

# Radiometric Dating

Radiocarbon decays at a known rate. Paleontologists are able to determine the age of a fossil by measuring the amount of C-14 it contains.

A small piece of the fossil is burned and converted to carbon dioxide gas

Stable C-12

Unstable C-14

C-14 decays into N-14, emitting an electron

Nitrogen

Electron

Living organisms absorb C-14 (radiocarbon) during their lifetimes

A radiation counter records the number of electrons emitted

in the Solar System has been unraveled using natural radioactivity. The sources of this radioactivity are the original creation of the elements and the subsequent bombardment of objects including Earth in the Solar System by cosmic rays. Both radioactive and radiogenic nuclides are harnessed to arrive at ages of various events and processes on Earth. This collection of chapters from the Treatise on Geochemistry displays the range of radioactive geochronometric studies that have been addressed by researchers in various fields of Earth science. These range from the age of Earth and the Solar System to the dating of the history of Earth that assists us in defining the major events in Earth history. In addition, the use of radioactive geochronometry in describing rates of Earth surface processes including the climate history recorded in ocean sediments and the patterns of circulation of the fluid Earth has extended the range of utility of radioactive isotopes as chronometric and tracer tools. Comprehensive interdisciplinary and authoritative content selected by leading subject experts. Robust illustrations, figures, and tables. Affordably priced sampling of content from the full Treatise on Geochemistry.

**Radiometric Dating Results** Thomas Lundqvist, **Absolute Age Determination** Mebus A. Geyh, Helmut Schleicher, 2012-12-06. With the growing recognition during the last two centuries that the Earth has an immense age and processes over long periods of time have changed the morphology and composition of the Earth's crust, geologists have become increasingly interested in determination of absolute ages. A relative geochronology was established on the basis of the lithostratigraphic and biostratigraphic principles developed during the last century. With the discovery of radioactivity, the basis for a new geoscientific discipline, geochronology, was established. Rutherford, 1906. It is the study of geological time based mainly on the time signatures provided by the isotopic composition in geologic materials. The isotopic signature in a rock yields more information than that provided by the geochemical signature alone because it reflects the origin and history of the element in the rock. The aim of geochronology is to calibrate and standardize chronostratigraphic scales to develop geological time scales that have a sensitive or at least useful resolution in order to place the geological events in the correct chronological order and to assign their proper time spans. In practice, the application of geochronology is much wider because the data in the natural archives often provide information on the origin, genesis, and history of the materials. This, of course, requires an understanding of the geochemical behavior of the substances involved.

**Radiometric Dating Results** Thomas Lundqvist, 1993. **Radiometric Dating** Danuta Michalska Nawrocka, 2012. This book explores a diversity of topics related to radiometric dating with particular emphasis on the method of radiocarbon dating and a cross check of its results with luminescence measurements. Starting from the chapter on Methodology, the book includes among other topics the description of the problem of preparation of samples for  $^{14}\text{C}$  measurement, a wide application of the radiocarbon method, and a comparison of results obtained by various methods including the radiocarbon method, the method of OSL, TL, and palynology. The issue of radiocarbon dating of mortars and plasters is thoroughly discussed in the book. Chapter Two: Applications and Three: Luminescence and Radiocarbon Measurements provide examples of the application of the radiocarbon method in the

study of archaeological geological sites from the analysis of soils loesses to the study of organic deposits filling the depressions in the Morasko Meteorite Nature Reserve A wide range of studies reveals the great potential of the radiocarbon method and the presented papers reflect interdisciplinary research
