

The Political Ecology of Water: An Introduction*

By Barbara Rose Johnston

1. Introduction

The perception of water scarcity now in play in policy circles and in the media is often manufactured and at times purposefully manipulated to support various agendas (of water companies, corrupt officials and governments, and others). Our ability to develop effective responses to current water crises and avoid the exacerbation and emergence of new crises is complicated by the contradictions between agendas and actions that value water as a public good and human right, and those that value water as an essential and profitable commodity.

✈ The United Nations, the World Commission on Dams, the scientific community and civil society attempt to apply through international law and regulatory policy a rights-based approach that includes decentralization and place-based water resource development, and management reflecting human environmental conditions and needs. At the same time, the political mechanisms of trade agreements and financial institution and government lending policies push through with incredible speed and authority privatization processes and projects. These contradictions suggest a future of messy conflict.
