malignancies Explains regulatory aspects behind the development and approval of immunotherapy drugs      Cancers in Different Conditions, Cancer Research Methods and Diagnosis: An Interdisciplinary Approach Nima Rezaei, 2025-07-01 The Cancers in Different Conditions Cancer Research Methods and Diagnosis An Interdisciplinary Approach is the nineteenth volume of the Interdisciplinary Cancer Research series publishes a series of chapters on cancer research methods and diagnosis in different conditions The volume starts with a chapter on cancer in patients with autism spectrum disorder followed by a chapter on relation of cancer and Alzheimer s disease After a chapter on transplant oncology and a chapter on the role of geriatric assessment in cancer treatment cancer development in inborn errors of immunity celiac disease and diabetes mellitus are discussed Patient derived organoids were the subject of next chapter The subsequent chapters are focused on research methods and new targets in vitro models and energy metabolism in cancer research Advances in biomedical imaging modalities including nuclear medicine and PET imaging for cancer research and diagnostics are explained in other chapters Finally strength of biomaterials and nanomedicines in cancer research are discussed in final chapters This is the main concept of Cancer Immunology Project CIP which is a part of Universal Scientific Education and Research Network USERN This interdisciplinary book will be of special value for those who wish to have an update on cancer research methods and diagnosis      Novel Biomarkers for Predicting Response to Cancer Immunotherapy Jinghua Pan, Fu Wang, Jian Song, 2023-07-11 Immunotherapy has revolutionized the treatment of malignancies Targeting of immune checkpoints cytotoxic T lymphocyte associated protein 4 programmed cell death protein 1 PD 1 and its ligand PD L1 has led to improving survival in a subset of patients Despite their remarkable success clinical benefit remains limited to only a subset of patients A significant limitation behind these current treatment modalities is an irregularity in clinical response which is especially pronounced among checkpoint inhibition Currently relevant predictors of cancer immunotherapy response include microsatellite instability high deficient mismatch repair MSI H dMMR expression of PD L1 tumor mutation burden TMB immune genomic characteristics and tumor infiltrating lymphocytes TILs However none of them have sufficient evidence to be a stratification factor Moreover as the combined strategies for effective cancer immunotherapy had been developed in multiple tumors such as Immunotherapy combined with chemotherapy radiotherapy targeted therapy and anti angiogenesis therapy Therefore the development of novel biomarkers endowed with high sensitivity specificity and accuracy able to identify which patients may truly benefit from the treatment with cancer immunotherapy would allow to refine the therapeutic selection and to better tailor the treatment strategy      Green Synthesis of Nanomaterials: Cytotoxicity and Drug Delivery Mina Sarani, Abolfazl Heydari, Majid Darroudi, 2023-09-13 Over the past few decades the increasing requirement for green chemistry and nanotechnology led to the adoption of green synthetic routes for the synthesis of nanomaterials using plants microorganisms and others Hence the green synthesis of nanomaterials has been considered by researchers through an eco friendly path which has led to much research in recent years on the synthesis of nanomaterials using plants as a non

toxic cost effective accessible easy and environmentally friendly synthetic pathway Synthesized nanomaterials through green chemistry are non toxic and can be a good choice for medical applications such as drug delivery imaging biotechnology and biomedical In the case of drug delivery these nanomaterials can be a launching pad for the treatment of many diseases such as cancer The synthesis of nanomaterials will be done with widely synthetic routes including physical chemical and biosynthetic routes which are very usual Commonly the used chemical methods are too expensive and employ hazardous and toxic chemicals which impose various risks to the environment The biosynthetic route is a safe biocompatible environment friendly green approach to synthesize nanomaterials using plants and microorganisms for biomedical applications This synthesis can be carried out with fungi algae bacteria and plants etc Some parts of plants such as leaves fruits roots stems seeds have been used for the synthesis of various nanomaterials According to the unique characters of green synthesized nanomaterials they can be a very suitable choice for medical applications such as drug delivery imaging MRI and etc with the purpose of treating a variety of diseases
