**Legal Issues in Mental Health Care** B.A. Weiner,R. Wettstein,2013-06-29 I OVERVIEW Legal Issues in Mental Health Care is aimed at the mental health clinician who provides services on either an inpatient or an outpatient basis It is written for psychiatrists psychologists social workers nurses and other therapists to help them understand and manage legal issues in their daily practice The issues covered apply to therapists who work for an agency or hospital as well as those who work independently The book is meant to serve as a handbook but it also provides a quick resource as legal questions arise which are related to the obligations of the therapist It addresses the legal issues that confront the clinician It is not aimed at the clinician who specializes in forensic mental health issues because the information provided does not reach that level of detail or sophistication Nor is it aimed at the scholar because our goal is to provide practical information in a clear and concise format We have not addressed the wide array of laws protecting the mentally disabled from discrimination most notably the Americans with Disabilities Act 1990 and the Fair Housing Act Most states also have laws that prohibit discrimination in employment services and housing These issues are beyond the scope of this book because we are addressing the legal issues that arise in providing care rather than the rights of mentally disabled persons 11 ORGANIZATION OF THE BOOK The book consists of eleven chapters and a Glossary of Legal Terms

Medicinal Product Liability and Regulation Richard Goldberg, 2014-07-18 The piecemeal developments in product liability reform in Europe have their origins in the tragic association of phocomelia in children with thalidomide in 1962 In many ways these events have continued to generate pressure for reform of product liability especially for the victims of drug induced injury This monograph attempts to address the major problems that typify claims for drug induced injury as well as highlighting the complex interrelationship between liability exposure and drug regulation While medicinal products are subject to strict liability under the product liability directive the claimant may have considerable difficulty in establishing that the relevant product is defective and that it caused the damage It may also be necessary to overcome the development risk defence where this is pleaded The monograph addresses these problems on a comparative jurisprudential basis and seeks to determine whether medicinal products should be treated as a special case in the field of product liability It examines the role of epidemiological evidence in assessing causation in product liability cases concerning medicinal products in the light of recent developments in the UK Supreme Court the United States Canada and France In particular it addresses the difficulties in reconciling the standards of proof in law and science including the theory that causation can be proved on the balance of probabilities by reference to the doubling of risk of injury An important case study compares and contrasts the approaches of the UK and the US to the measles mumps rubella Litigation The book also examines the question as to whether compliance with regulatory standards should protect pharmaceutical manufacturers from product liability suits It seeks to support a via media whereby the victims of drug induced injury can receive justice while at the same time encouraging drug safety and innovation in drug development
