Radioactive Waste Disposal Low High Level:

Improving the Regulation and Management of Low-Activity Radioactive Wastes National Research Council, Division on Earth and Life Studies, Board on Radioactive Waste Management, Committee on Improving Practices for Regulating and Managing Low-Activity Radioactive Wastes, 2003-10-14 Low activity radioactive wastes include a broad spectrum of materials for which a regulatory patchwork has evolved over almost 60 years. These wastes present less of a radiation hazard than either spent nuclear fuel or high level radioactive waste. Low activity wastes however may produce potential radiation exposure at well above background levels and if not properly controlled may represent a significant chronic and in some cases an acute hazard. For some low activity wastes the present system of controls may be overly restrictive but it may result in the neglect of others that pose an equal or higher risk. The purpose of this interim report is to provide an overview of current low activity waste regulations and management practices. *Improving the Regulation and Management of Low Activity Radioactive Wastes Interim Report on Current Regulations Inventories and Practices* identifies gaps and inconsistencies that suggest areas for improvements. The final report will assess options for improving the current practices and provide recommendations. **Radioactive Waste Processing and Disposal** U.S. Nuclear Regulatory Commission, 1980

Nuclear Waste Disposal Warren S. Melfort, 2003 The disposal of nuclear waste is becoming a major concern. Many nuclear power plants around the world are nearing the end of their operating lives. This is particularly true in the United States where most nuclear power plants are approaching the end of the operational time period allowed in their licenses. The disposal of radioactive waste from nuclear power plants and nuclear missiles is as politically intense an issue as the plants and missiles themselves. Yet the three issues have remained curiously separate in spite of their close physical ties. Few debates on nuclear power or nuclear weapons discuss the problems of waste disposal should the power plant or missile be decommissioned. Few debates on nuclear waste disposal discuss the opportunities to close nuclear power plants or get rid of nuclear weapons. A disposal site would afford nuclear waste can be generally classified as either low level radioactive waste or high level radioactive waste. Low level nuclear waste usually includes material used to handle the highly radioactive parts of nuclear reactors i.e. cooling water pipes and radiation suits and waste from medical procedures involving radioactive treatments or x rays. Low level waste is comparatively easy to dispose of. The level of radioactivity and the half life of the radioactive isotopes in low level waste is relatively small. Storing the waste for a period of 10 to 50 years will allow most of the radioactive isotopes in low level waste to decay at which point the waste can be disposed of as normal refuse. High level radioactive waste is generally material from the core of the nuclear reactor or nuclear weapon. This waste includes uranium, plutonium and other highly radioactive elements made during fission. Most of the radioactive isotopes in high level waste emit

large amounts of radiation and have extremely long half lives some longer than 100 000 years creating long time periods before the waste will settle to safe levels of radioactivity This new book explores the issues pertaining either directly or indirectly to nuclear waste disposal **A Guide to the U.S. Department of Energy's Low-level Radioactive Waste** ,2002 Understanding Radioactive Waste Raymond L. Murray,1994 This objective report originally prepared for the U S Department of Energy tells the glowing happy story of nuclear waste disposal in America The fourth edition has been updated to include the latest legislative and technical changes It begins by explaining what radioactivity is and goes on to explore the merits of various methods of disposal and the use of licensing and regulation as forms of protection Filled with graphs tables diagrams and black and white photos Annotation copyright by Book News Inc Portland OR *Radioactive Waste Management* ,1981 *Energy Research Abstracts* ,1978 **Monthly Catalogue, United States Public Documents** ,1986 **Monthly Catalog of United States Government Publications** ,1993 *Inventory of Federal Energy-related Environment and Safety Research for FY 1978* ,1979 **Inventory of Federal Energy-related Environment and Safety Research for FY 1978: Project listings and indexes** ,1979 *Energy Abstracts for Policy Analysis* ,1986 *Nuclear Science Abstracts* ,1971 NSA is a comprehensive collection of international nuclear science and technology literature for the period 1948 through 1976 pre dating the prestigious INIS database which began in 1970 NSA existed as a printed product Volumes 1 33 initially created by DOE s predecessor the U S Atomic Energy Commission AEC NSA includes citations to scientific and technical reports from the AEC the U S Energy Research and Development Administration and its contractors plus other agencies and international organizations universities and industrial and research organizations References to books conference proceedings papers patents dissertations engineering drawings and journal articles from worldwide sources are also included Abstracts and full text are provided if available *Civilian Nuclear Waste Disposal* Mark Holt,2012-10-07 **Nuclear Waste Disposal and Utilization ; Hearing Before the Subcommittee on Science, Technology, and Space of the Committee on Commerce, Science, and Transportation, United States Senate, Ninety-fifth Congress, Second Session ...
