Real Enriques Surfaces Alexander Degtyarev, Ilia Itenberg, Viatcheslav Kharlamov, 2007-05-06 This is the first attempt of a systematic study of real Enriques surfaces culminating in their classification up to deformation Simple explicit topological invariants are elaborated for identifying the deformation classes of real Enriques surfaces Some of these are new and can be applied to other classes of surfaces or higher dimensional varieties Intended for researchers and graduate students in real algebraic geometry it may also interest others who want to become familiar with the field and its techniques The study relies on topology of involutions arithmetics of integral quadratic forms algebraic geometry of surfaces and the hyperkähler structure of K3 surfaces A comprehensive summary of the necessary results and techniques from each of these fields is included Some results are developed further e.g. a detailed study of lattices with a pair of commuting involutions and a certain class of rational complex surfaces

Topological Modular Forms Christopher L. Douglas, John Francis, André G. Henriques, Michael A. Hill, 2014-12-04 The theory of topological modular forms is an intricate blend of classical algebraic modular forms and stable homotopy groups of spheres The construction of this theory combines an algebro-geometric perspective on elliptic curves over finite fields with techniques from algebraic topology particularly stable homotopy theory It has applications to and connections with manifold topology number theory and string theory This book provides a careful accessible introduction to topological modular forms After a brief history and an extended overview of the subject the book proper commences with an exposition of classical aspects of elliptic cohomology including background material on elliptic curves and modular forms a description of the moduli stack of elliptic curves an explanation of the exact functor theorem for constructing cohomology theories and an exploration of sheaves in stable homotopy theory There follows a treatment of more specialized topics including localization

of spectra the deformation theory of formal groups and Goerss Hopkins obstruction theory for multiplicative structures on spectra The book then proceeds to more advanced material including discussions of the string orientation the sheaf of spectra on the moduli stack of elliptic curves the homotopy of topological modular forms and an extensive account of the construction of the spectrum of topological modular forms The book concludes with the three original pioneering and enormously influential manuscripts on the subject by Hopkins Miller and Mahowald
