Radiation Protection Jacob Shapiro,1976 *Radiation Safety in Nuclear Medicine* Gopal B. Saha,2023-04-04 This new edition is a fully updated guide to radiation safety practice for nuclear medicine professionals and assists the nuclear medicine technologists in taking their board certifying examination The NRC requires the appointment of a radiation safety officer RSO or an associate radiation safety officer ARSO for different uses of radioactive material Board certified nuclear medicine technologists are eligible to be RSO and ARSO in specific uses of radioactive material after successfully completing a 40 hr or 200 hr course on radiation safety depending on the type of RAM use This book covers all subject materials in these courses on radiation safety This guide provides ready made handy information on radiation safety as required in the practice of nuclear medicine presented in a concise form for easy understanding and quick reference related to a given situation and or incident The major change in the new edition of the book is the addition of questions at the end of each chapter to ensure the comprehension of the material by the examinees taking their certifying board examinations As mentioned in the first edition the NRC 10CFR20 for Standards for Radiation Protection and the NRC 10CFR35 for Medical Uses of Radioactive Materials are the primary sources of practical information on radiation safety in nuclear medicine Much of the information is still valid but many changes and additions have also been made since which are fully updated here This is an ideal reference for nuclear medicine physicians nuclear medicine technologists and researchers using radioactive materials Radiological Protection and Safety Pushparaja,2019-09-06 This book is not a text book but a very useful and unique reference book entitled Radiological Protection and Safety A Practitioner s Guide designed to guide people who are interested in radiological protection Health Physicists HPs Radiological Safety Officers RSOs and Medical Physicists operators regulators or anyone responsible for radiological protection of the workers the patients the public and the environment Radiation protection is a multi disciplinary subject The concepts of radiological protection radiation protection standards regulations types of radiation sources and the applications are continually changing over time There are newer challenges to practitioners and facility management to ensure radiological protection and safety of the personnel and the environment during normal operations and in emergency situations There is a need to update their overall knowledge while developing processes technologies in public domain on peaceful applications in medicine research industry and agriculture Optimization of protection is the key to keep the exposures low Public safety is of prime concern This reference guide is written by a practitioner who has decades of experience in radiological safety and regulation The guide is organized in about 300 pages

and in 18 chapters is intended to serve the purpose of finding all radiological safety related topics in one place including the biological effects of radiation exposure along with the recent references It also covers the updated status on issues and topics of concern in natural radiation sources nuclear fuel cycle operations and in the wide variety of applications of radiation and radioisotopes Nuclear and Radiological emergency is considered important and is separately covered in the chapter on radiological protection in emergency exposure situations Decades of operational radiation protection experience gained is transformed selectively to create knowledge to educate and train all those who are involved in the specialized topic of radiation protection which is not taught in all colleges The gap in the knowledge is expected to be filled to a great extent by this this reference book It is invaluable and for keeps Read this book to learn how the radiation hazards control measures like monitoring of the individuals the workplaces and the environment demonstrate that the occupational exposures are low and the environmental impact is negligible during normal operations I dedicate this book to all the stakeholders in ionizing radiation utilization including the radiation protection community

A Guide to Radiation Protection J. Craig Robertson, 1976 Radiation Protection Thomas Johnson, 2022-10-30 **Radiation Protection In The Health Sciences** Marilyn E Noz, Gerald Q Maguire Jr, 1995-12-31 This book takes a very practical approach to presenting a readable source of radiation protection material for anyone working in the areas of radiological and health sciences It is a suitable text on the subject for students preparing for careers as radiologic and nuclear medicine technologists for residents and for medical health physicists It is an good reference guide for anyone using radiation in the health field including physicians The first seven chapters consist of radiation protection principles which have general application These include a discussion of instruments used in the field of radiation protection both for area and personnel monitoring which is rarely found elsewhere Additionally a description is given of SI units for radioactivity exposure absorbed dose kerma and effective equivalent dose as well as risk assessment and the current recommendations of the International Commission on Radiation Protection ICRP and the United States National Council on Radiation Protection and Measurements NCRP The basic radiation protection principles of time distance and shielding are also discussed here The next three chapters are concerned with the practical implementation in the workplace of the principles discussed earlier including a chapter on specific recommendations for the safe use of common sources of radiation the laws governing the use of these sources and the calculation of shielding required for these various sources of radiation The last two chapters detail the methods of calculating absorbed dose from internally deposited radionuclides including a very lucid discussion of the method proposed by the Medical Internal Radiation Dose MIRD Committee of the Society of Nuclear Medicine and external radiation including a discussion of the Bragg Gray method Each chapter has self assessment review questions and problems as a useful aid to retaining important information The four appendices discuss the current status of the units and their current and former usage as well as the concepts of logarithms A complete glossary and set of references are also included Answers to the problems are provided at the end of the book
