Wolfgang Guggemos

Molecular Dynamics Structures Of Soli:

Ab Initio Molecular Dynamics Dominik Marx, 2009 Ab initio molecular dynamics revolutionized the field of realistic computer simulation of complex molecular systems and processes including chemical reactions by unifying molecular dynamics and electronic structure theory This book provides the first coherent presentation of this rapidly growing field covering a vast range of methods and their applications from basic theory to advanced methods This fascinating text for graduate students and researchers contains systematic derivations of various ab initio molecular dynamics techniques in order that readers can understand and assess the merits and drawbacks of commonly used methods It also discusses the special features of the widely used Car Parrinello approach correcting various misconceptions currently found in research literature The book also contains pseudo code and program layout for typical plane wave electronic structure codes allowing newcomers to the field to understand commonly used program packages and enabling developers to improve and add new features in their code

Encyclopedia of Nonlinear Science Alwyn Scott, 2006-05-17 In 438 alphabetically arranged essays this work provides a useful overview of the core mathematical background for nonlinear science as well as its applications to key problems in ecology and biological systems chemical reaction diffusion problems geophysics economics electrical and mechanical oscillations in engineering systems lasers and nonlinear optics fluid mechanics and turbulence and condensed matter physics among others
