Molecular Diversity In Drug Design:

Molecular Diversity in Drug Design P.M. Dean,R.A. Lewis,2007-05-08 High throughput screening and combinatorial chemistry are two of the most potent weapons ever to have been used in the discovery of new drugs At a stroke it seems to be possible to synthesise more molecules in a month than have previously been made in the whole of the distinguished history of organic chemistry Furthermore all the molecules can be screened in the same short period However like any weapons of immense power these techniques must be used with care to achieve maximum impact The costs of implementing and running high throughput screening and combinatorial chemistry are high as large dedicated facilities must be built and staffed In addition the sheer number of chemical leads generated may overwhelm the lead optimisation teams in a hail of friendly fire Mother nature has not entirely surrendered as the number of building blocks that could be used to build libraries would require more atoms than there are in the universe In addition the progress made by the Human Genome Project has uncovered many proteins with different functions but related binding sites creating issues of selectivity Advances in the new field of pharmacogenomics will produce more of these challenges There is a real need to make hi throughput screening and combinatorial chemistry into smart weapons so that their power is not dissipated That is the challenge for modellers computational chemists cheminformaticians and IT experts In this book we have broken down this grand challenge into key tasks

Genetic Algorithms in Molecular Modeling James Devillers, 1996-06-07 Genetic Algorithms in Molecular Modeling is the first book available on the use of genetic algorithms in molecular design This volume marks the beginning of an new series of books Principles in Qsar and Drug Design which will be an indispensable reference for students and professionals involved in medicinal chemistry pharmacology ecotoxicology and agrochemistry Each comprehensive chapter is written by a distinguished researcher in the field Through its up to the minute content extensive bibliography and essential information on software availability this book leads the reader from the theoretical aspects to the practical applications It enables the uninitiated reader to apply genetic algorithms for modeling the biological activities and properties of chemicals and provides the trained scientist with the most up to date information on the topic Extremely topical and timely Sets the foundations for the development of computer aided tools for solving numerous problems in QSAR and drug design Written to be accessible without prior direct experience in genetic algorithms *Chemoinformatics* Jürgen Bajorath, 2008-02-04 In the literature several terms are used synonymously to name the topic of this book chem chemi or chemo informatics A widely recognized definition of this discipline is the one by Frank Brown from 1998 1 who defined chemoinformatics as the combination of all the information resources that a scientist needs to optimize the properties of a ligand to become a drug In Brown's definition two aspects play a fundamentally important role design support by computational means and drug discovery which distinguishes it from the term chemical informatics that was introduced at least ten years earlier and described as the application of information technology to chemistry not with a specific focus on drug discovery In addition there is of course chemometrics which is generally understood as the application of statistical methods to chemical data and the derivation of relevant statistical models and descriptors 2 The pharmaceutical focus of many developments and efforts in this area and the current popularity of gene to drug or similar paradigms is further reflected by the recent introduction of such terms as discovery informatics 3 which takes into account that gaining knowledge from

chemical data alone is not sufficient to be ultimately successful in drug discovery. Such insights are well in accord with other views that the boundaries between bio and chemoinformatics are fluid and that these disciplines should be closely combined or merged to significantly impact biotechnology or pharmaceutical research. 4
