Barry, 1973 Genes structures within cells that control heredity The molecular structure of cells The molecular structure of genes How genes make copies of themselves How genes control the formation of other cell molecules The regulation of gene activity **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1973 First multi year cumulation covers six years 1965 70 *The Concept of the Gene in Development and Evolution* Peter J. Beurton, Raphael Falk, Hans-Jörg Rheinberger, 2000-05-29 Advances in molecular biological research in the latter half of the twentieth century have made the story of the gene vastly complicated the more we learn about genes the less sure we are of what a gene really is Knowledge about the structure and functioning of genes abounds but the gene has also become curiously intangible This collection of essays renews the question what are genes Philosophers historians and working scientists re evaluate the question in this volume treating the gene as a focal point of interdisciplinary and international research It will be of interest to professionals and students in the philosophy and history of science genetics and molecular biology Medical Books and Serials in Print, 1979 R.
