Modulation Of Mhc Antigen Expression And Disease:

Modulation of MHC Antigen Expression and Disease G. Eric Blair, Craig R. Pringle, D. John Maudsley, 1995-11-09 The major histocompatibility complex MHC genes are involved in the immune system's response to tumor and infected cells and in generating an immune response This book brings together basic aspects of the regulation of MHC antigens with important clinical applications in viral infection viral oncology cancer biology and autoimmunity There is a strong emphasis on situations where MHC expression is modulated either stimulated or repressed The book's major themes are the mechanisms of MHC expression explored at several levels including the transcription and translation of MHC genes and the insertion of MHC protein molecules into plasma membranes the effect of cytokines on MHC expression both in the etiology of certain diseases and in possible immunotherapeutic approaches to disease and the use of gene therapy to modify MHC expression in cancer cells and thereby cause tumor rejection This book will be valuable to researchers and clinicians in molecular biology immunology oncology and virology

Neuromuscular Diseases: From Basic Mechanisms to Clinical Management F. Deymeer, Julien Bogousslavsky, 2000-07 In the last few decades important advances have changed the face of neuromuscular diseases Once stagnant with hardly any prospect of therapy the field has recently witnessed continuous progress thanks to genetic discoveries which have opened a new era with potential treatment modalities and to immunological developments which have turned around the grave outcome of some diseases Scientific work has resulted in deeper insights into the pathogenesis of neuromuscular diseases and has at the same time made fundamental changes in their classification necessary This book reviews the electrophysiological genetic and immunological bases of some of the major neuromuscular diseases and evaluates their importance pertaining to the clinical management of the patients Included are up to date topics such as gene therapy myoblast transfer and new drug trials Written by experts in their own fields this volume will not only be of great value to neurologists and neuroscientists but also to geneticists immunologists and physiologists

Inflammatory Bowel Diseases B. R. Bistrian, J. A. Walker-Smith, 1999-07 Among inflammatory bowel diseases Crohn's disease and ulcerative colitis are of particular importance to gastroenterologists treating both children and adults Although the etiology of these diseases is still largely unknown knowledge of their immunopathology is increasing Typically proinflammatory cytokine production is abnormal and particularly in Crohn's disease the consequent inflammation is responsive to nutritional intervention or anticytokine therapy The contributions in this volume focus on nutritional therapy which is important for both the repletion of associated protein energy malnutrition and for modulation of the inflammatory response Highlights include the growing role of enteral nutrition as primary therapy in pediatric practice and investigations into the ideal diet composition including type of formula polymeric protein hydrolysate or amino acid

Furthermore the pro and anti inflammatory effects of omega 6 and omega 3 fatty acids respectively and their impact on clinical response receive special attention This publication offers a wealth of information for gastroenterologists dealing with both adults and children as well as for clinical and research nutritionists clinical immunologists and others interested in dietetic therapy *Immunopathology of Chronic Bacterial and Viral Diseases Prevalent in Latin America* Leopoldo Santos-Argumedo,Luis F. Garcia,Rosana Pelayo,2020-06-22 We acknowledge the initiation and support of this Research Topic by the International Union of Immunological Societies IUIS Prof Leopoldo Santos Argumedo is the President of the Latin American Association of Immunology ALAI Prof Rosana Pelayo is the President of Sociedad Mexicana De Inmunologia SMI and Prof Luis Garcia is a former ALAI President **Biomedical Index to PHS-supported Research** ,1987 **Genetics of Immunological Diseases** Beverly Mock,Michael Potter,2013-03-09 The development of innovative molecular techniques such as pulse field gel electrophoresis cDNA subtraction libraries and chromosome hopping libraries coupled with the increasing popularity in the prospect of sequencing mammalian genomes has triggered a resurgence of interest in finding and characterizing genes that play a role in modifying immune processes and diseases Genetically defined strains of mice e g inbred strains and recently derived stocks of wild mice provide ideal models for examining the genetic control of diseases as a result of their syntenic relationship with man in genetic composition as well as linkage conservation Due to the relative ease of producing a specific genotype via appropriate breeding schedules murine models may provide the only hope for unravelling those complex disease processes under multigenic control This issue of CTMI is a collection of papers on the characterization and mapping of genes involved in mutations and dysregulated immune responses which produce disease phenotypes These papers were presented at a workshop which was devoted to examining reverse genetic approaches at localizing cloning and characterizing genes involved in a variety of developmental autoimmune neoplastic and infectious disease processes In the first of three sections a series of papers outline the most currently used methods of mapping and isolating genes whose products are unknown The papers following are devoted to specific gene systems whose dysregulation is likely to produce mutant or disease phenotypes *The Blood-Brain Barrier in Health and Disease, Volume One* Katerina Dorovini-Zis,2015-06-23 Located at the interface between blood and the brain the blood brain barrier is a dynamic permeability barrier formed by a continuous layer of specialized endothelial cells endowed with important permeability transport and regulatory functions that both protect the internal milieu of the brain and allow essential nutrients to be transported into *Immunology of Renal Disease* C.D. Pusey,2012-12-06 Although it has been appreciated for many years that immune processes underlie most types of glomerulonephritis it is the recent explosion in knowledge of cellular and molecular immunology that has prompted another book on the subject The understanding of the mechanisms involved in renal injury requires the integration of information from in vitro cell culture systems experimental models of disease and clinical studies This volume draws on all of these sources in an attempt to explain current concepts of nephritis Increased

emphasis is placed on autoimmune processes as opposed to the deposition of circulating immune complexes although it will be apparent that these may overlap in the area of in situ immune complex formation Of central importance in autoimmunity is the relationship between antigen pre senting cells including B cells expressing MHC class II molecules autoan tigenic peptides T helper lymphocytes and various effector cells The mechanisms by which the immune system may lead to tissue injury are also becoming better understood and consideration is given to the role of inflam matory cells the complement proteins and soluble factors such as cytokines and eicosanoids

Brown,2013-03-09 Interest in the coronaviruses has never been greater Their economic impact is considerable as they infect humans livestock poultry and companion animals Murine hepatitis virus MHV infection of the mouse and rat central nervous systems are the subject of intense study these investigations are providing insights into the potential role of viruses in human neurological diseases and more generally into mechanisms causing neurological damage The single stranded positive sense RNA genomes of two species of these enveloped viruses IBV and MHV have been cloned completely and one of them IBV sequenced in its entirety revealing a genome size of some 27000 nucleotides This has made possible more incisive investigations into the nature of those polypeptides encoded by more than half of the genome which are likely to contribute in the main to RNA polymerase replicase activity Intriguingly ribosomal frameshifting is exhibited within the mRNA coding for these polypeptides The cloning sequencing phase of coronavirology for which the 1980 s will be partly remembered has provided a sound framework for furthex studies of the virus structural proteins and also some provocative insights relevant to these studies The large spike glycoprotein s responsible for membrane fusion and bearing important antigenic sites varies amazingly in length and composition both within as well as between coronavirus species Receptors on host cells have been identified The integral membrane glycoprotein M has been shown to use internal hydrophobic sequences to direct translocation within membranes

Targets of Treatment in Chronic Inflammatory Bowel Diseases H. Herfarth,B.G. Feagan,U.R. Fölsch,J. Schölmerich,M.H. Vatn,M. Zeitz,2003-07-31 The first gene responsible for Crohn s disease has now been identified and the pathophysiological understanding of inflammatory bowel disease as well as its practical treatment have made much progress in recent years Thus it is obviously important to consider the targets and the aims of treatment in context The Falk Symposium No 131 Part II of the Gastroenterology Week Freiburg 2002 held in October 2002 in Freiburg Germany in its first part was dedicated to newly defined and partly alternative therapeutic targets In addition an attempt was made to learn from experts from other fields such as pneumology or dermatology The second part was dedicated to the aims of treatment in daily practice Aside from general treatment aims such as amelioration of symptoms pre conditions of treatment the view of the patients and aspects of life quality were dealt with This volume is the proceedings of the symposium and is important reading for both clinicians and basic scientists

Infectious Diseases in Immunocompromised Hosts Vassil St. Georgiev,1997-12-29 Because of limited access to medical

libraries and medical journals the majority of clinicians may find it difficult to keep informed on the latest developments in drug manufacture and treatment of infectious diseases in immunocompromised patients This new handbook strives to fulfill the need for information in this area of medicine This is the first book on drug development and treatment of infectious diseases in immunocompromised hosts It integrates both results from large scale clinical trials and single cases as well as small groups of patients It covers bacterial viral parasitic and fungal infections including a wide array of diseases Infectious Diseases in Immunocompromised Hosts encompasses not only opportunistic infections associated exclusively with immunocompromised patients but also common infections that become life threatening for immunosuppressed individuals

Antigen Processing and Recognition James McCluskey,1991-09-03 This book provides a state of the art review of the processing presentation and subsequent recognition of antigens by T cells Topics discussed include the structure of MHC molecules the nature and specificity of human class II molecule interactions with peptide antigens the class II invariant chain antigen processing and presentation by class I MHC molecules the biology of antigen processing and the presentation and role of accessory molecules in T cell recognition Other chapters feature discussions about the T cell allorecognition of MHC molecules the recognition of minor antigens and the concept of superantigens Color plates demonstrate the three dimensional structure of MHC molecules and peptide antigen interaction with MHC molecules Diagrams illustrate antigen presentation pathways T cell receptor MHC interaction and accessory molecule interactions Antigen Processing and Recognition will be a valuable addition to the libraries of students and teachers of immunology as well as cell biologists who are looking for a unified view of this rapidly expanding subject *Biomedical Index to PHS-supported Research: pt.
