Molecular and Cellular Aspects of Reproduction, 1986-10-31 *Molecular and Cellular Aspects of Reproduction* Dharam S. Dhindsa, Om P. Bahl, 2013-11-10 Recently considerable attention has been focused on studies of membrane structure and function involvement of cell surface components in intercellular interaction in translocation of ligands and receptors across cell membranes and in the immunological properties of cells and gene expression and regulation These investigations have led to the development of powerful technical tools which can be of immense value in the study of animal and human reproduction The investigations of problems such as gamete interaction fertilization embryo implantation and development have reached a stage where further meaningful progress in their understanding does not seem likely unless the conventional approaches are coupled with more modern molecular and cellular techniques Furthermore it is only through such basic studies that potential means of fertility regulation will emerge The various physiological events in animal reproduction such as fertilization and implantation essentially involve an interaction between specific cell membrane components Similarly embryogenesis involves the expression and regulation of genes at various stages of development Therefore the entire Workshop was specifically devoted to two topics 1 Structure function and biosynthesis of membrane components and 2 Gene expression and regulation as related to animal reproduction The presentations relating to each topic are presented in separate sections in this book

Molecular and Cellular Aspects of Basement Membranes David H Rohrbach, Rupert Timpl, 1993-03-23 *Molecular and Cellular Aspects of Basement Membranes* reviews the knowledge about the molecular and cellular aspects of basement membranes This book focuses on the composition of basement membranes and their organization in extracellular matrices and presents a structural analysis of the various components of the basement membrane The importance of basement membranes with respect to cell matrix interactions differentiation and pathology is also considered This text is organized into three sections and is comprised of 20 chapters It begins with historical perspectives and an overview of the extracellular matrix in general and the basement membrane in particular The discussion then turns to the organization of basement membrane components into a three dimensional and functional matrix along with the unique characteristics of basement membranes in skin nerve and kidney The reader is also introduced to the specificity of particular basement membranes in particular histological sites the molecular characteristics of basement membrane collagens laminins and proteoglycans and the interaction of specific peptide domains of basement membrane components with cell surface receptors Finally the book explains how subtle changes in basement membrane composition or protein structure can cause dramatic pathology This book will be of value to cell biologists molecular biologists biochemists and pathologists

Rapid advances have taken place in various aspects of reproductive biology during the last decade These advances have centered around several organ systems that comprise the reproductive system and encompass molecular events and structure function relationships It becomes important to review these advances in knowledge at periodic intervals with respect to feedback systems and regulatory loops that control reproductive processes in vivo Towards this end a workshop entitled Functional Correlates of Hormone Receptors in Reproduction sponsored by the National Institute of Child Health and Human Development and the Reproductive Biology Study Section of the Division of Research Grants National Institutes of Health was held in October 1980 The proceedings of the workshop were published by Elsevier Biomedical New York This workshop was followed by two workshops sponsored by the Reproductive Biology Study Section of the Division of Research Grants National Institutes of Health entitled Role of Peptides and Proteins in Control of Reproduction in February 1982 and published by Elsevier Biomedical and Molecular and Cellular Aspects of Reproduction in October 1985 and published by Plenum Press It was therefore timely to review the current state of knowledge regarding the regulation of ovarian and testicular function by bringing together scientists working in separate and discrete aspects of reproduction to review the functional implications of their research on the regulation of function within the same tissue and also in relationship to feedback systems and regulatory loops with other tissues

The Cnidaria, Past, Present and Future Stefano Goffredo,Zvy Dubinsky,2016-09-07 This volume presents a broad panorama of the current status of research of invertebrate animals considered belonging to the phylum Cnidaria such as hydra jellyfish sea anemone and coral In this book the Cnidarians are traced from the Earth s primordial oceans to their response to the warming and acidifying oceans Due to the role of corals in the carbon and calcium cycles various aspects of cnidarian calcification are discussed The relation of the Cnidaria with Mankind is approached in accordance with the Editors philosophy of bridging the artificial schism between science arts and Humanities Cnidarians encounters with humans result in a broad spectrum of medical emergencies that are reviewed The final section of the volume is devoted to the role of Hydra and Medusa in mythology and art
