Respiratory Burst And Its Physiological Significance:

The Respiratory Burst and Its Physiological Significance A.J. Sbarra,R.R. Strauss,2012-12-06 When phagocytes are exposed to a number of different stimuli they undergo dramatic changes in the way they process oxygen Oxygen uptake increases markedly frequently more than 50 fold the phagocytes begin to produce large quantities of superoxide and hydrogen peroxide and they immediately begin to metabolize large amounts of glucose by way of the hexose monophosphate shunt This series of changes has become known as the respiratory burst It was first believed that the major function of this respiratory burst was to generate powerful antibacterial agents by the partial reduction of oxygen It is becoming apparent that the respiratory burst has much wider application and its physiological function in many different biological areas is clear In this volume we have attempted to bring together the work of experts who have published extensively on the involvement of the respiratory burst in different physiological functions In the first three chapters Dr Borregaard and Dr Berton and co workers and Dr Roos and co workers bring together what is known about the respiratory burst They present up to date versions of the biochemical and metabolic activities associated with the burst In Chapter 4 Dr Styrt and Dr Klempner discuss the respiratory burst as it affects cellular ion homeostasis Dr Cohen and Dr Britigan Chapter 5 present some interesting data on the competition between the respiratory burst and bacteria for oxygen Dr Dobrina and Dr

discovery of the Nox family The central section of the book consists of chapters devoted specifically to an in depth description of the individual members of the Nox family and is followed by chapters focused on the modulators of their function A subsequent section comprises chapters dealing with methodologies of Nox research interaction with other proteins and Nox inhibitors A distinct section of the book deals with non mammalian Noxs from amoeba to zebrafish Subsequent chapters focus on Nox structure a field in which extraordinary progress was made in recent years The volume ends with chapters on Chronic Granulomatous Disease the consequence of Nox loss of function and its treatment by gene therapy The coda is a crystal ball perspective of the hopes for the clinical translation of basic Nox research Written for biochemists cell biologists molecular biologists and clinicians this book is aimed at both senior scientists and young investigators in the field

Biological Reactive Intermediates IV Charlotte M. Witmer, Robert R. Snyder, David J. Jollow, George F. Kalf, James J. Kocsis, 2013-03-09 The finding that chemicals can be metabolically activated to yield reactive chemical species capable of covalently binding to cellular macromolecules and the concept that these reactions could initiate toxicological and carcinogenic events stimulated a meeting by a small group of toxicologists at the University of Turku in Finland in 1975 Jollow et al 1977 The growing interest in this field of research led to subsequent symposia at the University of Surrey in England in 1980 Snyder et al 1982 and the University of Maryland in the U S A in 1985 Kocsis et al 1986 The Fourth International Symposium on Biological Reactive Intermediates was hosted by the Center for Toxicology at the University of Arizona and convened in Tucson Arizona January 14 17 1990 Over 300 people attended There were 60 platform presentations by invited speakers and 96 volunteer communications in the form of posters were offered These meetings have grown from a small group of scientists working in closely related areas to a major international series of symposia which convene every five years to review and place in context the latest advances in our understanding of the formation fate and consequences of biological reactive intermediates The Organizing Committee Allan H Conney Robert Snyder Co chairman and Charlotte M Witmer Rutgers University Piscataway NJ David J Jollow Co chairman Medical University South Carolina Charleston SC 1 Glenn Sipes Co chairman University of Arizona Tucson AZ James J Kocsis and George F

Free Radical Mechanisms of Tissue Injury Mary Treinen Moslen, Charles V. Smith, 1992-02-21 This timely volume describes the contributions of free radicals and reactive oxygen species to disease processes in a variety of tissues Topics include the roles of lipid peroxide modified lipoproteins in atherosclerosis peroxidation products in retinopathy reactive oxygen species and neutrophils in myocardial ischemia reflow injury iron and reactive oxygen species in hemoglobin mediated CNS damage and in asbestos mediated lung injury Critical reviews examine the evidence for radical species in ethanol induced liver injury and in muscular dystrophy The wealth of new information presented makes this book valuable for teaching and an important reference volume for researchers exploring problems in human disease

NETosis 2: The Excitement Continues Mariana J. Kaplan, Marko Radic, Martin Herrmann, 2017-12-28 NETosis a form of cell death that manifests by the release of decondensed chromatin to the extracellular space provides valuable insights into mechanisms and consequences of cellular demise Because extracellular chromatin can immobilize microbes the extended nucleohistone network was called a neutrophil extracellular trap NET and the process of chromatin release was proposed to serve an innate immune defense function Extracellular chromatin NETs were initially observed in studies of neutrophils and are most prominent in these types of granulocytes Subsequent studies showed that other granulocytes and in a limited way other cells of the innate immune response may also release nuclear chromatin following certain kinds of stimulation Variations of NETosis were noted with cells that remain temporarily motile after the release of chromatin Numerous stimuli for NETosis were discovered including bacterial breakdown products inflammatory stimuli particulate matter certain crystals immune complexes and activated thrombocytes Fundamental explorations into the mechanisms of NETosis observed that neutrophil enzyme activity PAD4 neutrophil elastase proteinase 3 and myeloperoxidase and signal transduction pathways contribute to the regulation of NETosis Histones in NET chromatin become modified by peptidylarginine deiminase 4 PAD4 and cleaved at specific sites by proteases leading to extensive chromatin externalization In addition NETs serve for attachment of bactericidal enzymes including myeloperoxidase leukocyte proteases and the cathelicidin LL 37 NETs are decorated with proteases and may thus contribute to tissue destruction However the attachment of these enzymes to NET associated supramolecular structures restricts systemic spread of the proteolytic activity While the benefit of NETs in an infection appears obvious NETs also participate as key protagonists in various pathologic states Therefore it is essential for NETs to be efficiently cleared otherwise digestive enzymes may gain access to tissues where inflammation takes place Persistent NET exposure at sites of inflammation may lead to a further complication NET antigens may provoke acquired immune responses and over time could initiate autoimmune reactions serve as antigen for nuclear autoantibodies and foster DNA immune complex related inflammation Neutrophil products and deiminated proteins comprise an important group of autoantigens in musculoskeletal disorders Aberrant NET synthesis and or clearance are often associated with inflammatory and autoimmune conditions Recent evidence also implicates aberrant NET formation in the development of endothelial damage atherosclerosis and

thrombosis Intravital microscopy provides evidence for conditions that induce NETosis in vivo Furthermore NETs can easily be detected in synovial fluid and tissue sections of patients with arthritis and gout NETosis is thus of interest to researchers who investigate innate immune responses host pathogen interactions chronic inflammatory disorders cell and vascular biology biochemistry and autoimmunity As we enter the second decade of research on NETosis it is useful and timely to review the mechanisms and pathways of NET formation their role in bacterial and fungal defense and their importance as inducers of autoimmune responses **The Neutrophil: Cellular Biochemistry and Physiology** Maurice B.

Hallett,2018-01-18 A synthesis and collation of the recent material regarding the role of the neutrophil in basic pathological processes is presented in this volume The mechanisms of chemotaxis secretion phagocytosis intracellular killing oxygen radical production and arachidonate production are comprehensively reviewed Stimulus response coupling in the neutrophil with chapters on intracellular Ca²⁺ C Kinase phospholipid metabolism microfilaments and membrane electrophysiology are extensively discussed Each chapter provides a critical review by experts with over 1 000 cited references Invaluable to graduate students and medical and scientific researchers this book provides a unique up to date account of cellular biochemistry and physiology of the neutrophil **Fetal and Neonatal Physiology E-Book** Richard Polin,Steven H.
