Restoration Of Endangered Species Conceptual Issues Planning And Implementation:

Restoration of Endangered Species Marlin L. Bowles, Christopher J. Whelan, 1994-10-27 As the human impact on the earth leads to ever increasing environmental degradation the restoration of dwindling populations of numerous plant and animal species has become urgent In this volume contributors examine the conceptual planning and applied aspects of recovery of rare or endangered species It is unique in its treatment of both plants and animals and in its presentation of scientific approaches to implemented restorations Experts report on the restoration efforts and plans for the restoration of a wide variety of species including the dune thistle lakeside daisy woodland caribou kit fox and black footed ferret and end with a broad overview suggesting future opportunities and problems

Wildlife Restoration Michael L. Morrison, 2013-03-19

Wildlife Restoration links restoration ecology and wildlife management in an accessible and comprehensive guide to restoring wildlife and the habitats upon which they depend It offers readers a thorough overview of the types of information needed in planning a wildlife habitat restoration project and provides the basic tools necessary for developing and implementing a rigorous monitoring program The book explains the concepts of habitat and niche their historic development components spatial temporal relationships and role in land management reviews how wildlife populations are identified and counted considers captive breeding reintroduction and translocation of animals discusses how wildlife and their habitat needs can be incorporated into restoration planning develops a solid justification for monitoring and good sampling design in restoration projects discusses and critiques case histories of wildlife analysis in restoration projects The author does not offer a cookbook approach but rather provides basic tools for understanding ecological concepts that can be used to design restoration projects with specific goals for wildlife He focuses on developing an integrated approach to large scale landscape restoration In addition he provides guidance on where more advanced and detailed literature can be found *Wildlife Restoration* sets forth a clear explanation of key principles of wildlife biology for the restorationist and will allow wildlife biologists to bring the insights of their field to restoration projects It is an essential source of information for everyone involved with studying implementing or managing wildlife restoration projects including students ecologists administrators government agency staff and volunteer practitioners

Restoring Diversity , In April 1993 a conference of academic biologists agency staff members activists and other experts critically explored the value of ecological restoration as a conservation strategy *Restoring Diversity* examines and expands on the issues set forth at that gathering including strategy case studies the biology of restoration and the use of mitigation in rare plant conservation

Conservation Biology Peggy L. Fiedler, Peter M. Kareiva, 2013-06-29 Reflecting a new generation of conservation biologists upper division and graduate level conservation biology courses as well as for individual reference this book incorporates a number of new authors and additional chapters covering all aspects of one of the most dynamic areas in the life sciences Containing ten additional chapters it includes such timely topics as ecosystem management and the economics of conservation

Introduction to

Conservation Genetics Richard Frankham, Jonathan D. Ballou, David A. Briscoe, 2010-01-28 This impressive author team brings the wealth of advances in conservation genetics into the new edition of this introductory text including new chapters on population genomics and genetic issues in introduced and invasive species They continue the strong learning features for students main points in the margin chapter summaries vital support with the mathematics and further reading and now guide the reader to software and databases Many new references reflect the expansion of this field With examples from mammals birds reptiles fish amphibians plants and invertebrates this is an ideal introduction to conservation genetics for a broad audience The text tackles the quantitative aspects of conservation genetics and has a host of pedagogy to support students learning the numerical side of the subject Combined with being up to date its user friendly writing style and first class illustration programme forms a robust teaching package

Wildlife Review, 1995

Waiting for Wolves in Japan John Knight, 2003 A Japanese conservationist group has launched a campaign for the reintroduction of the wolf in Japan arguing that the wolf would be the savior of upland areas of Japan which are suffering from wildlife pestilence This book examines the reintroduction proposal by drawing on ethnographic fieldwork in one of the candidate areas and shows that conflicts with wildlife are inextricably bound up with social conflict among people and that wildlife pestilence must therefore be understood in terms of its symbolic as well as material dimensions

Ecology of Fragmented Landscapes Sharon K. Collinge, 2009-06 Ask airline passengers what they see as they gaze out the window and they will describe a fragmented landscape a patchwork of desert woodlands farmlands and developed neighborhoods Once contiguous forests are now subdivided tallgrass prairies that extended for thousands of miles are now crisscrossed by highways and byways Whether the result of naturally occurring environmental changes or the product of seemingly unchecked human development fractured lands significantly impact the planet's biological diversity In *Ecology of Fragmented Landscapes* Sharon K Collinge defines fragmentation explains its various causes and suggests ways that we can put our lands back together Researchers have been studying the ecological effects of dismantling nature for decades In this book Collinge evaluates this body of research expertly synthesizing all that is known about the ecology of fragmented landscapes Expanding on the traditional coverage of this topic Collinge also discusses disease ecology restoration conservation and planning Not since Richard T T Forman's classic *Land Mosaics* has there been a more comprehensive examination of landscape fragmentation *Ecology of Fragmented Landscapes* is critical reading for ecologists conservation biologists and students alike

Conservation Biology Andrew S. Pullin, 2002-06-27 Conservation biology is fast emerging as a major new discipline which incorporates biological principles in the design of effective strategies for the sustainable management of populations species and entire ecosystems This beautifully illustrated textbook introduces students to conservation biology the science of preserving biodiversity It begins by taking the reader on a tour of the many and varied ecosystems of our planet providing a setting in which to explore the factors that have led to the alarming loss of biodiversity that we now see In particular the fundamental problems of habitat

loss and fragmentation habitat disturbance and the non sustainable exploitation of species in both aquatic and terrestrial ecosystems are explored The methods that have been developed to address these problems from the most traditional forms of conservation to new approaches at genetic to landscape scales are then discussed showing how the science can be put into practice *Imperial Sand Dunes Recreation Area Management Plan and Proposed Amendment to the California Desert Conservation Plan 1980* ,2003

Lagomorph Biology Paulo C. Alves,Nuno Ferrand,Klaus Hackländer,2007-12-29

Lagomorphs are a mammalian order which includes rabbits hares and pikas They are distributed throughout the world and are of both scientific and public interest as they are classified between endangered and pest species In addition some have a high economic value as important game species In the last few decades a huge amount of information was made available to the scientific community and resulted in remarkable advances on all aspects of Lagomorph biology However this information is dispersed in multiple scientific and non scientific journals This book provides an updated synthesis of the current knowledge on Lagomorph biology **Global Re-introduction Perspectives** IUCN/SSC Re-introduction Specialist Group,2008

Terrestrial Mammal Conservation: Global Evidence for the Effects of Interventions for Terrestrial Mammals Excluding Bats and Primates Nick A. Littlewood,Ricardo Rocha,Rebecca K. Smith,Philip A. Martin,Sarah L. Lockhart,Rebecca F. Schoonover,Elsbeth Wilman,Andrew J. Bladon,Katie A. Sainsbury,Stuart Pimm,William J. Sutherland,2020-11-30

Terrestrial Mammal Conservation provides a thorough summary of the available scientific evidence of what is known or not known about the effectiveness of all of the conservation actions for wild terrestrial mammals across the world excluding bats and primates which are covered in separate synopses Actions are organized into categories based on the International Union for Conservation of Nature classifications of direct threats and conservation actions Over the course of fifteen chapters the authors consider interventions as wide ranging as creating uncultivated margins around fields prescribed burning setting hunting quotas and removing non native mammals This book is written in an accessible style and is designed to be an invaluable resource for anyone concerned with the practical conservation of terrestrial mammals The authors consulted an international group of terrestrial mammal experts and conservationists to produce this synopsis Funding was provided by the MAVA Foundation Arcadia and National Geographic Big Cats Initiative Terrestrial Mammal Conservation is the seventeenth publication in the Conservation Evidence Series linked to the online resource www.ConservationEvidence.com Conservation Evidence Synopses are designed to promote a more evidence based approach to biodiversity conservation Others in the series include Bat Conservation Primate Conservation Bird Conservation and Forest Conservation and more are in preparation Expert assessment of the evidence summarised within synopses is provided online and within the annual publication What Works in Conservation Plant Variation and Evolution David Briggs,Stuart Max Walters,1997-11-13

Considers how the study of variation in plants has developed over the last 300 years **The Biology of Island Floras** David Bramwell,Juli Caujapé-Castells,2011-07-21 Oceanic islands offer biologists unparalleled opportunities to

study evolutionary processes and ecological phenomena However human activity threatens to alter or destroy many of these fragile ecosystems with recent estimates suggesting that nearly half of the world's insular endemics are threatened with extinction Bringing together researchers from around the world this book illustrates how modern research methods and new concepts have challenged accepted theories and changed our understanding of island flora Particular attention is given to the impact of molecular studies and the insights that they provide into topics such as colonisation radiation diversification and hybridisation Examples are drawn from around the world including the Hawaiian archipelago Galapagos Islands Madagascar and the Macronesian region Conservation issues are also highlighted with coverage of alien species and the role of ex situ conservation providing valuable information that will aid the formulation of management strategies and genetic rescue programmes

A Colour Atlas of Plant Propagation and Conservation Bryan Bowes, 1999-04-01 While scientific and socio political communities around the world are aware of the natural and economic importance of biodiversity we are faced with an ever increasing number of plant species under threat of extinction Conservation is thus a vital part of the plant scientist's work in the field in botanic gardens and in universities This colour

Averting Extinction Timothy W. Clark, Susan Gail Clark, 2005-05-01 The black footed ferret once thought extinct was rediscovered in Wyoming in 1981 In this book Tim Clark tells the story of subsequent efforts to save the black footed ferret showing how it points up the necessity of finding new ways to conserve and restore species According to Clark the problems facing conservation are not fundamentally biological but stem from human systems policy decisions organizational priorities and professional rivalries The focus in conservation he says must shift from science to practical problem solving Clark first describes and analyzes efforts to restore the black footed ferret after 1981 and looks at the processes people institutions and programs that were involved in that endeavor Finding that the ferret case illustrates many things that go wrong in the implementation of complex environmental policy Clark then proposes fresh approaches to endangered species recovery He gives guidelines for improving decisionmaking and development of policies for devising organizational strategies and structures that are more conducive to learning and for a new civic professionalism that will raise the standards for performance and better meet society's needs This policy oriented approach he contends will open up new avenues methods and hope for species recovery A very important work that will be widely read discussed and argued Steven J Bissell Colorado Division of Wildlife A valuable contribution to a general science policy field where clear and sophisticated thinking is rare Garry D Brewer School of Natural Resources and the Environment University of Michigan Ann Arbor

Fisheries Review, 1995 *Population Viability in Plants* Christy A. Brigham, Mark W. Schwartz, 2013-06-29 Providing a quantitative assessment of threatened plant populations that holds for varying management scenarios has become an essential part of conservation planning Here renowned plant ecologists provide information on major threats to plants when and where to conduct a plant viability assessment PVA what type of PVA to conduct what alternative options to PVA are available what information is required for which kind of viability assessment

what attributes of the population in question should be considered and what the limits of the PVA would be As such this volume can be used as a training tool for the environmental manager or a teaching aid for reviewing the current state of knowledge on plant population viability *Handbook for Restoring Tidal Wetlands* Joy B. Zedler, 2000-08-30 Efforts to direct the recovery of damaged sites and landscape date back as far as the 1930s If we fully understood the conditions and controlling variables at restoration sites we would be better equipped to predict the outcomes of restoration efforts If there were no constraints we could merely plant the restoration site and walk away However
