Electrochemistry H. R. Thirsk, 1989-03-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which

originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued

Collision- and Interaction-Induced Spectroscopy G.C. Tabisz, Murray N. Neuman, 2012-12-06 Collision or interaction induced spectroscopy refers to radiative transitions which are forbidden in free atoms or molecules but which occur in clusters of interacting atoms or molecules The most common phenomena are induced absorption in the infrared region and induced light scattering which involves inelastic scattering of visible laser light The particle interactions giving rise to the necessary induced dipole moments and polarizabilities are modelled at long range by multipole expansions at short range electron overlap and exchange mechanisms come into play Information on atomic and molecular interactions and dynamics in dense media on a picosecond timescale may be drawn from the spectra Collision induced absorption in the infrared was discovered at the University of Toronto in 1949 by Crawford Welsh and Locke who studied liquid O and N Through the 1950s and 1960s 2 2 experimental elucidation of the phenomenon particularly in gases continued and theoretical underpinnings were established In the late 1960s the related phenomenon of collision induced light scattering was first observed in compressed inert gases In 1978 an Enrico Fermi Summer School was held at Varenna Italy under the directorship of J Van Kranendonk The lectures there reviewed activity from the previous two decades during which the approach to the subject had not changed greatly In 1983 a highly successful NATO Advanced Research Workshop was held at Bonas France under the directorship of G Birnbaum An important outcome of that meeting was the demonstration of the maturity and sophistication of current experimental and theoretical techniques
