*Proactive Strategies for Protecting Species* C. Josh Donlan,2015-03-20 Now forty years old the Endangered Species Act ESA remains a landmark act in conservation and one of the world s most comprehensive laws designed to prevent species extinctions and support recovery efforts for imperiled species A controversial law and often subject to political attack the ESA is successful overall but not without difficulties Those who enforce the ESA for example struggle to achieve viable recovery goals for many species At the forefront of challenges is a reactive framework that sometimes leads to perverse incentives and legal battles that strain support and resources Further few species have been delisted

*Proactive Strategies for Protecting Species* explores the perspectives opportunities and challenges around designing and implementing pre listing programs and approaches to species conservation This volume brings together conservation biologists economists private and government stakeholders and others to create a legal scientific sociological financial and technological foundation for designing solutions that incentivize conservation action for hundreds of at risk species prior to their potential listing under the ESA This forward thinking innovative volume provides a roadmap for designing species conservation programs on the ground so they are effective and take place upstream of regulation which will contribute to a reduction in lawsuits and other expenses that arise after a species is listed

*Proactive Strategies for Species Protection* is a guidebook for anyone anywhere interested in designing programs that incentivize environmental stewardship and species conservation
