Regulatory Peptides David R. Brown, 2012-12-06 Since the discovery of the pancreatic secretagogue secretin by W M BAYLISS and E H STARLING at the inception of the twentieth century intense interest has focused on numerous continually expanding classes of small peptides which appear to serve as regulatory molecules in the gastrointestinal tract brain and other organ systems Initially many of these substances were like secretin discovered in functional assays as factors or activities extractable in minute quantities from tissues or tissue fluids By the middle of the century advances in biochemical and immunological methods for the purification characterization and quantification of biologically active peptides in organ systems tissues and body fluids provided further impetus to this field It was readily appreciated that small biologically active peptides were particularly abundant in the digestive tract Many peptides such as vasoactive intestinal peptide gastrin and more recently peptide YY and galanin were in fact originally discovered in and isolated from gut tissue Moreover these peptides were found to have profound actions on the gastroenteropancreatic system in vivo and in vitro During the past 2 decades information on regulatory peptides has burgeoned as a result of technological refinements in the synthesis of

peptides improved methods for detecting and visualizing peptides and their precursors in cells and tissues from a variety of species advances in the functional assessment of peptide activity and the application of molecular biological techniques to the characterization of peptide gene structure and expression [Current Catalog](#) National Library of Medicine (U.S.),1985 First multi year cumulation covers six years 1965-70 **Remediation Engineering of Contaminated Soils** Donald L. Principles of Perinatal-Neonatal Metabolism Richard M. Cowett,2012-12-06 Over the last quarter century or so specialization within obstetrics and gynecology and pediatrics has resulted in the development of the disciplines of maternal fetal medicine and neonatology respectively A primary focus of maternal fetal medicine has been to understand the mechanism s of premature delivery and develop treatment modalities for improving the length of gestation A primary focus of neonatology has been to under stand the causes of respiratory distress in the neonate Success has resulted not only in the lengthening of gestation but an improved understanding of the causes and treatment of neonatal respiratory disease With increasing success has come the necessity to under stand the metabolic principles of the parturient the fetal placenta unit and the neonate These principles are clearly very important from multiple aspects Increased understand ing of metabolism of the pregnant woman would explain the aberrations occurring in normal and abnormal pregnancy and improve nutritional support for the parturient A prime example of altered metabolism is the parturient with diabetes Understanding metabolism ofthe fetal placenta unit is necessary to increase the probability that the fetus will be born appropriate for size irrespective of the gestational age The various compo nents of neonatal metabolism are important not only for understanding the changes in physiology and biochemistry occurring in the developing neonate but the principles by which nutritional support should be provided
