

The background of the entire cover is a scanning electron micrograph (SEM) of numerous plant pollen grains. The grains are roughly oval or elliptical in shape and exhibit a highly textured, reticulate surface with distinct ridges and grooves. They are densely packed, with some grains in sharp focus in the foreground and others blurred in the background, creating a sense of depth. The color palette is monochromatic, ranging from light grays to dark, almost black shadows, emphasizing the intricate surface details of the pollen.

Programmed Cell Death in Higher Plants E. Lam, H. Fukuda, J. Greenberg, 2011-06-27 The molecular mechanisms which determine whether the cells of a multicellular organism will live or commit suicide have become a popular field of research in biology during the last decade Cell death research in the plant field has also been expanding rapidly in the past 5 years This special volume of Plant Molecular Biology seeks to bring together examples of a diverse array of experimental approaches in a single volume From the differentiation of tracheary elements in vascular plants to the more specialized cell death model of the aleurone in cereals this volume will bring the reader up to date with the characterization of different plant model systems that are currently being studied This endeavor should complement general overviews of plant cell death mechanisms that have been published elsewhere by providing more detailed information on various aspects of this field to interested graduate students and more senior biologists alike *Plant Developmental Biology - Biotechnological Perspectives* Eng Chong Pua, Michael R. Davey, 2009-10-29 Many exciting discoveries in recent decades have contributed new knowledge to our understanding of the mechanisms that regulate various stages of plant growth and development Such information coupled with advances in cell and molecular biology is fundamental to crop improvement using biotechnological approaches Two volumes constitute the present work The first comprising 22 chapters commences with introductions relating to gene regulatory models for plant development and crop improvement particularly the use of Arabidopsis as a model plant These chapters are followed by specific topics that focus on different developmental aspects associated with vegetative and reproductive phases of the life cycle of a plant Six chapters discuss vegetative growth and development Their contents consider topics such as shoot branching bud dormancy and growth the development of roots nodules and tubers and senescence The reproductive phase of plant development is in 14 chapters that present topics such as floral organ initiation and the regulation of flowering the development of male and female gametes pollen germination and tube growth fertilization fruit development and ripening seed development dormancy germination and apomixis Male sterility and self incompatibility are also discussed [Handbook of Plant Science, 2 Volume Set](#) Keith Roberts, 2007-12-10 Plant Science like the biological sciences in general has undergone seismic shifts in the last thirty or so years Of course science is always changing and metamorphosing but these shifts have meant that modern plant science has moved away from its previous more agricultural and botanical context to become a core biological discipline in its own right However the sheer amount of information that is accumulating about plant science and the difficulty of grasping it all understanding it and evaluating it intelligently has never been harder for the new generation of plant scientists or for that matter established scientists And that is precisely why this Handbook of Plant Science has been put together Discover modern molecular plant

sciences as they link traditional disciplines Derived from the acclaimed Encyclopedia of Life Sciences Thorough reference of up to the minute reliable self contained peer reviewed articles cross referenced throughout Contains 255 articles and 48 full colour pages written by top scientists in each field The Handbook of Plant Science is an authoritative source of up to date practical information for all teachers students and researchers working in the field of plant science botany plant

biotechnology agriculture and horticulture **Regulation of Tissue pH in Plants and Animals** S. Egginton, Edwin W. Taylor, J. A. Raven, 2007-08-16 The maintenance of a stable acid base status within biological tissue is a fundamental homeostatic process in all organisms necessary to preserve the metabolic function of proteins and other macromolecules The study of acid base regulation has advanced enormously over recent decades due to the development of increasingly accurate and sensitive techniques for measuring acid base variables This volume brings together contributions from leading comparative physiologists working on factors affecting the acid base status of the internal fluids of animals and plants The result is a broad ranging authoritative and accessible review of this area together with a critical look at techniques and tools

Fluorescing World of Plant Secreting Cells V V Roshchina, 2008-01-01 This book summarizes information on autofluorescence of plant secretory cells as a phenomenon and the possibilities of the practical use of light emission by cell biologists biophysists biochemists botanists and ecologists *Current Trends in the Embryology of Angiosperms* Sant Saran Bhojwani, Woong-Young Soh, 2013-04-17 During the last two decades the modern techniques of histochemistry electron microscopy plant physiology biochemistry cell and molecular biology immunology and genetics have been applied to investigate the intricacies of the processes involved in embryo formation and considerable new information has been generated A better understanding of these processes has enhanced our capacity to manipulate fertilization and embryo development This has changed the face of the embryology of angiosperms from a descriptive science to an experimental and applied science The revolutionary progress made in this fascinating field of sexual reproduction was the motivation to prepare this volume It includes 21 chapters written by experts who have made substantial contributions to their respective fields It covers all aspects of the embryology of angiosperms ranging from development isolation and structure of male and female gametes their fusion in vivo and in vitro and structure physiology and genetics of zygotic embryogenesis to endosperm and seed development Advances in somatic embryogenesis synthetic seed technology and regeneration of haploid plants from male and female gametophytes are discussed Other important topics covered in this volume are sexual incompatibility parthenocarp and apomixis The last chapter deals with the embryological perspective of inheritance of extra nuclear genes All the chapters contain up to date information and are profusely illustrated Graduate and postgraduate students teachers and scientists of botany and other areas of plant sciences will find this book extremely useful

Flowering Plant Embryology Nels R. Lersten, 2008-02-28 Drawing from a lifetime of teaching botany Dr Nels Lersten presents the study of the structures and processes involved in the reproduction of plants in his text Flowering Plant

Embryology This richly illustrated reference text with more than 350 figures and illustrations presents general angiosperm embryology as it applies to economically important plants. The unique focus on economically important species increases the relevance of this book to today's students and researchers in the plant sciences. Lersten emphasizes the plant species that affect human livelihood including weeds and other cultivated plants that are used for commercial products. Selected from the thousands of economically important plants, the examples chosen for illustration and discussion are familiar especially to students from North America, Northern Europe, and Japan. Although the emphasis of this book is economically important plants, the information within applies to almost all flowering plants. Extremely readable and well written, this book is neither dense nor academic in tone. Lersten treats topics with a uniformity of style and organization that enhances comprehension. Terms are well defined and the derivation of each is explained to further facilitate student learning. The book presents research results, hypotheses, and speculations about why things are as they are, with supporting facts and specific examples that provide a firm foundation for students' understanding of embryological diversity among economic plants. *Current Topics in Developmental Biology*, 1996-09-18. Volume 34 continues the series' tradition of timely review and incisive analyses of key research in developmental biology. Not only valuable to researchers at the forefront of animal and plant development, this volume is also a friendly introduction to students and professionals who are curious about current topics in cellular and molecular mechanisms in development. **Plant Biotechnology in Ornamental Horticulture** Yi Li, Yan Pei, 2007-02-28. Find out how biotechnology can produce more nutritious fruits and vegetables, more colorful flowers, and grass that needs less water and mowing. *Plant Biotechnology in Ornamental Horticulture* presents an in-depth overview of the key scientific and technical advances, issues, and challenges in one of the fastest growing segments of Plant Lipid Biosynthesis. John L. Harwood, 1998-11-12. A review of the most recent advances in plant lipid biosynthesis, particularly relevant to industry.

Concepts in Photobiology G.S. Singhal, G. Renger, S.K. Sopory, K.D. Irrgang, Govindjee, 2012-12-06. Photobiology is an important area of biological research since a very large number of living processes are either dependent on or governed by light that we receive from the Sun. Among various subjects, photosynthesis is one of the most important and thus a popular topic in both molecular and organismic biology and one which has made a considerable impact throughout the world since almost all life on Earth depends upon it as a source of food, fuel, and oxygen. However, for growth of plants, light is equally essential, and research on photomorphogenesis has revealed exciting new developments with the application of newer molecular biological approaches. The present book brings together and integrates various aspects of photosynthesis, biology of pigments, light regulation of chloroplast development, nuclear and chloroplast gene expression, light signal transduction, other photomorphogenetic processes, and some photoecological aspects under one cover. The chapters cover biochemical and molecular discussions of most of the above topics in a comprehensive manner and include a wide range of hot topics that are currently under investigation in the field of photobiology of cyanobacteria, algae, and plants. The authors of this book are

selected international authorities in their fields from USA Europe Australia and Asia The book is designed primarily to be used as a text book by graduates and post graduates It is however also intended to be a resource book for new researchers in plant photobiology Several introductory chapters are designed as suitable reading for undergraduate courses in integrative and molecular biology biochemistry and biophysics *Current Topics in Developmental Biology* Gerald P.

Schatten,2005-11-09 *Current Topics in Developmental Biology* provides a comprehensive survey of the major topics in the field of developmental biology The volumes are valuable to researchers in animal and plant development as well as to students and professionals who want an introduction to cellular and molecular mechanisms of development The series has recently passed its 30 year mark making it the longest running forum for contemporary issues in developmental biology Includes information on the Zebrafish genetics and formation of embryonic vasculature Offers an analysis of muscle stem cells Provides data on diseases in the Drosophila fly Selection of 9 tables and 10 color figures Plants and UV-B Peter
