

Radionuclide Studies of the Upper Gastrointestinal Tract in Children with Feeding Disorders

Sydney Heyman, Peggy S. Eicher and Abass Alavi

From the case records of Children's Hospital of Philadelphia and Children's Seashore House, Philadelphia, Pennsylvania

The case of a female infant with a feeding disorder and with inadequate growth is described. In her workup, there was no evidence of an organic disorder. Barium studies of the upper GI tract showed normal anatomy and function. A radionuclide milk scan was helpful in demonstrating mild reflux and significantly delayed gastric emptying. There was a good response to therapy.

Key Words: feeding disorder; reflux; gastric emptying; scintigraphy

CASE PRESENTATION

Our patient is a 30-mo-old female referred for the evaluation of food refusal and inadequate growth. She was delivered 20 wk prematurely because of placenta previa. Ventilatory support was required for the first 4 wk of life. The neonatal period was further complicated by an intraventricular hemorrhage and retinopathy related to premature delivery. These both resolved and she was discharged at 2.5 mo of age on bottle feedings.

At 10 mo of age, she presented with a urinary tract infection at another institution. A voiding cystourethrogram and a sonogram were normal. Inadequate growth was noted and screening tests to exclude organic disease were obtained. These included electrolytes, complete blood count, thyroid function tests, liver function tests, serum amino acids and urinary organic acids. All were within normal limits and no recommendations were made.

At 16 mo, she was re-evaluated because of developmental delay, with growth parameters at 50th percentile for a 3-5-mo-old. She was receiving formula by bottle with small amounts of rice, beans or mashed potatoes two to three times a day. The child's mother was instructed to introduce a high caloric formula and nutritionally balanced spoon feedings.

She did not return for further assessment until the age of 29 mo. She had been switched to whole-milk and starchy table foods, but her growth parameters had remained at the 50th percentile for a 10-16-mo-old. She was admitted for re-evaluation of her inadequate growth. The child underwent testing for organic disorders

not excluded by medical history or physical examination. These included chest x-ray, urinalysis, electrolytes, complete blood count, thyroid function tests, liver function tests, serum amino acids and urinary organic acids. All results were within the normal range. Bone age assessment by x-ray was consistent with her chronological age. HIV testing was negative. During observation of several meals, our patient demonstrated normal oral motor skills but early satiety. At each meal she was initially interested and fed herself several bites, but she then stopped abruptly and could not be urged to take even her favorite foods. Because this pattern of food refusal had been seen in other children who also had gastroesophageal reflux, an evaluation for gastroesophageal reflux was recommended. Barium studies of the upper gastrointestinal tract showed normal anatomy and function. A milk scan was performed by the oral administration of 120 ml of milk containing 37 MBq (1 mCi) of ^{99m}Tc sulfur colloid.

The initial phase of the study with swallowed boluses, while the patient was in a semi-recumbent position, showed normal esophageal transit (Fig. 1). Sequential 30-sec images over the next 60 min, with the patient supine, revealed two significant episodes of reflux (Fig. 2). Simultaneous computer images were obtained at 5-sec intervals. Time-activity curves from regions of interest (ROIs) placed over the entire esophagus and over the upper half of the esophagus only, confirmed the reflux which reached to the upper esophagus (Fig. 3). Gastric emptying was delayed with 85% of the initial activity retained in the stomach at 60 min, and 61% at 120 min (Fig. 4A). These values are shown plotted on a semilogarithmic coordinates curve with the normal range also displayed (Fig. 4B). There was no evidence of pulmonary aspiration in images obtained over the lung fields, in both anterior and posterior projections, at the end of 1 and 2 hr following the initiation of the study.

Based on findings on the milk scan of mild, though significant, gastroesophageal reflux, and delayed gastric emptying, she was started on an antacid and a prokinetic agent. Without other therapy, her desire to select only certain edibles decreased and her intake of food increased. Subsequently, she was noted to have an optimal rate of weight gain.

DISCUSSION

Patient Selection

Certain clinical findings are frequently observed in patients with inadequate growth which may lead the pediatrician to initiate an evaluation for gastro-esophageal reflux and/or delayed gastric emptying. Patients with reflux tend

This book delves into Radionuclide Studies Of The Gastrointestinal System. Radionuclide Studies Of The Gastrointestinal System is a crucial topic that must be grasped by everyone, ranging from students and scholars to the general public. This book will furnish comprehensive and in-depth insights into Radionuclide Studies Of The Gastrointestinal System, encompassing both the fundamentals and more intricate discussions.

1. This book is structured into several chapters, namely:
 - Chapter 1: Introduction to Radionuclide Studies Of The Gastrointestinal System
 - Chapter 2: Essential Elements of Radionuclide Studies Of The Gastrointestinal System
 - Chapter 3: Radionuclide Studies Of The Gastrointestinal System in Everyday Life
 - Chapter 4: Radionuclide Studies Of The Gastrointestinal System in Specific Contexts
 - Chapter 5: Conclusion
 2. In chapter 1, this book will provide an overview of Radionuclide Studies Of The Gastrointestinal System. This chapter will explore what Radionuclide Studies Of The Gastrointestinal System is, why Radionuclide Studies Of The Gastrointestinal System is vital, and how to effectively learn about Radionuclide Studies Of The Gastrointestinal System.
 3. In chapter 2, the author will delve into the foundational concepts of Radionuclide Studies Of The Gastrointestinal System. The second chapter will elucidate the essential principles that must be understood to grasp Radionuclide Studies Of The Gastrointestinal System in its entirety.
 4. In chapter 3, this book will examine the practical applications of Radionuclide Studies Of The Gastrointestinal System in daily life. The third chapter will showcase real-world examples of how Radionuclide Studies Of The Gastrointestinal System can be effectively utilized in everyday scenarios.
 5. In chapter 4, this book will scrutinize the relevance of Radionuclide Studies Of The Gastrointestinal System in specific contexts. This chapter will explore how Radionuclide Studies Of The Gastrointestinal System is applied in specialized fields, such as education, business, and technology.
 6. In chapter 5, this book will draw a conclusion about Radionuclide Studies Of The Gastrointestinal System. The final chapter will summarize the key points that have been discussed throughout the book.
- This book is crafted in an easy-to-understand language and is complemented by engaging illustrations. It is highly recommended for anyone seeking to gain a comprehensive understanding of Radionuclide Studies Of The Gastrointestinal System.
