Molecular Biology Of Rice:

Molecular Biology of Rice Ko Shimamoto, 1999-02 Recent advances in genome analysis and transformation have made rice a model monocot for molecular biologists This volume covers four areas of rice molecular biology in which exciting progress has been made recently genome analysis and gene isolation development regulation of gene expression and transformation and rice improvement It will be of great interest to researchers who work in traditional agricultural sciences using rice as well as to those who have an interest in using rice as an experimental model for basic research The book gives an overall view on what has already been done as well as what will be possible in rice It presents chapters on development and gene regulation exciting new research area in the future and explores potentials in rice improvement using various molecular biological methods *Molecular Research in Rice* Kiyosumi Hori, Matthew Shenton, 2020-10-06 This volume presents recent research achievements concerning the molecular genetic basis of agronomic traits in rice Rice *Oryza sativa* L is the most important food crop in the world being a staple food for more than half of the world's population Recent improvements in living standards have increased the worldwide demand for high yielding and high quality rice cultivars To achieve improved agricultural performance in rice while overcoming the challenges presented by climate change it is essential to understand the molecular basis of agronomically important traits Recently developed techniques in molecular biology especially in genomics and other related omics fields can reveal the complex molecular mechanisms involved in the control of agronomic traits As rice was the first crop genome to be sequenced in 2004 molecular research tools for rice are well established and further molecular studies will enable the development of novel rice cultivars with superior agronomic performance **2nd International Workshop on Molecular Biology of Rice** International Workshop on Molecular Biology of Rice (2nd : 1990 : Kawasaki Medical School), 1990 **Molecular Biology of Fungal Development** Heinz D. Oryza: From Molecule to Plant Takuji Sasaki, Graham Moore, 1997-08-31 Recent studies have shown that despite gross differences in genome size the gene order in the cereal genomes has remained remarkably similar This observation implies that the small genome of rice will reflect the basic structure of the cereal genomes Rice will therefore become an important tool for all cereal geneticists molecular biologists as information generated by rice breeders geneticists molecular biologists becomes combined in databases with that generated by researchers studying other cereals Rice research will therefore be of interest to all cereal breeders geneticists molecular biologists This Edition reviews the current state of knowledge of its genome genes germplasm collections trait analysis breeding systems mutator systems transformation and diseases Rice Genetics III Gurdev S. The Volume 2 of the treatise on the Developments in Physiology Biochemistry and Molecular Biology of Plants provides additional information in the crucial areas for making precise and applied research in the national context on the one hand and to unravel the science on the other hand In the earlier volume the theme of publishing this needful treatise has been already made obvious However in view of the experiences and enormous advances in plant science research in the last few decades providing enough insight to scan vital research in this century has almost certainly enlightened the path to undertake necessary research projects for the benefit of mankind to which we are indispensably committed We the plant physiologists biochemists molecular biologists and plant nutritionists must be proud of our support to the world's farmers which has helped them make their achievement possible In this century up to 2025 the human population is expected to double and that is in truth a serious issue for us to trace out the limiting factors reducing yield potentiality of crop plants on the one hand and to understand the science of related processes at different levels alternatively This principally necessitates for elucidation of dimensions of environmental stresses in relation to crop plants and their genotypes optimally suitable to prevailing stress conditions Of course in the last few decades more emphasis was laid in this direction and remarkable progress has been made at the global scale to meet the challenges Owing to this distinguished scientists have been consistently reviewing and synchronizing the manifold research and signifying specific research of basic and applied implication in classified segment It is delightful to mention that our attempt to sufficiently provide the essential and comprehensive literature to speed up important research in explicit areas of plant sciences has been once again tremendously satisfactory due to exceptional dedication of illustrious Indian scientists in the preparation of this momentous work This treatise has been ordered with twelve excellent contributions in the form of review articles by thirty well known Indian workers and academicians The reviews are relevant to guide for theme oriented research as well as for scientific future planning of research projects The four applicable sections related to I Sustainable Crop Productivity II Recent Advances in Plant Metabolism III Molecular Physiology of Plants IV Environmental Stresses in Plants consist of over twelve meaningful review articles as substantial chapters Moreover as promised prominence has been given to compile extremely important aspects of Stress Physiology The detailed choice of the contents of the various contributions has been left largely to the individual authors Doubtless this book will be of immense help to scientists teachers and students of almost all disciplines of Agriculture Botany and Biotechnology **Molecular Biology and Biotechnology** John M. This popular textbook has been completely revised and updated to provide a comprehensive overview and to reflect all the latest developments in this rapidly expanding area **Rice Biology in the Genomics Era** Hiro-Yuki Hirano, Atsushi

Hirai, Yoshio Sano, Takuji Sasaki, 2008-01-08 Rice *Oryza sativa* is one of the most important staple food crops in the world. Breeding efforts to improve the agronomical quality of rice have been conducted and studies on rice from the viewpoint of basic biological interest have also been carried out. In 1991 a book entitled *Rice* edited by Dr Bajaj was published as the 14th volume in the series *Biotechnology in Agriculture and Forestry* BAF detailing rice research activities at that time and focusing mainly on cell and tissue culture and genetic variability. Studies on rice have fundamentally advanced since then whose outcomes are mentioned below. This is a good reason to compile a new volume on rice. The situation regarding rice research has markedly changed in the last 16 years. First the genomic sequences of rice were completely determined by the International Rice Genome Sequencing Project in 2004. Since the genome sequence of *Arabidopsis thaliana* had been determined in 2000, rice became the second species in the seed plants to have its genome well understood. Second the technology to transform rice by the *Agrobacterium* mediated method was developed and is now established. In classical phytopathology *Poaceae* including rice has not been considered as a host for *Agrobacterium*. This transformation method is relatively easy and reproducible as compared to conventional transformation methods using protoplasts and is now widely used in rice research.

Progress in Nucleic Acid Research and Molecular Biology, 1993-07-12. *Progress in Nucleic Acid Research and Molecular Biology* *Present Knowledge Of Rice Genetics And Cytogenetics* Te-tzu Chang, 2008-04-03. The Rice Genetics Collection of past symposia and other selected literature contains nearly 4 400 pages of searchable information on rice genetics and cytogenetics published by the IRRI and its partners since 1964. In addition to the five genetics symposia held at 5 year intervals since 1985 the collection contains classic publications that kicked off significant reporting on these subjects in the early 1960s. This collection is a comprehensive and historical documentation on the subject of rice genetics spanning 45 years of research and scholarly work. This technical bulletin on the *Present Knowledge of Rice Genetics and Cytogenetics* written in 1964 by the late Te Tzu Chang, a renowned geneticist, provided the first effort to bring together in one medium the voluminous multilanguage literature on these important subjects. It contains seven chapters on topics dealing with the *Oryza* species and species relationships, the origin and indigenous center of cultivated rices, cytological and cytogenetical studies and their evaluation in relation to rice breeding, geographical groups of cultivated rices and intervarietal hybrid sterility in *Oryza sativa* and areas requiring new or renewed research efforts.

Advances in Molecular Genetics of Plant-Microbe Interactions, Vol. 2 E.W. Nester, Desh Pal S. Verma, 2013-04-17 Research on the interaction between plants and microbes continues to attract increasing attention both within the field as well as in the scientific community at large. Many of the major scientific journals have recently reviewed various aspects of the field. Several papers dealing with plant-microbe interactions have been featured on the covers of scientific publications in the past several months and the lay press have recently presented feature articles of this field. An additional sign of the interest in this field is that the International Society of Molecular Plant-Microbe Interactions has almost 500 members. This book is a collection of the papers that were given at the Sixth International Symposium on the Molecular Genetics of Plant-Microbe Interactions which was held in Seattle, Washington in July 1992. Approximately 650 scientists attended and approximately 50 lectures covering the topics of Agrobacterium-plant interactions, Rhizobium-plant interactions, bacteria-plant interactions, fungal-plant interactions and new aspects of biotechnology were presented. In addition, many sessions were devoted to the plant response to the microbe. Over 400 posters were presented of which the authors of 20 were selected to give an oral presentation. These papers are included in this volume as well. The symposium also included speakers whose research interests are not directly related to plant-microbe interactions but who are at the cutting edge of research areas that impact on the theme of the symposium. These individuals kindly agreed to summarize their talks and their papers are also included.

Plant Nutrition — Molecular Biology and Genetics G. Gissel-Nielsen, A. Jensen, 2013-06-29 The sixth International Symposium on Genetics and Molecular Biology of Plant Nutrition was held in Elsinore, Denmark from August 17-21, 1998 and organised by the RiSO National Laboratory in the year of its 40 anniversary. The 98 participants represented 23 countries and 80 scientific contributions with 43 oral and 37 poster presentations. The symposium addressed the molecular mechanisms, physiology and genetic regulation of plant nutrition. The Symposium brought together scientists from a range of different disciplines to exchange information and ideas on the molecular biology of mineral nutrition of plants. The symposium emphasised Bridging the gap between molecular biology, applied genetics, plant nutrition and plant breeding. The development of methodologies to improve the efficiency and effectiveness of nutrition of plants. Quality of plant products. With sessions on Nitrogen, Phosphorous, Micronutrients, Symbiosis, Membranes, Stress, Heavy Metals and Plant Breeding. In comparison with the previous conferences in this series more emphasis was placed on use of molecular techniques to clarify physiological mechanisms and processes, gene expression and regulation as well as genetic marker assisted analysis. Significant progress of molecular genetic markers and other progress was reported in exploitation of biotechnologies in breeding programmes.

Cellular and Molecular Biology of Plant Seed Development Brian A. Larkins, Indra K. Vasil, 2013-03-09 The beginnings of human civilization can be traced back to the time nearly 12 000 years ago when the early humans gradually changed from a life of hunting and gathering food to producing food. This beginning of primitive agriculture ensured a dependable supply of food and fostered the living together.

of people in groups and the development of society During this time plant seeds were recognized as a valuable source of food and nutrition and began to be used for growing plants for food Ever since plant seeds have played an important role in the development of the human civilization Even today seeds of a few crop species such as the cereals and legumes are the primary source of most human food and the predominant commodity in international agriculture Owing to their great importance as food for humans and in international trade seeds have been a favorite object of study by developmental biologists and physiologists nutritionists and chemists A wealth of useful information is available on the biology of seeds
