The Retina and Its Disorders Joseph Besharse, Dean Bok, 2011-04-25 This selection of articles from the Encyclopedia of the Eye covering retina optics optic nerve and comparative topics constitutes the first reference for scientists post docs and graduate

students with an interest beyond standard textbook materials It covers the full spectrum of research on the retina from the basic biochemistry of how nerve cells are created to information on neurotransmitters comparisons of the structure and neuroscience of peripheral vision systems in different species and all the way through to injury repair and other clinical applications The first single volume to integrate comparative studies into a comprehensive resource on the neuroscience of the retina Chapters are carefully selected from the Encyclopedia of the Eye by one of the world s leading vision researchers The best researchers in the field provide their conclusions in the context of the latest experimental results

Photoreceptor Cell Biology and Inherited Retinal Degenerations David S. Williams,2004 This important book presents review articles on the cell biology of photoreceptor and RPE cells as well as the relationship between this cell biology and inherited photoreceptor degeneration The chapters have been written by leaders in the field The vision scientist will see this book as a review of photoreceptor and RPE cell biology and known molecular bases of many forms of retinitis pigmentosa and related retinal degeneration [Biomedical Index to PHS-supported Research](#) , **Biomedical Index to PHS-supported Research: pt. A. Subject access A-H** ,1992 [Signal Transduction in the Retina](#) Steven J. Fliesler,Oleg G. Kisselev,2007-12-26 In the twenty first century we are just beginning to understand more clearly the enormous diversity and complexity of signaling processes in the retina Integrating advances in the biochemistry cell biology physiology and physics of phototransduction Signal Transduction in the Retina presents the methodologies and experimental approaches

Neurobiology and Clinical Aspects of the Outer Retina M.B. Djamgoz,S. Archer,S. Vallergera,2012-12-06 This book deals with the cellular biology biochemistry and physiology of photoreceptors and their interactions with the second order neurons bipolar and horizontal cells The focus is upon the contributions made by these neurons to vision Thus the basic neurobiology of the outer retina is related to the visual process and visual defects that could arise from abnormalities in this part of the retina are highlighted in the first 16 chapters Since all vertebrate retinas have the same basic structure and physiological plan examples are given from a variety of species with an emphasis upon mammals extending to human vision The last four chapters approach the problem from the other end This part of the book covers a range of clinical conditions involving visual abnormalities that are due to cellular defects in the outer retina Although the contents of this book do not represent the proceedings of a conference the concept arose at an international symposium on Recent Advances in Retinal Research which was held at the International Marine Centre in Oristano Sardinia We hope that the book will give a coherent up to date review of the neurobiology and clinical aspects of the outer retina and encourage further integration of these areas Retinal neurobiology has been an intense field of investigation for several decades More recently it has seen significant advances with the application of modern techniques of cell and molecular biology **Retina** David R. Hinton,Stephen J. Ryan,Andrew P. Schachar,Charles P. Wilkinson,2005-09-21 Praised by JAMA as The most complete description of the development structure function pathophysiology and treatment of the retina and its diseases to be found anywhere this

The New Visual Neurosciences John S. Werner, Leo M. Chalupa, 2013-10-25. A comprehensive review of contemporary research in the vision sciences reflecting the rapid advances of recent years. Visual science is the model system for neuroscience; its findings are relevant to all other areas. This essential reference to contemporary visual neuroscience covers the extraordinary range of the field today, from molecules and cell assemblies to systems and therapies. It provides a state-of-the-art companion to the earlier book *The Visual Neurosciences* (MIT Press, 2003). This volume covers the dramatic advances made in the last decade, offering new topics, new authors, and new chapters. *The New Visual Neurosciences* assembles groundbreaking research written by international authorities. Many of the 112 chapters treat seminal topics not included in the earlier book. These new topics include retinal feature detection, cortical connectomics, new approaches to mid-level vision and spatiotemporal perception, the latest understanding of how multimodal integration contributes to visual perception, new theoretical work on the role of neural oscillations in information processing, and new molecular and genetic techniques for understanding visual system development. An entirely new section covers invertebrate vision, reflecting the importance of this research in understanding fundamental principles of visual processing. Another new section treats translational visual neuroscience, covering recent progress in novel treatment modalities for optic nerve disorders, macular degeneration, and retinal cell replacement. *The New Visual Neurosciences* is an indispensable reference for students, teachers, researchers, clinicians, and anyone interested in contemporary neuroscience.
