Globalization and the South Caroline Thomas, Peter Wilkin, 2016-07-27 This volume brings together a group of authors who share a common concern with the effects of globalization on the South Included among these effects is the accelerating erosion of the social economic and political significance of the territorial distinction on which the terms South and North are founded The authors aim is explicit to offer a unique perspective on globalization which places the transformation of the South and the renewed global organization of inequality at the heart of our understanding of the global order

Sustainability and Policy Michael S. Common, 1995-07-28 Two of the greatest problems facing the human race today are poverty and the threat to the natural environment Economic growth is routinely advocated as the solution to poverty but the natural environment is already threatened by current levels of economic activity This compelling book examines both economic and ecological approaches to this dilemma and considers policy issues for industrial economies It also includes a useful review of recent literature in the area Michael Common argues that economists rarely address threats to sustainability He suggests that while economics cannot offer a blueprint for a sustainable society the use of economic or price incentives can help achieve social goals and address threats to sustainability This book is a balanced constructive and original contribution in the rapidly emerging fields of environmental economics and policy

Justice, Posterity, and the Environment Wilfred Beckerman, Joanna Pasek, 2001-05-03 In rich countries environmental problems are seen as problems of prosperity In poor countries they are seen as problems of poverty This is because the environmental problems in poor countries such as lack of clean drinking water are problems that affect them here and now whereas in rich countries the environmental problems that people worry about most are those that largely as a result of current prosperity and economic growth seem likely to harm mainly future generations But what exactly are our obligations to future generations Are these determined by their rights or intergenerational justice or equity or sustainable development The first part of the book argues that none of these concepts provides any guidance but that we still have a moral obligation to take account of the interests that future generations will have And an appraisal of probable developments suggests that while environmental problems have to be taken seriously our main obligation to future generations is to bequeath to them a society in which there is greater respect for basic human rights than is the case today Furthermore generations are not homogeneous entities Resources devoted to environmental protection cannot be used for say health care or education or housing not to mention the urgent

claims in poor countries for better food sanitation drinking water shelter and basic infrastructures to prevent or cure widespread disease It cannot serve the interests of justice if the burden of protecting the environment for the benefit of posterity is born mainly by poorer people today *International Bibliography of Economics 1994* British Library of Political and Economic Science at the London School of Economics,1995 The IBSS is the essential tool for librarians university departments research institutions and any public or private institutions whose work requires access to up to date and comprehensive knowledge of the social sciences **Environmental Health Perspectives** ,1993 **Gender, Development, and Climate Change** Rachel Masika,2002 This book considers the gendered dimensions of climate change It shows how gender analysis has been widely overlooked in debates about climate change and its interactions with poverty and demonstrates its importance for those seeking to understand the impacts of global environmental change on human communities *Forests for the Future* Paul Wolvekamp,1999 Aimed at policy makers and practitioners this work looks at how local and indigenous communities can maintain the balance between their societies and their forest environments when faced with increasing external pressures rising populations and growing demands for basic needs and cash While efforts by governments or coporations to restore and manage forest environments are often non existent or ineffective there frequently exists within communities who depend on forests a wealth of knowledge about rational land use and environmental protection Environmental Regulation Through Financial Organisations:Comparative Perspectives on the Industrialised Nations Benjamin Richardson,2002-02-13 This book takes a comparative perspective of practice in the European Union North America Japan and Australasia arguing that existing legal reforms to promote sustainable development are unlikely to be successful unless environmental policy can be diffused and embedded in the financial services sector This sector plays a crucial role in creating the financial conditions that allow much economic development to proceed Financial markets are already highly regulated in pursuance of various public policy objectives and there is scope to adapt existing regulation to incorporate environmental aspects into the financial services sector In terms of specific reforms the book focuses on the role of corporate environmental reporting economic instruments and liability rules to provide a proper context for engaging financial organisations with the environment as well as reforms to the system of prudential regulation that currently governs this sector Beyond the focus on the financial services sector the book raises complex questions regarding the relationship between the state and market institutions in environmental policy and will appeal to scholars from a wide range of disciplines interested in problems of environmental governance *Sourcebook on Environmental Law* Maurice Sunkin,2001-11-30 Chapter 1 SOURCES AND PRINCIPLES OF ENVIRONMENTAL LAW chapter THE SOURCES OF ENVIRONMENTAL LAW Environmental law the international perspective chapter The sources of international environmental law chapter Customary international law General principles of international law chapter Judicial decisions and the writings of eminent publicists United Nations General Assembly Resolutions chapter Environmental law European Community perspective chapter The

Brief History of Social Problems Frank J.
