**Modular Instruction - an Alternative Strategy in Higher Education** Angela Boren, Sherrell Foree, 1978 Abstract An experimental model based on personalized modular instruction and competency objectives is described for teachers and students at the university level seeking an alternative to traditional educational methods The teacher is seen as a cooperator in all phases of the modular course from pre assessment to learning activity and reinforcement through post assessment The model was tested on 109 students and results were compared to those of 64 controls Students in the modular instruction group did not have significantly higher cognitive scores than controls but did have higher psychomotor scores Student response to the program was positive *Innovative Practices in Teaching Information Sciences and Technology* John M. Carroll, 2024-08-13 Information Sciences and Technology IST is a rapidly developing interdisciplinary area of university research and educational programs It encompasses artificial intelligence data science human computer interaction security and privacy and social informatics In both research and teaching IST ambitiously addresses interdisciplinary synergies across this broad foundation Many articles and books discuss innovative research practices in IST but innovations in teaching practices are less

systematically shared Although new programs and new faculty join IST each year they basically have only their own imaginations to draw upon in developing effective and appropriate innovative teaching practices This book presents essays by experienced faculty instructors in IST describing insights that emerged from teaching and learning classroom practice and that have been validated through classroom experience The book is intended to help develop and strengthen a community of practice for innovative teaching in IST     Domain-Specific Computer Architectures for Emerging Applications

Chao Wang,2024-06-04 With the end of Moore s Law domain specific architecture DSA has become a crucial mode of implementing future computing architectures This book discusses the system level design methodology of DSAs and their applications providing a unified design process that guarantees functionality performance energy efficiency and real time responsiveness for the target application DSAs often start from domain specific algorithms or applications analyzing the characteristics of algorithmic applications such as computation memory access and communication and proposing the heterogeneous accelerator architecture suitable for that particular application This book places particular focus on accelerator hardware platforms and distributed systems for various novel applications such as machine learning data mining neural networks and graph algorithms and also covers RISC V open source instruction sets It briefly describes the system design methodology based on DSAs and presents the latest research results in academia around domain specific acceleration architectures Providing cutting edge discussion of big data and artificial intelligence scenarios in contemporary industry and typical DSA applications this book appeals to industry professionals as well as academicians researching the future of computing in these areas
