Molecular Chaperones In Health And Disease Handbook Of Experimental Pharmacology:

Molecular Chaperones in Health and Disease Matthias Gaestel, 2005-12-29 Molecular chaperones are involved in a wide variety of essential cellular processes in living cells. A subset of molecular chaperones have been initially described as heat shock proteins protecting cells from stress damage by keeping cellular proteins in a folding competent state and preventing them from irreversible aggregation. Later it became obvious that molecular chaperones are also expressed constitutively in the cell and are involved in complex processes such as protein synthesis, intracellular protein transport, post translational modification and secretion of proteins as well as receptor signalling. Hence it is not surprising that molecular chaperones are implicated in the pathogenesis of many relevant diseases and could be regarded as potential pharmacological targets. Starting with the analysis of the mode of action of chaperones at the molecular, cellular and organismic level, this book will then describe specific aspects where modulation of chaperone action could be of pharmacological and therapeutic interest.

Dimethyl Sulfoxide (DMSO) in Trauma and Disease Stanley W. Jacob, Jack C. de la Torre, 2015-04-07 First isolated as a chemical compound by a Russian chemist in 1866, dimethyl sulfoxide (DMSO) proved to be a near perfect solvent for decades before its remarkable biological and medical activities were discovered. DMSO is one of the most prodigious agents ever to come out of the world of drug development. Its wide range of biological actions invol

This volume presents outstanding and original reviews on a variety of topics including NY ESO 1 review of an immunogenic tumor antigen, Order disorder death lessons from a superorganism, Control of differentiation in progression of epithelial tumors, Cancer vaccines, preclinical studies and novel strategies, Clinical results of vaccine therapy for cancer, learning from history for improving the future, Immunodominance and immunodomination, critical factors in developing effective CD8 T cell based cancer vaccines, NK cell receptors as tools in cancer immunotherapy, Innate immune recognition and suppression of tumors, Inhibitors of the HSP90 molecular chaperone.

current status *Heat Shock Proteins in Cancer* Stuart K. Calderwood, Michael Y. Sherman, Daniel R. Ciocca, 2007-09-09 Heat shock proteins are emerging as important molecules in the development of cancer and as key targets in cancer therapy These proteins enhance the growth of cancer cells and protect tumors from treatments such as drugs or surgery However new drugs have recently been developed particularly those targeting heat shock protein 90 As heat shock protein 90 functions to stabilize many of the oncogenes and growth promoting proteins in cancer cells such drugs have broad specificity in many types of cancer cell and offer the possibility of evading the development of resistance through point mutation or use of compensatory pathways Heat shock proteins have a further property that makes them tempting targets in cancer immunotherapy These proteins have the ability to induce an inflammatory response when released in tumors and to carry tumor antigens to antigen presenting cells They have thus become important components of anticancer vaccines Overall heat shock proteins are important new targets in molecular cancer therapy and can be approached in a number of contrasting approaches to therapy **Stress Science** George Fink, 2010-04-06 Stress is a universal phenomenon that impacts adversely on most people This volume provides a readily accessible compendium that explains the phenomenon of stress the neural endocrine and molecular mechanisms involved the clinical effects and the impact on individuals and society Clinical attention focuses on disorders of the stress control system e g Cushing s Syndrome Addison s Disease and the adverse impact of stress on human physical and mental health Detailed reviews address disorders such as PTSD anxiety major depression psychoses and related disorders such as combat fatigue and burnout The work covers interactions between stress and neurodegenerative disorders such as Alzheimer s disease and Parkinson s disease as well as stress immune inflammatory interactions in relation to cancer and autoimmune and viral diseases Emphasis is also placed on the role of stress in obesity hypertension diabetes type II and other features of the metabolic syndrome which has now reached epidemic proportions in the USA and other countries Chapters offer impressive scope with topics addressing animal studies disaster diurnal rhythms drug effects and treatments cognition and emotion physical illness psychopathology immunology and inflammation lab studies and tests and psychological biochemical genetic aspects Richly illustrated with over 200 figures 75 in color Priced affordably this compendium of articles appeals to the end user interested in stress research who would not otherwise purchase the larger Encyclopedia of Stress Articles carefully selected by one of the world s most preeminent stress researchers and contributors represent the most outstanding scholarship in the field with each chapter providing fully vetted and reliable expert knowledge **cis-trans Isomerization in Biochemistry** Christophe Dugave, 2006-10-06 Collating the knowledge from over 20 000 publications in chemistry biology and nanotechnology this handbook is the first to comprehensively present the state of the art in one ready reference A team of international authors connects the various disciplines involved covering cis trans isomerization of double bonds and pseudo double bonds as well as other cis trans isomerizations For biochemists organic chemists physicochemists photochemists polymer and medicinal chemists
