Emphasis is on understanding principles and characteristics and industrial applicability **Additive Manufacturing for Polymers** Jianlei Wang, Jingjun Wu, Jia-Tao Miao, Tuck-Whye Wong, 2023-10-16 3D printing also known as additive manufacturing is a manufacturing process that connects materials layer by layer to produce a solid object based on networked digital model files. Advantages of 3D printing over traditional manufacturing include less material consumption, lower costs, faster production process, customizable degrees of freedom and complexity of geometric shapes. The traditional manufacturing of a functional structural part often requires multiple independent process steps while 3D printing can fabricate the same part in one step, enabling small batch production and customization of personalized products. Due to the diversity of materials available, 3D printing for polymer can be used to create lightweight complex structures in aerospace models of architectural structures, art reproductions and biological tissues and organs *Mechanics of Additive and Advanced Manufacturing, Volume 8* Sharlotte Kramer, Jennifer L.
