Molecular Basis Of Nk Cell Recognition And Function:

Human B Cell Populations Manlio Ferrarini, Federico Caligaris-Cappio, 1997-01-01 B cells used to be considered as a homogeneous population of cells destined to produce antibodies of increasing affinity and to maintain an immunological memory In recent years it has been determined that B cells can be subdivided into different subsets characterized by distinct morphologic phenotypic and functional features Presenting results of research work on the definition of B cell subset populations this book explains the basic mechanisms that control B cell activation stimulation and regulation Articles include studies on both normal and malignant B cells and describe the mechanisms underlying T B cell interactions during the immune response The most important advances in the field of immunodeficiency are also reported This volume will be essential not only for basic and clinical immunologists but also for hematologists pathologists and rheumatologists with a special interest in the pathogenesis of lymphoproliferative or autoimmune disorders Specificity, Function, and

Development of NK Cells Klas Kärre, Marco Colonna, 2012-12-06 Our understanding of the function of natural killer NK cells has dramatically changed in recent years The discovery of NK receptors specific for MHC class I molecules and the study of the role of co stimulatory and adhesion molecules have led to an understanding of how NK cells recognize tumor and virally infected cells that have lost expression of MHC class I molecules or have altered distribution of normal cell surface molecules Such recognition events lead to intracellular signals which can be either stimulatory or inhibitory This book provides an insight into how NK cells develop how they learn to distinguish altered cells from normal cells and into their biological role in controlling infections and tumors **Tumor Immunology** Giorgio Parmiani, Michael T. Lotze, 2002-04-25 Recent advances

in immunology and molecular biology have resulted in new therapeutic approaches being generated and implemented in cancer clinics The discovery of new antigens mechanisms of antigen presentation and interplay of cells involved in anti tumor immunity have made the clinical control of some cancers more plausible than previously tho **Cytotoxic Cells:**

Recognition, Effector Function, Generation, and Methods SITKOVSKY, HENKART, 2012-12-06 Our motivation for putting together this book was the need for a single source reference that could be used as an introduction to cell mediated cytotoxicity for newcomers to this field such as students and fellows beginning work in our laboratories At present no such book is available and we felt that it would be useful as a teaching tool and as a way of conveying our enthusiasm about recent progress in the cytotoxicity field to our colleagues in allied areas It was with some hesitation that we approached our colleagues with the proposal for this book and we were pleased to find them very supportive of the idea and willing to participate We thought it important to broaden the scope of the book to include historical molecular cell biological and clinical aspects of cell mediated cytotoxicity To our knowledge this is the first book on cell mediated cytotoxicity with such a broad scope Historically studies on cellular cytotoxicity were part of cellular immunology from its origin One development of tremendous import was the advent of the ^{51}Cr assay which allowed this arm of the immune response to be measured easily

and quantitatively Thus a readout of this effector pathway is available within a few hours other immune effector functions can take days or even longer to assay and the assays are often less quantitative

Moore,Bernard Roizman,Richard Whitley,Koichi Yamanishi,2007-08-16 This comprehensive account of the human herpesviruses provides an encyclopedic overview of their basic virology and clinical manifestations This group of viruses includes human simplex type 1 and 2 Epstein Barr virus Kaposi s Sarcoma associated herpesvirus cytomegalovirus HHV6A 6B and 7 and varicella zoster virus The viral diseases and cancers they cause are significant and often recurrent Their prevalence in the developed world accounts for a major burden of disease and as a result there is a great deal of research into the pathophysiology of infection and immunobiology Another important area covered within this volume concerns antiviral therapy and the development of vaccines All these aspects are covered in depth both scientifically and in terms of clinical guidelines for patient care The text is illustrated generously throughout and is fully referenced to the latest research and developments [Innate Immune Cell Therapy of Cancer](#) Asha B. Pillai,Rizwan Romee,2023-09-13 Adoptive cellular immunotherapy of cancer particularly chimeric antigen receptor transduced T cell CAR T therapies have enjoyed an explosion of clinical trials and translational and basic research in the past decade The concept and design of the CAR though originally intended to optimize targeting of innate natural killer cells NK cells to tumor specific antigens was laterally applied in the past decade to conventional autologous and later third party allogeneic T cells with first in kind successes in leukemia immunotherapy in both adults and children This approach also spawned the development of an entire industry focused on cancer immunotherapy laying the foundation for

the current paradigm shifts away from toxic chemo radiotherapy to immune targeting. Aside from cytokine release toxicities, specific obstacles plaguing existing CAR T cell therapies include suboptimal killing by fatigued or senescent autologous patient-derived T cells, derived acquisition of tumor resistance to T cell-based immune therapies, and graft-versus-host disease (GVHD) associated with allogeneic conventional T cell therapies.
