Radar Systems:

Radar Systems Paul A. Lynn, 2012-12-06 The rapid development of electronics and its engineering applications ensures that new topics are always competing for a place in university and polytechnic courses But it is often difficult for lecturers to find suitable books for recommendation to students particularly when a topic is covered by a short lecture module or as an option Macmillan New Electronics offers introductions to advanced topics The level is generally that of second and subsequent years of undergraduate courses in electronic and electrical engineering computer science and physics Some of the authors will paint with a broad brush others will concentrate on a narrower topic and cover it in greater detail But in all cases the titles in the Series will provide a sound basis for further reading of the specialist literature and an up to date appreciation of practical applications and likely trends The level scope and approach of the Series should also appeal to practising engineers and scientists encountering an area of electronics for the first time or needing a rapid and authoritative update vii Preface The basic principles of radar do not change but the design and technology of practical radar systems have developed rapidly in recent years Advances in digital electronics and computing are having a major impact especially in radar signal processing and display I hope that this book will prove a useful introduction to such developments as well as to the underlying principles of radar detection

Modern Radar Systems Hamish Meikle, 2001 This one of a kind book features 536 illustrations drawn in Maple V that offer a greater understanding of various waveforms and other two and three dimensional functions to help you more accurately analyze radar system performance The effects of pulse shaping on transmitter stability and spectra are discussed a topic which is becoming more and more important in the age of electromagnetic compatibility The book addresses the importance of low attenuation and reflection between the main radio frequency blocks including the use of oversized waveguides for long runs

Modern Radar Systems Hamish Meikle, 2008 This revised and updated edition to the popular Artech House book Modern Radar Systems offers complete and current coverage of the subject including new material on accuracy resolution and convolution and correlation The book features more than 540 illustrations drawn in Maple V that offer a greater understanding of various waveforms and other two and three dimensional functions to help you more accurately analyze radar system performance The effects of pulse shaping on transmitter stability and spectra are discussed a topic which is becoming more and more important in the age of electromagnetic compatibility The book addresses the importance of low attenuation and reflection between the main radio frequency blocks including the use of oversized waveguides for long runs

Fundamentals of Multisite Radar Systems V S Chernyak, 2018-05-02 This is an original and comprehensive monograph on the increasingly important field of Multistatic Radar Systems The material covered includes target detection coordinate and trajectory parameter estimation optimum and suboptimum detectors and external interferences The practical problems faced by those working with radar systems are considered most algorithms are presented in a form allowing direct use in engineering practice and many of the results can

be immediately applied to information systems containing different types of sensors not only radars This book is the revised international edition of Chernyak s renowned Russian textbook *Radar Systems Analysis and Design Using MATLAB* Bassem R. Mahafza,2022-03-28 The first edition of this ground breaking and widely used book introduced a comprehensive textbook on radar systems analysis and design providing hands on experience facilitated by its companion MATLAB software The book very quickly turned into a bestseller Based on feedback provided by several users and drawing from the author s own teaching experience the 4th edition adopts a new approach The presentation in this edition takes the reader on a scientific journey whose major landmarks comprise the different radar sub systems and components Along the way the different relevant radar subsystems are analyzed and discussed in great level of detail Understanding the radar signal types and their associated radar signal processing techniques are key to understating how radar systems function Each chapter provides the necessary mathematical and analytical coverage required for a sound understanding of radar theory Additionally dedicated MATLAB functions programs enhance the understanding of the theory and establish a means to perform radar system analysis and design trades The software provides users with numerous varieties of graphical outputs Additionally a complete set of MATLAB code that generates all plot and graphs found within the pages of this textbook are also available All companion MATLAB code can be downloaded from the book s web page The 4th Edition Takes advantage of the new features offered by MATLAB 2021 release Brings the text to a current state of the art Incorporates much of the feedback received from users using this book as a text and from practicing engineers accordingly several chapters have been rewritten Presents unique topics not found in other books Maintains a comprehensive and exhaustive presentation Restructures the presentation to be more convenient for course use Provides a post course reference for engineering students as they enter the field Offers a companion solutions manual for instructors The 4th edition will serve as a valuable tool to students and radar engineers by helping them better analyze and understand the many topics of radar systems This book is written primarily as a graduate level textbook although parts of it can be used as a senior level course A companion solutions manual has been developed for use by instructors **Air and Spaceborne Radar Systems** Philippe Lacomme,2001 The book focuses on the history main principles functions modes properties and specific nature of modern airborne radar It provides a practical tool that will be of major help to engineers and technicians working in industry and in radar research and development *Radar Systems Analysis and Design Using MATLAB Second Edition* Bassem R. Mahafza,2005-03-09 An introduction to radar systems should ideally be self contained and hands on a combination lacking in most radar texts The first edition of Radar Systems Analysis and Design Using MATLAB provided such an approach and the second edition continues in the same vein This edition has been updated expanded and reorganized to include advances in the field and to be more logical in sequence Ideal for anyone encountering the topic for the first time or for professionals in need of on the job reference this book features an abundance of MATLAB programs and code Radar Systems Analysis and Design Using

MATLAB Second Edition presents the fundamentals and principles of radar along with enough rigorous mathematical derivations to ensure that you gain a deep understanding. The author has extensively revised chapters on radar cross section and polarization matched filter and radar ambiguity function and radar wave propagation. He also added information on topics such as PRN codes multipath and refraction clutter and MTI processing and high range resolution. With all MATLAB functions updated to reflect version 7.0 and an expanded set of self test problems you will find this up to date text to be the most complete treatment of radar available providing the hands on tools that will enrich your learning.

Radar Systems Analysis and Design Using MATLAB Bassem R. Mahafza, 2022-03-29

The first edition of this ground breaking and widely used book introduced a comprehensive textbook on radar systems analysis and design providing hands on experience facilitated by its companion MATLAB software. The book very quickly turned into a bestseller. Based on feedback provided by several users and drawing from the author's own teaching experience the 4th edition adopts a new approach. The presentation in this edition takes the reader on a scientific journey whose major landmarks comprise the different radar sub systems and components. Along the way the different relevant radar subsystems are analyzed and discussed in great level of detail. Understanding the radar signal types and their associated radar signal processing techniques are key to understating how radar systems function. Each chapter provides the necessary mathematical and analytical coverage required for a sound understanding of radar theory. Additionally dedicated MATLAB functions programs enhance the understanding of the theory and establish a means to perform radar system analysis and design trades. The software provides users with numerous varieties of graphical outputs. Additionally a complete set of MATLAB code that generates all plot and graphs found within the pages of this textbook are also available. All companion MATLAB code can be downloaded from the book's web page. The 4th Edition Takes advantage of the new features offered by MATLAB 2021 release. Brings the text to a current state of the art. Incorporates much of the feedback received from users using this book as a text and from practicing engineers accordingly several chapters have been rewritten. Presents unique topics not found in other books. Maintains a comprehensive and exhaustive presentation. Restructures the presentation to be more convenient for course use. Provides a post course reference for engineering students as they enter the field. Offers a companion solutions manual for instructors. The 4th edition will serve as a valuable tool to students and radar engineers by helping them better analyze and understand the many topics of radar systems. This book is written primarily as a graduate level textbook although parts of it can be used as a senior level course. A companion solutions manual has been developed for use by instructors.
