Oxygen/Nitrogen Radicals: Cell Injury and Disease Val Vallyathan, Vince Castranova, Xianglin Shi, 2012-12-06 A veritable mountain of literature has been published showing the causal relationship of reactive oxygen nitrogen species in human disease conditions and there has been an explosion in the understanding of oxidative stress the protective role of antioxidants and molecular events involved in the regulation of transcription editing and translation of key events leading to disease processes Strategies need to be developed for prevention of diseases by allowing scientists and clinicians to obtain information on new and emerging advances The molecular mechanisms involved in several diseases including Alzheimer s disease atherosclerosis diabetes arthritis and Parkinson s disease as well as disorders of the eye skin cardiac and pulmonary systems are discussed in this volume along with scientific evidence supporting the value of dietary supplementation with antioxidants in the prevention of cellular damage leading to chronic disease Special in vivo techniques are also discussed at length along with the role of molecular studies in human risk assessment

Control of Gene Expression by Catecholamines and the Renin-Angiotensin System Heinz Rupp, Bernhard Maisch, 2012-12-06 The special issue of Molecular and Cellular Biochemistry focuses on Control of

Gene Expression by Catecholamines and the Renin Angiotensin System in health and disease In recent years great progress has been made in the understanding of catecholamine and angiotensin II modulated gene expression There is also increasing evidence that catecholamine and angiotensin II induced cellular injury not solely arises from classical pathways but also from a perturbed gene expression Taking into account that catecholamines and angiotensin II are vital for a balanced gene expression of many cells the intriguing possibility arises that various disease are initiated or aggravated by such an imbalance Catecholamine and angiotensin II influences can be in excess arising from for example hypercaloric food intake or psychosocial stress During early progression of heart failure sympathetic activity and angiotensin II influences also become increased Due to beta adrenergic receptor downregulation depressed catecholamine influences are expected in the final stage of heart failure An imbalanced influence of catecholamines and angiotensin II on gene expression leads to disordered molecular structures of the cell and an impaired cell function This focused issue is organized into chapters concentrating on catecholamines angiotensin II and the interaction between catecholamines and angiotensin II Basic biochemical processes are covered in detail and the potential of these pathways for explaining chronic diseases associated with excess catecholamine and angiotensin II influences should become apparent It is hoped that this focussed issue triggers novel research into the development of drugs that are targeted at diseases characterized by an imbalanced gene expression involving catecholamines and angiotensin II

Cardiac Cell Biology Elissavet Kardami,Larry Hryshko,Nasrin Meseali,2013-06-29 Cardiac cell biology has come of age Recognition of activated or modified signaling molecules by specific antibodies new selective inhibitors and fluorescent fusion tags are but a few of the tools used to dissect signaling pathways and cross talk mechanisms that may eventually allow rational drug design Understanding the regulation of cardiac

hypertrophy in all its complexity remains a fundamental goal of cardiac research Since the advancement of adenovirally mediated gene transfer transfection efficiency is no longer a limiting factor in the study of cardiomyocytes A limiting factor in considering cell transplantation as a strategy to repair the damaged heart is cell availability at the right time Cardiac gap junctions intercellular communication channels that allow electrical and metabolic coupling and play an important role in arrhythmogenesis are now understood to be exquisite sensors of cardiac change The reports in this volume include elegant studies that made use of cutting edge technological advances and many specialized reagents to address these issues

Cellular Lipid Binding Proteins Jan Jansen, 2012-12-06 It is well established that cellular lipid binding proteins serve central roles in cellular lipid uptake and metabolism Evidence has been presented that various metabolic diseases such as hyperlipidemia atherosclerosis insulin resistance and diabetes are characterized by malfunctioning or deficiencies in cellular lipid binding proteins For better understanding of the action of lipids as signaling compounds and the role of lipids in intermediary metabolism it is essential to have detailed knowledge of the interactions between lipids and their cognate binding proteins In view of this growing interest in lipid protein interaction the 4th International Conference on Lipid Binding Proteins was held in Maastricht The Netherlands in June 2001 The proceedings of the previous three meetings have been published in Molecular and Cellular Biochemistry The present focused issue of Molecular and Cellular Biochemistry comprises selected papers based on the lectures and posters presented during the 4th conference and provides insight into the significance of these proteins for the functioning of the cell
