Modern Snow Ice Techniques:

Encyclopedia of Snow, Ice and Glaciers Vijay P. Singh, Pratap Singh, Umesh K. Haritashya, 2011-06-29 The earth's cryosphere which includes snow glaciers ice caps ice sheets ice shelves sea ice river and lake ice and permafrost contains about 75% of the earth's fresh water. It exists at almost all latitudes from the tropics to the poles and plays a vital role in controlling the global climate system. It also provides direct visible evidence of the effect of climate change and therefore requires proper understanding of its complex dynamics. This encyclopedia mainly focuses on the various aspects of snow ice and glaciers but also covers other cryospheric branches and provides up to date information and basic concepts on relevant topics. It includes alphabetically arranged and professionally written comprehensive and authoritative academic articles by well known international experts in individual fields. The encyclopedia contains a broad spectrum of topics ranging from the atmospheric processes responsible for snow formation transformation of snow to ice and changes in their properties classification of ice and glaciers and their worldwide distribution glaciation and ice ages glacier dynamics glacier surface and subsurface characteristics geomorphic processes and landscape formation hydrology and sedimentary systems permafrost degradation hazards caused by cryospheric changes and trends of glacier retreat on the global scale along with the impact of climate change. This book can serve as a source of reference at the undergraduate and graduate level and help to better understand snow ice and glaciers. It will also be an indispensable tool containing specialized literature for geologists geographers climatologists hydrologists and water resources engineers as well as for those who are engaged in the practice of agricultural and civil engineering earth sciences environmental sciences and engineering ecosystem management and other relevant subjects.

Snow Removal and Ice Control Technology National Research Council (U.S.). Transportation Research Board, 1997 The objective of the symposium was to provide a forum for the exchange of information about state of the art research and technology applications to improve snow removal and ice control operations in transportation systems. Sixty one papers were presented in the areas of policy and management infrastructure and snow control materials and applications equipment travel surface environment and health road weather information systems and forecasting and safety and visibility. Papers were authored by maintenance engineers and researchers from Austria the Czech Republic Denmark Finland Germany Japan New Zealand the Netherlands Norway Russia Sweden the United Kingdom and the United States. Twenty one of these papers are included in this publication.
