries in vivo as well as from calculations based on models of the arterial system are presented. The

second part deals with applications of the control theory and the principles of optimality of the cardiovascular system in toto and of single regions of this system Contributions to research in the field of regulation of blood volume and of regional hemodynamics are also presented The third part covers problems of interaction of the heart and the arterial system including fluid mechanics of the aortic valves and the coronary blood flow under normal and pathologic conditions Proceedings of the West Virginia Academy of Science West Virginia Academy of Science,1926 List of members in v 2
