Wine Wars Mike Veseth,2011-06-16 Writing with wit and verve Mike Veseth aka the Wine Economist tells the compelling story of the war

between the market trends that are redrawing the world wine map and the terroirists who resist them Wine and the wine business are at a critical crossroad today transformed by three powerful forces Veseth begins with the first force globalization which is shifting the center of the wine world as global wine markets provide enthusiasts with a rich but overwhelming array of choices Two Buck Chuck the second force symbolizes the rise of branded products like the famous Charles Shaw wines sold in Trader Joe s stores Branded corporate wines simplify the worldwide wine market and give buyers the confidence they need to make choices but they also threaten to dumb down wine sacrificing terroir to achieve marketable McWine reliability Will globalization and Two Buck Chuck destroy the essence of wine Perhaps but not without a fight Veseth argues He counts on the revenge of the terroirists to save wine s soul But it won t be easy as wine expands to exotic new markets such as China and the very idea of terroir is attacked by both critics and global climate change Veseth has grape expectations that globalization Two Buck Chuck and the revenge of the terroirists will uncork a favorable future for wine in an engaging tour de force that will appeal to all lovers of wine whether it be boxed bagged or bottled Membrane Processing Adnan Y. Tamime,2013-02-18 In the last two decades there have been significant developments in membrane filtration processes for the dairy and beverage industries The filtration systems can be classified into four main groups reverse osmosis nanofiltration ultrafiltration and microfiltration The primary objective of this book is to assess critically the pool of scientific knowledge available to the dairy and beverages industry as a tool for process and product innovation quality improvement and safety The book is divided into three main parts Part I reviews the principals developments and designs of membrane processes that are mainly used in commercial dairy and beverage applications Part II provides information on the applications of membrane processes in the manufacture of dairy products from on farm concentration of milk as a pre treatment for cheesemaking to fractionation of milk and whey to provide ingredients for food and other applications Part III considers membrane applications during the manufacture of fruit juices beer and cider wine and vinegar These include concentration deacidification and dealcoholisation processes Membrane Processing Dairy and Beverages Applications is an ideal new reference for dairy and beverage processors involved in the application of membranes both to aid the creation of novel products and to improve their process economics Students and lecturers of food and dairy science and technology will value its in depth discussion of membrane processes whilst readers based in the dairy industry will prize it as the most up to date and advanced volume yet published on this crucially important topic Alternative Food Networks for Sustainable, Just, Resilient and Productive Food Systems José Luis Vicente-Vicente,Lukas Egli,Felix Zoll,Simona Zollet,2024-10-01 There is growing evidence that the current globalised agri food system is neither sustainable nor resilient It is responsible for around one third of the global GHG emissions and is a major driver of biodiversity loss Furthermore its structure and distribution mode do not provide food security for all and foster socio economic inequalities between different parts of the planet Consequently an increasing number of scientists and members of the civil society are demanding a radical

transformation of agri food systems The creation of alternative food networks AFNs represent a possible first step towards agri food system transformation AFNs can incorporate local indigenous and innovative knowledge and bring together a diversity of actors to connect food production and consumption and create new practices and relationships around food The creation of AFNs and ultimately of Alternative Food Systems AFS should involve different actors from farmers to social movements from policymakers to scientists AFNs have the potential to contribute to a transformation towards sustainable just resilient and productive food systems but even though they have increased in numbers and organisational forms in recent years they still remain in a niche Consequently scientific evidence of their performance is still limited This research topic will contribute to a comprehensive multi scalar and critical e g including potential counter effects understanding of the current state and future potential of AFNs It will address multiple aspects ranging from social economic and environmental aspects to productivity participation and justice Moreover it will highlight the role of governance power relations and institutions as well as barriers and ways forward to promote AFNs and their role in food system transformation
