**Molecular Basis of Oral Microbial Adhesion** Stephan E. Mergenhagen, Burton Rosan, *Molecular Basis of Oral Microbial Adhesion* Stephan E. Mergenhagen, Burton Rosan, 1985 **Bacterial Adhesion to Cells and Tissues** Itzhak Ofek, Ronald J. Doyle, 2012-12-06 Attachment to host cells or tissues is often the first step in the establishment of bacterial infections A complex array of recognition attachment and virulence factors is involved in this process which recent research has greatly illuminated This comprehensive and authoritative volume discusses the specific cell and tissue specific affinities of pathogenic microorganisms including bioinorganic surfaces such as teeth and is an essential reference for researchers and students of host pathogen interactions *Bacterial Adhesion* Madilyn Fletcher, 1996-09-21 BACTERIAL ADHESION Molecular and Ecological Diversity Edited by Madilyn Fletcher Over the last twenty years research has revealed the enormous complexity underlying the phenomenon of bacterial adhesion The initial research goal was to understand the mechanism of attachment and its effects on the bacteria as well as the host As research progressed however it became evident that many different attachment mechanisms exist These diverse forms of adhesion are the results of numerous evolutionary pressures and each may be part of a larger behavioral strategy This comprehensive overview details how diversity in habitat and ecological requirements has led to enormous variety in adhesive cell components underlying genetic determinants and behavioral strategies It presents the latest research on adhesion mechanisms and strategies found in diverse environments and microorganisms including the new environment of biomaterials Bacterial Adhesion Molecular and Ecological Diversity examines adhesion as a strategy for nutrient access and as a phase in the complex behavior of life cycle processes It covers the latest research and innovative approaches in the field including Conceptual advances in research on the adhesion of bacteria to oral surfaces Enhancing colonization in a fluctuating environment The cellulosome a cell surface organelle for the adhesion to and degradation of cellulose *Pseudomonas aeruginosa* versatile attachment mechanisms Sensing response and adaptation to surfaces Myxococcus coadhesion and role in the life cycle Edited by a leading authority on bacterial adhesion and featuring contributions from the field's leading experts this book speaks to researchers in all areas of microbiology biotechnology environmental technology and environmental science as well as to immunology and infectious diseases Bacterial Adhesion Molecular and Ecological Diversity is the latest addition to the Wiley Series in Ecological and Applied Microbiology Recent books in the series include Microbial Transformation and Degradation of Toxic Organic Chemicals edited by Lily Y Young and Carl E Cerniglia Wastewater Microbiology by Gabriel Bitton Environmental Microbiology edited by Ralph Mitchell Biotechnology in Plant Disease Control edited by Ilan Chet Antarctic Microbiology edited by E Imre Friedmann Effects of Acid Rain on Forest Processes edited by Douglas L Godbold and Aloys Huttermann **Adhesion of Oral Microbes to Dental Fiber Reinforced Composites** Johanna Tanner, 2003 **Advances in Microbial Ecology** K.C. Marshall, 2012-12-06 Advances in Microbial Ecology was established by the International Committee

on Microbial Ecology ICOMÉ to provide a vehicle for in depth critical and even provocative reviews to emphasize recent trends in the important field of microbial ecology Advances in Microbial Ecology is now recognized as a major source of information and inspiration both for practicing and for prospective microbial ecologists Most reviews appearing in Advances have been prepared by leaders in particular areas following invitations issued by the Editorial Board Individuals are encouraged however to submit outlines of unsolicited contributions to any member of the Editorial Board for consideration for publication in Advances With the publication of Volume 12 of Advances in Microbial Ecology there will be a change of Editor and the entire Editorial Board The current Editor wishes to take this opportunity to thank the present Editorial Board Ron Atlas Bo Barker Jørgensen and Gwyn Jones as well as past members of the Board for their assistance and encouragement over the years The new Editor of Advances in Microbial Ecology will be Gwyn Jones with Bernhard Schink Warwick F Vincent and David M Ward as members of the Editorial Board The outgoing Board wish the new Board every success in continuing the traditions established by Martin Alexander the founding Editor of Advances in Microbial Ecology The topics featured in Volume 12 of Advances include some related to the metabolic activities of bacteria namely bioremediation of oil spills by R M Atlas and R Microbial Biofilms Hilary M. McGinnis, 2012-12-06 *Biomedical Index to PHS-supported Research*, 1987 **Bacterial Adhesion to Host Tissues** Michael Wilson, 2010-01-28 This book is about the adhesion of bacteria to their human hosts Although adhesion is essential for maintaining members of the normal microflora in on their host it is also the crucial first stage in any infectious disease It is important therefore to fully understand the mechanisms underlying bacterial adhesion so that we may be able to develop methods of maintaining our normal protective microflora and of preventing pathogenic bacteria from initiating an infectious process These topics are increasingly important because of the growing prevalence of antibiotic resistant bacteria and consequently the need to develop alternative approaches for the prevention and treatment of infectious diseases This book describes the bacterial structures responsible for adhesion and the molecular mechanisms underlying the adhesion process It also deals with the consequences of adhesion for both the adherent bacterium and the host cell tissue to which it has adhered Cumulated Index Medicus, 1987 Postdoctoral Research Fellowship Opportunities National Institutes of Health (U.S.), 1995 *Research Awards Index*, 1989 *National Institute of Dental Research Indexes*, 1984 Listings of extramural and intramural projects Information provided is project number subject investigator and laboratory branch *Periodontal Medicine and Systems Biology* Brian Henderson, Michael Curtis, Robert Seymour, Nikolaos Donos, 2009-07-07 This book provides a systems based approach to periodontology and offers a scientific roadmap of the interactions which can lead to periodontal disease The

content is divided into five sections The first introduces the reader to the concept of systems theory and its mathematical foundation The second section provides the reader with a current view of periodontal medicine including the microbiology molecular genetics relationship to systemic disease and current and future therapies Periodontitis is caused by members of the oral microbiota and the third section provides the reader with various views of the relationship of the microbiota to the host The fourth section moves from the bacterium to the host and its immune responses to altered host bacteria interactions The final section deals specifically with bone destruction in periodontitis and brings the reader up to date with the current view of the control network that exists between mesenchymal cells such as osteoblasts immune cells and osteoclast precursor cells that controls bone remodelling in health and disease
