performance evaluation of adaptive detection of fluctuation radar targets and a C band radar over an urban area are introduced followed by the interpolation of the radial velocity data from coastal HF radars At the finish three dimensional synthetic aperture radar SAR mechanisms and imaging is introduced followed by GPU based SAR raw data simulation for a complex three dimensional scene This book will be of practical use to engineers technicians planners specifiers and managers who work with radar systems and with systems containing radars and radar technology Radar Technology Guy Kouemou,2010-01-01 In this book Radar Technology the chapters are divided into four main topic areas Topic area 1 Radar Systems consists of chapters which treat whole radar systems environment and target functional chain Topic area 2 Radar Applications shows various applications of radar systems including meteorological radars ground penetrating radars and glaciology Topic area 3 Radar Functional Chain and Signal Processing describes several aspects of the radar signal processing From parameter extraction target detection over tracking and classification technologies Topic area 4 Radar Subsystems and Components consists of design technology of radar subsystem components like antenna design or waveform design Signal Design for Modern Radar Systems Mohammad Alaee-Kerahroodi,Prabhu Babu,Mojtaba Soltanalian,M. R. Bhavani Shankar,2022-11-30 This book gives you a comprehensive overview of key optimization tools that can be used to design radar waveforms and adaptive signal processing strategies under practical constraints strategies such as power method like iterations coordinate descent and majorization minimization that help you to meet the more and more stressing sensing system requirements The book walks you through how radar waveform synthesis is obtained as the solution to a constrained optimization problem such as finite energy unimodularity or being constant modulus and finite or discrete phase potentially binary alphabet which are dictated by the practical limitations of the real systems Several approaches in each of these broad frameworks are detailed and various applications of these optimization techniques are described Focusing on a holistic approach rather than a problem specific approach the book shows you what you need to effectively formulate waveform design and understand the flexibility of the framework for adapting to your own specific needs You ll have full access to the tools and knowledge you need to design waveform with optimized correlation cross correlation properties for SISO SIMO and MIMO radars taking into account spectral constraints for cognitive rads as well as coexistence with communications and mitigate possible Doppler and quantization errors and more The book also includes representative software codes that further help you generate the described solutions With its unique style of covering mathematical results along with their applications from diverse areas this is a much needed detailed handbook for industry researchers scientists and designers including medical marine defense and automotive companies It is also an excellent resource for advanced courses on radar signal processing Modern Radar System Analysis David Knox Barton,1988 This book presents the basic principles analyses design formulas and characteristics of various fin line configurations You ll find summaries of hundreds of rigorous formulas as well as approximate closed form expressions which can be readily programmed to generate design data

for any structure Discover millimeter wave integrated circuits and components realized using the various fin line techniques presented in the text including directional couplers power dividers attenuators detectors modulators and oscillators An Artech House bestseller

Modern Radar Systems Hamish Meikle, 2008 This revised and updated edition to the popular Artech House book *Modern Radar Systems* offers complete and current coverage of the subject including new material on accuracy resolution and convolution and correlation The book features more than 540 illustrations drawn in Maple V that offer a greater understanding of various waveforms and other two and three dimensional functions to help you more accurately analyze radar system performance The effects of pulse shaping on transmitter stability and spectra are discussed a topic which is becoming more and more important in the age of electromagnetic compatibility The book addresses the importance of low attenuation and reflection between the main radio frequency blocks including the use of oversized waveguides for long runs

Interferometry in Radioastronomy and Radar Techniques R. Wohlleben, H. Mattes, Th. Krichbaum, 2012-12-06 In recent years aperture synthesis and interferometry have become very powerful tools in radioastronomy Investigation of distant galaxies for example have revealed structures with sizes of less than a kiloparsec In general the study of galaxies has benefited from the great power of these techniques Radar applications have also dramatically increased their quality by using the interferometry principle Tracking and airborne radar can now determine position and velocity of objects with a much higher accuracy This book describes in the first six short chapters the basics of interferometry and aperture synthesis The following two long chapters treat the aspects of radioastronomical interferometers and radar applications of interferometry in great detail The text offers readers a very good opportunity to familiarize themselves with the mathematical background of these very complex techniques For researchers and students in radioastronomy and electrical engineering

Signal Processing Techniques for Modern Radar Systems Mostafa Kamal Kamel Elhoshy, 2019 This dissertation considers radar detection and tracking of weak fluctuating targets using dynamic programming DP based track before detect TBD TBD combines target detection and tracking by integrating data over

consecutive scans before making a decision on the presence of a target A novel algorithm is proposed which employs order statistics in dynamic programming based TBD OS DP TBD to detect weak fluctuating targets The well known Swerling type 0 1 and 3 targets are considered with non Gaussian distributed clutter and complex Gaussian noise The clutter is modeled using the Weibull K and G0 distributions The proposed algorithm is shown to provide better performance than well known techniques in the literature In addition a novel expanding window multiframe EW TBD technique is presented to improve the detection performance with reasonable computational complexity compared to batch processing It is shown that EW TBD has lower complexity than existing multiframe processing techniques Simulation results are presented which confirm the superiority of the proposed expanding window technique in detecting targets even when they are not present in every scan in the window Further the throughput of the proposed technique is higher than with batch processing Depending on the range and azimuth resolution of the radar system the target may appear as a point in some radar systems and there will be target energy spillover in other systems This dissertation considers both extended targets with different energy spillover levels and point targets Simulation results are presented which confirm the superiority of the proposed algorithm in both cases
