Fondation Le Corbusier

Modulor I And II:

The Modulor and Modulor 2 Fondation Le Corbusier, 2015-04-24 In the years 1942 to 1948 Le Corbusier developed a system of measurements which became known as Modulor Based on the Golden Section and Fibonacci numbers and also using the physical dimensions of the average human Modulor is a sequence of measurements which Le Corbusier used to achieve harmony in his architectural compositions Le Modulor was published in 1950 and after meeting with success Le Corbusier went on to publish Modulor 2 in 1955 In many of Le Corbusier s most notable buildings including the Chapel at Ronchamp and the Unit d habitation evidence of his Modulor system can be seen These two volumes form an important and integral part of Le Corbusier s theoretical writings **Modulor I and II** Le Corbusier, 1980 *The Modulor and Modulor 2* Le Corbusier, Le Corbusier Staff, 1980 **The Modulor and Modulor 2** Le Corbusier, 2004-06-02 Le Corbusier s Modulor a fundamental work in the history of architecture as a beautiful facsimile edition **Xenakis** James Harley, 2004-08-02 For over forty years Iannis Xenakis has been one of the major figures in contemporary music this is the first ever study of his music published in English *The Projective Cast* Robin Evans, 2000-08-25 Robin Evans recasts the idea of the relationship between geometry and architecture drawing on mathematics engineering art history and aesthetics to uncover processes in the imagining and realizing of architectural form Anyone reviewing the history of architectural theory Robin Evans observes would have to conclude that architects do not produce geometry but rather consume it In this long awaited book completed shortly before its author s death Evans recasts the idea of the relationship between geometry and architecture drawing on mathematics engineering art history and aesthetics to uncover processes in the imagining and realizing of architectural form He shows that geometry does not always play a stolid and dormant role but in fact may be an active agent in the links between thinking and imagination imagination and drawing drawing and building He suggests a theory of architecture that is based on the many transactions between architecture and geometry as evidenced in individual buildings largely in Europe from the fifteenth to the twentieth century From the Henry VII chapel at Westminster Abbey to Le Corbusier s Ronchamp from Raphael s S Eligio and the work of Piero della Francesca and Philibert Delorme to Guarino Guarini and the painters of cubism Evans explores the geometries involved asking whether they are in fact the stable underpinnings of the creative intuitive or rhetorical aspects of architecture In particular he concentrates on the history of architectural projection the geometry of vision that has become an internalized and pervasive pictorial method of construction and that until now has played only a small part in the development of architectural theory Evans describes the ambivalent role that pictures play in architecture and urges resistance to the idea that pictures provide all that architects need suggesting that there is much more within the scope of the architect s vision of a project than what can be drawn He defines the different fields of projective transmission that concern architecture and investigates the ambiguities of projection and the interaction of imagination with projection and its metaphors **Architecture: Form, Space, and Order** Francis D. K. Ching, 2023-04-11

ARCHITECTURE THE GOLD STANDARD IN INTRODUCTORY ARCHITECTURE TEXTS FULLY UPDATED TO REFLECT THE LATEST DEVELOPMENTS IN THE FIELD For more than forty years the beautifully illustrated Architecture Form Space and Order has served as the classic introduction to the basic vocabulary of architectural design In this fifth edition more recent additions to the architectural panoply illustrate how contemporary digital and building technologies have influenced the development of architectural forms and spaces and how architectural siting and design have responded to the call for more environmentally responsible buildings It is designed to encourage critical thought and to promote a more evocative understanding of architecture The fifth edition is updated with many new urban design and building precedents from a diverse range of cultural and geographic areas New content focuses on the latest technology and trends in structure construction materials and sustainability Includes more than 800 illustrations many hand drawn which demonstrate the foundations and concepts every architect must master Architecture Form Space and Order distills complex concepts of design into a clear focus and brings difficult abstractions to life It explains form and space in relation to light view openings and enclosures and explores the organization of space and the elements and relationships of circulation as well as proportion and scale In addition the text s detailed illustrations demonstrate the concepts presented and reveal the relationships between fundamental elements of architecture through the ages and across cultures , *A New Latin-English School-Lexico on the basis of the Latin-German Lexicon of Dr. C. F. Ingerslev* George Richard Crooks, Alexander Jacob Schem, 2021-10-27 Reprint of the original first published in 1867 **Architecture After Deleuze and Guattari** Chris L. Smith, 2023-05-04 This study illuminates the complex interplay between Deleuze and Guattari s philosophy and architecture Presenting their wide ranging impact on late 20th and 21st century architecture each chapter focuses on a core Deleuzian Guattarian philosophical concept and one key work of architecture which evokes contorts or extends it Challenging the idea that a concept or theory defines and then produces the physical work and not vice versa Chris L Smith positions the relationship between Deleuze and Guattari s philosophy and the field of architecture as one that is mutually substantiating and constitutive In this framework modes of architectural production and experimentation become inextricable from the conceptual territories defined by these two key thinkers producing a rigorous discussion of theoretical practical and experimental engagements with their ideas **The Architecture of the Facade** Randall Korman, 2022-12-30 The Architecture of the Facade provides a comprehensive study of the facade as both a physical and cultural artifact highlighting its significance as a critical component of the civic realm and arguing for the restoration of the art of the facade as both a subject of study within academia and an aspiration within the profession at large As the principal surface of mediation contextualization and representation the facade carries the lion s share of responsibility for containing the internal environment and confronting the outer world And yet in recent decades the very question of what exactly a facade is has been raised by the dramatic changes in building technology advances of parametric design and the ubiquity of autonomous

buildings The Architecture of the Facade addresses these and other related issues The book is organized into 12 chapters with each chapter focusing on a particular aspect of the phenomenon of the facade such as those of wall the frame transparency and the role of the facade in civic space Korman also discusses proportional systems the language of composition the role of precedent the importance of context and much more Over 350 photos and diagrams provide readers with a variety of examples of artful facades throughout history Online teaching resources that accompany this book include a course syllabus a glossary and a Pinterest tack board of facades This book will be of great interest to students in architecture studios as well as instructors and professional architects interested in facade design *Proceedings of the 2nd International and Interdisciplinary Conference on Image and Imagination* Enrico Cicalò,2020-03-17 This book gathers peer reviewed papers presented at the 1st International and Interdisciplinary Conference on Image and Imagination IMG 2019 held in Alghero Italy in July 2019 Highlighting interdisciplinary and multi disciplinary research concerning graphics science and education the papers address theoretical research as well as applications including education in several fields of science technology and art Mainly focusing on graphics for communication visualization description and storytelling and for learning and thought construction the book provides architects engineers computer scientists and designers with the latest advances in the field particularly in the context of science arts and education **Building the Post-war World** Nicholas

Bullock,2002 Building the Post War World offers for the first time an overall account of Modern Architecture in the decade after the Second World War **Le Corbusier in Detail** Flora Samuel,2007-08-31 This is the first book to give such close

attention to Le Corbusier s approach to the making of buildings It illustrates the ways in which Le Corbusier s details were expressive of his overall philosophical intentions It is not a construction book in the usual sense rather it focusses on the meaning of detail on the ways in which detail informs the overall architectural narrative of a building Well illustrated and containing several specially prepared scaled drawings it acts as timely reminder to both students and architects of the possibilities inherent in the most small scale tectonic gestures Le Corbusier & Pierre Jeanneret - Restoration of the Clarté Building, Geneva Office du patrimoine et des sites,2016-10-24 The book describes the story of Clart Le Corbusier s first

apartment building continuing the narrative into the 21st century The steel skeleton building completed in Geneva in 1930 1932 is a prototype of the Moderne style and a precursor of the Unit d Habitation The building was neglected for many decades and not listed as a historic building until the 1990s In 2007 the external envelope was repaired as the first step followed by refurbishment of the interior in which building preservation requirements were taken into account in an exemplary manner The building log book by the architects and structural engineers is illustrated with numerous new and historic drawings and photographs and has been supplemented with an account of the building s history The renovated building is presented in large photographs Modulor 2. Modulor 2, 1958-Let the User Speak Next. Continuation of 'The Modulor, ' 1948 by Le Corbusier. (Translated by Peter de Francia and Anna Bostock.) With Illustrations. Le Corbusier,Anna

Bostock, Peter De Francia, 1958 Experiments with Body Agent Architecture Alessandro Ayuso, 2022-03-31 *Experiments with Body Agent Architecture* puts forward the notion of body agents non ideal animate and highly specific figures integrated with design to enact particular notions of embodied subjectivity in architecture Body agents present opportunities for architects to increase imaginative and empathic qualities in their designs particularly amidst a posthuman condition Beginning with narrative writing from the viewpoint of a body agent an estranged quattrocento spiritello who finds himself uncomfortably inhabiting a digital milieu or as the spiritello calls it Il Regno Digitale the book combines speculative historical fiction and original design experiments It focuses on the process of creating the multi media design experiments moving from the design of the body itself as an original prosthetic to architectural proposals emanating from the body A fragmented history of the figure in architecture is charted and woven into the designs with chapters examining Michelangelo's enigmatic figures in his drawings for the New Sacristy in the early sixteenth century Gian Lorenzo Bernini's physically ephemeral putti adorning chapels and churches in the seventeenth century and Austrian artist architect Walter Pichler's personal and prescient figures of the twentieth century *Italian Imprints on Twentieth-Century Architecture* Denise Costanzo, Andrew Leach, 2022-05-19 Italian architecture has long exerted a special influence on the evolution of architectural ideas elsewhere from the Beaux Arts academy's veneration of Rome to modernist and postmodern interest in Renaissance proportion Baroque space and Mannerist ambiguity This book critically examines this enduring phenomenon exploring the privileged position of Italian architects architecture and cities in the architectural culture of the past century Questioning the deep rooted myth of Italy within architectural history the book presents case studies of Italy's powerful yet problematic position in 20th century architectural ideologies at a time when established Eurocentric narratives are rightly being challenged It reconciles the privileged position of Italian architecture and design with the imperative to write history across a more global diverse heterogenous cultural geography Twenty chapters from distinguished international scholars cover subjects and architects ranging from Alberti to Gio Ponti Aldo Rossi Manfredo Tafuri Vittorio Gregotti cities from Rome and Venice to Milan and an array of international architects movements and architectural ideas influenced by Italy The chapters each question where how and why the disciplinary edifice of 20th century architecture its canon of built visual textual and conceptual works relied on Italian foundations examining where and how those foundations have become insecure Indispensable for students and scholars of both Italian and global architectural history *Italian Imprints on Twentieth Century Architecture* provides an opportunity to consider the architectural and urban landscape of Italy from substantially new points of view Blueprints Marcus du Sautoy, 2025-09-09 A stunning book a thrilling read Peter Frankopan that reveals how creative people can harness the profound and productive relationship between mathematics and the arts When Shakespeare has the Three Witches cast Macbeth's lot he uses something very weird to do it not simply eye of newt and toe of frog but the number seven And when Hamlet claims To be or not to be that is the question Shakespeare reaches for eleven For Shakespeare prime numbers were

magical And he is not alone As Marcus du Sautoy showcases in Blueprints creativity is inseparable from mathematics The designs of Le Corbusier and Leonardo the music of Glass Bach and Debussy the wild visions of Dali the choreography of Laban the animation of Pixar all are shot through with mathematics from primes and fractals to the weirder worlds of Hamiltonian cycles and hyperbolic geometry And Du Sautoy argues that the relationship runs both ways Just as mathematics inspires new art the artistic mindset is a necessity for discovering new mathematics Blueprints will expand your mind but more importantly it shows how to ignite your imagination Anyone who wants to create needs this book **A copious and critical Latin-English dictionary** Peter Bullions,1862
