Modulating Gene Expression By Antisense Oligonucleotides To Understand Neural Functioning:

Modulating Gene Expression by Antisense Oligonucleotides to Understand Neural Functioning Margaret M. McCarthy, 2012-12-06 When first introduced antisense oligonucleotides were hailed as the long awaited magic bullet that would provide an unprecedented level of specificity in controlling gene expression Following this initial enthusiasm antisense oligonucleotides have been maligned as nonspecific toxic and essentially useless However application of antisense oligonucleotide technology in the nervous system stands apart from the use of this technique in peripheral systems largely because of its enormous success The source of this success remains a matter of some controversy Modulating Gene Expression by Antisense Oligonucleotides to Understand Neural Functioning addresses the origins of that controversy and determines whether the nervous system is a privileged site for antisense oligonucleotide action and not subject to the same vagaries and pitfalls as non neuronal systems Modulating Gene Expression by Antisense Oligonucleotides to Understand Neural Functioning contains chapters by experts in the field that focus on the use of this technique in a variety of behavioral systems as well as rapid and nonspecific effects and the uptake and metabolism of antisense oligonucleotides by the nervous system Modulating Gene Expression by Antisense Oligonucleotides to Understand Neural Functioning features experts in the field reporting on the use of antisense oligonucleotide technology in a variety of behavioral systems including pain control circadian rhythms ingestion and control of water balance and reproductive behaviors the novel use of plasmids to express antisense RNA in the nervous system the biodistribution and metabolism of antisense oligonucleotides in the nervous system rapid and unusual effects and non specific effects

Antisense Technology, Part B: Applications, 1999-11-10 Antisense technology is the ability to manipulate gene expression within mammalian cells providing powerful experimental approaches for the study of gene function and gene regulation For example methods which inhibit gene expression permit studies probing the normal function of a specific product within a cell Such methodology can be used in many disciplines such as pharmacology oncology genetics cell biology developmental biology molecular biology biochemistry and neurosciences This volume will be a truly important tool in biomedically oriented research The critically acclaimed laboratory standard for more than forty years Methods in Enzymology is one of the most highly respected publications in the field of biochemistry Since 1955 each volume has been eagerly awaited frequently consulted and praised by researchers and reviewers alike Now with more than 300 volumes all of them still in print the series contains much material still relevant today truly an essential publication for researchers in all fields of life sciences

Triple Helix Forming Oligonucleotides Claude Malvy, Annick Harel-Bellan, Linda L. Pritchard, 2012-12-06 Sequence specific DNA binding ligands amongst which triple helix forming oligonucleotides are the most efficient as yet represent promising tools in a number of fields One of their most promising applications is as antiviral tools they can specifically target a viral gene even if it is integrated into the host genome and be used to specifically inactivate the viral gene or even destroy the cells harboring this gene However from science fiction to

science there remains a gap and we are at the moment on the threshold of this fascinating field Triple Helix Forming Oligonucleotides considers the different aspects of the design and improvement current or future of these molecules and their structural analysis as well as their applications with special emphasis on the attempts to obtain biological effects of these potentially important tools What emerges is that the current state of the research is encouraging and that these molecules are already useful in some biotechnology applications Manual of Antisense Methodology Gunther

Hartmann,Stefan Endres,2012-12-06 In the past few years antisense methodology has moved from in vitro studies to in vivo studies and first human trials While the basic concept of antisense technology is simple the methodological problems associated with its use are numerous and complex Antisense based methods have proven to be a field of research where careful attention to experimental protocols and appropriate controls is necessary The Manual of Antisense Methodology emphasizes the application of antisense oligonucleotides and is a guide for the identification of antisense and non antisense effects in different experimental settings The work is organized into three sections antisense application in vitro antisense application in vivo animal models and finally clinical antisense studies Where at all possible the methods are described in sufficient detail to allow reproduction of a given experiment The Manual of Antisense Methodology will be of interest to researchers in immunology cancer research pharmacology and internal medicine and physicians conducting clinical studies in these fields **Applications of Antisense Therapies to Restenosis** LeRoy E. Rabbani,2012-12-06 Restenosis the

proliferation of smooth muscle cells SMC that line blood vessels often follows angioplasty Despite advances in cardiology restenosis continues to affect up to 40% of the over 500 000 patients who undergo angioplasty each year Applications of Antisense Therapies to Restenosis is the first volume to address the potential of using antisense therapies to inhibit the restenosis that occurs after percutaneous transluminal angioplasty and coronary stenting The work critically examines the application of various antisense therapies for inhibiting restenosis **Behavioral Endocrinology** Jill B. Neurosciences - From Molecule to Behavior: a university textbook C. Giovanni Galizia,Pierre-Marie Lledo,2013-07-08

Neurosciences a comprehensive approach This textbook covers neuroscience from cellular and molecular mechanisms to behavior and cognitive processing We also address evolution of the nervous system computational neuroscience the history of neuroscience as a discipline and neurophilosophy to name but a few The book provides the newest state of the art knowledge about neuroscience from across the animal kingdom with particular emphasis on model species commonly used in neuroscience labs across the world mouse zebra fish fruit fly honeybee and nematode worm We aim at university students of neuroscience psychology biological sciences and medical sciences but also computer scientists philosophers or anybody interested in understanding how brains work

Operative Neuromodulation Damianos E. Sakas, Brian Simpson, Elliot S. Krames, 2007-05-27 This is the first part in a two volume work on neuromodulation It describes techniques and procedures applied in internal contact with non neural tissues surrounding the nervous system dura or cerebrospinal fluid as in the case of epidural stimulation for pain or intrathecal drug application for the treatment of spasticity and pain In addition coverage also includes a special section on non invasive functional neuroprosthetic systems

Come as You R(NA): Post-transcriptional Regulation Will Do the Rest Oriane Mauger, Michael A. Kiebler, Clémence Bernard, 2025-08-27 Recent studies have highlighted the discrepancy between transcriptional regulation and protein levels in the brain thus placing post transcriptional mechanisms at the center of neuronal function RNA molecules are highly versatile and regulated at multiple stages of their lifecycle This significantly affects both coding and non coding transcript sequences asymmetric RNA localization in specific compartments RNA stability and resulting protein production We are beginning to understand the many RNA regulatory pathways in progenitors developing and mature neurons and their links with neurological disorders It all starts in the nucleus with RNA processing regulation intimately coupled with transcription For instance alternative processing such as microexon inclusion cryptic exons intron retention or back splicing reactions and resulting circular RNAs impacts the spatio temporal dynamics of transcripts and amplifies the proteome In the cytoplasm an increasing number of pathways are now identified to control translation such as the phase transition of ribonucleoprotein condensates to fine tune protein production in particular at specific synapses Advances in omics technologies have massively accelerated our strive to understand the many contributions of post transcriptional mechanisms in the central nervous system This has highlighted the specificity of these processes at different developmental stages in different cell and synapse types in response to different stimuli and their substantial alterations in neurodevelopmental and neurodegenerative disorders Many of these post transcriptional regulatory steps are well conserved throughout evolution Others have emerged exclusively in primates supporting the compelling hypothesis that post transcriptional mechanisms could play a pivotal role in species evolution This now paves the way to investigate their functional relevance for neuronal circuits and higher cognitive functions The revolution of CRISPR and the thorough manipulation of gene sub sequences without interfering with global gene expression provides a means to directly address the role of post transcriptional events on neuron development and plasticity We

anticipate that a better understanding of the underlying principles of these mechanisms will provide unprecedented insight into various brain functions This Research Topic aims to highlight the recent progress on post transcriptional processes involved in the development function and plasticity of brain cells We welcome Perspective and Review Articles Themes to be addressed in this Topic include but are not limited to diverse forms of RNA processing e g alternative splicing RNA editing chemical modifications and their functional relevance roles of non coding RNAs e g microRNAs long non coding RNAs circular RNAs mechanisms of RNA export transport and localization mRNA translational control and its local regulation in specific subcellular compartments ribonucleoprotein condensates for translational control technical challenges for single cell and single synapse characterization of post transcriptional programs post transcriptional regulation across species *Book Review Index* ,2000 Every 3rd issue is a quarterly cumulation **Brinkman's catalogus van boeken en tijdschriften** ,2001 With 1901 1910 1956 1960 Repertorium is bound Brinkman s Titel catalogus van de gedurende 1901 1910 1956 1960 Title varies slightly Brinkman's cumulatieve catalogus van boeken ,2000 Voorts een alfabetische lijst van Nederlandsche boeken in Belgi uitgegeven **Gene Silencing and Editing Strategies for Neurodegenerative Diseases** Clévio Nóbrega,Sandro Alves,2018-08-31
