**Fusion** Moebius,1995      *The Self-evolving Cosmos* Steven M. Rosen,2008 This unique book offers an original way of thinking about two of the most significant problems confronting modern theoretical physics the unification of the forces of nature and the evolution of the universe In bringing out the inadequacies of the prevailing approach to these questions the author demonstrates the need for more than just a new theory The meanings of space and time themselves must be radically rethought which requires a whole new philosophical foundation To this end the book turns to the phenomenological writings of Maurice Merleau Ponty and Martin Heidegger Their insights into space and time bring the natural world to life in a manner well suited to the dynamic phenomena of contemporary physics In aligning continental thought with problems in physics and cosmology the book makes use of topology Phenomenological intuitions about space and time are systematically fleshed out via an unconventional and innovative approach to this qualitative branch of mathematics The author s pioneering work in topological phenomenology is applied to such topics as quantum gravity cosmogony symmetry spin vorticity dimension theory Kaluza Klein and string theories fermion boson interrelatedness hypernumbers and the mind matter interface

**Topologies of the Flesh** Steven M. Rosen, 2006 The concept of flesh in philosophical terms derives from the writings of Maurice Merleau Ponty This was the word he used to name the concrete realm of sentient bodies and life processes that has been eclipsed by the abstractions of science technology and modern culture Topology to conventional understanding is the branch of mathematics that concerns itself with the properties of geometric figures that stay the same when the figures are stretched or deformed Topologies of the Flesh is an original blend of continental thought and mathematical imagination Steven M Rosen opens up a new area of philosophical inquiry topological phenomenology Through his unique application of qualitative mathematics he extends the approaches of Merleau Ponty and Heidegger so as to offer a detailed exploration of previously uncharted dimensions of human experience and the natural world Rosen's unprecedented marriage of topology and phenomenology is motivated by the desire to help overcome the pervasive dualism of contemporary philosophy and Western culture at large To carry this to completion he must address his own dualistic stance as author Challenging the author's traditional posture of detachment and anonymity Rosen makes his presence vividly felt in his final chapter and his philosophical analysis is transformed into a living reality Smith's
