Molecular Mechanisms Of Immunological Self Recognition:

Molecular Mechanisms of Immunological Self-Recognition Frederick Alt, Henry J. Vogel, 2014-06-28 Molecular Mechanisms of Immunological Self Recognition covers the understanding of immunological self recognition The introductory chapter of the book summarizes the dawn of the insight into immunological tolerance and provides an overview of research on the underlying mechanisms The book addresses the developments in the molecular mechanisms of B and T cell tolerance and describes the failure of tolerance in autoimmunity The text concludes by furnishing orienting perspectives and highlighting new information presented The novel findings characterized as impressive advances pertain to the areas of B cell development and the generation of molecular diversity V gene usage especially from transgenes in positive and negative thymic selection the handling of positive and negative signals by T and B cells anergy in postthymic T cells the design of peptide based therapy for autoimmune diseases and the design of therapy with the aid of monoclonal antibodies Immunologists will find the text useful **Current Catalog** National Library of Medicine (U.S.), 1993 First multi year cumulation covers six years 1965 70 *National Library of Medicine Current Catalog* National Library of Medicine (U.S.), 1993 Phylogenetic Perspectives on the Vertebrate Immune System Gregory Becker, Manickam Sugumaran, Edwin L. Cooper, 2012-12-06 This book contains the proceedings of the first meeting on invertebrate immunity ever sponsored as a summer research conference by the Federation of American Societies for Experimental Biology FASEB The conference was held in Copper Mountain CO from July 11 16 1999 It was an extension of a New York Academy of Sciences meeting entitled Primordial Immunity Foundations for the Vertebrate Immune System held on May 2 5 1993 at the Marine Biological Laboratories in Woods Hole MA The proceedings of that meeting were published in The Annals of the New York Academy of Sciences volume 712 At that meeting all the attendees agreed that this type of conference a relatively small focused gathering allowed for participation by investigators at all levels of their careers We further agreed that we should search for a forum that would allow this meeting to continue The FASEB Summer Research Conference was an excellent vehicle for this type of meeting Furthermore this year's participants decided to continue this meeting as a regularly scheduled FASEB sponsored event This was a unique conference in the sense that it focused upon mechanisms of development and defense in protostome and deuterostome invertebrates and lower vertebrates There was a strong emphasis on evolutionary cell biology phylogenetic inferences and the evolution of recognition and regulatory systems *Transgenesis and Targeted Mutagenesis in Immunology*, 2014-06-28 Investigations into the field of immunology are rapidly expanding with the use of genetically altered mice at the embryonic stage This breakthrough laboratory guide provides a complete study of transgenesis and targeted mutagenesis in laboratory mice that will be valued by researchers looking for fresh observations and interpretations when designing future experiments Special Features Include Contributions of two Nobel Prize winners Addresses the use of mouse models in studying the immune system Targets gene distribution in embryonic stem cells and their introduction into

blastocyte mice models Analyzes the in vivo functional loss of embryonic cells A practical useful guidebook for individual researchers laboratories and libraries The Immune Synapse as a Novel Target for Therapy Luis Graca, 2007-12-18 This volume gives an overview on the progress in immune synapse research from basic science to clinical trials and the major mechanisms involved It discusses how interfering with T cell activation may lead to immune tolerance immune modulation and the recruitment of regulatory T cells the role of monoclonal antibodies in tolerance induction and mechanisms maintaining dominant tolerance **Intolerant Bodies** Warwick Anderson, Ian R. Mackay, 2014-11-15 A unique collaboration between Ian Mackay one of the prominent founders of clinical immunology and Warwick Anderson a leading historian of twentieth century biomedical science Connection laboratory research clinical medicine social theory and lived experience the authors reveal how doctors and patients have come to terms with this new concept of pathogenesis one that was accepted only in the 1950s **Immunological Tolerance** Gregory R. Invertebrate Historecognition Richard K. Grosberg, Dennis Hedgecock, Keith Nelson, 2012-12-06 Historecognition broadly defined spans the processes responsible for the regulation of the genetic integrity of self in the face of conspecific allogeneic and heterospecific xenogeneic nonself The existence of precise historecognition systems in the invertebrates can be traced

back to Bancroft's discovery in 1903 of strain specific regulation of colony fusion in the compound ascidian *Botryllus schlosseri* and Wilson's report in 1907 of species specific sponge re aggregation. Despite this provocative history invertebrate historecognition remained largely unexplored for over half a century while studies of vertebrate immune systems prospered. Then in the 1970's interest in invertebrate historecognition grew once again this time cast largely in terms of understanding the mechanisms and evolutionary history of vertebrate immunity. From our current understanding of vertebrate immunity and invertebrate historecognition three generalizations about their relationships can be drawn. First despite substantial knowledge about the genetics and molecular biology of cell recognition in the context of vertebrate immunity and to a lesser extent of invertebrate historecognition the evolutionary relationships between invertebrate self/nonself recognition and vertebrate immune systems remain obscure. Second although vertebrate allograft recognition is of dubious functional significance itself because intergenotypic cellular contacts are unusual except during fertilization and pregnancy natural allografts occur frequently as sedentary invertebrates grow and compete for living space. It is now known that the operation of invertebrate historecognition systems can profoundly affect the outcomes of competitive interactions by mediating allogeneic aggressive behavior and somatic fusion.

Jonathan Soboloff, Dietmar J. Kappes, 2017-03-27 T cells play a vital role mediating adaptive immunity a specific acquired resistance to an infectious agent produced by the introduction of an antigen. There are a variety of T cell types with different functions. They are called T cells because they are derived from the thymus gland. This volume discusses how T cells are regulated through the operation of signaling mechanisms. Topics covered include positive and negative selection early events in T cell receptor engagement and various T cell subsets.
