Molecular Aspects Of Transport Proteins New Comprehensive Biochemistry S:

Molecular Aspects of Transport Proteins J.J.H.H.M. de Pont, 1992-11-20 The development of molecular biological techniques and their application in the field has given a new dimension to the area of membrane transport The combination of biochemical site specific reagents molecular biological site directed mutagenesis and genetic approaches of which this volume gives numerous examples in combination with biophysical techniques as X ray analysis and NMR will eventually lead to a complete elucidation of the mechanism of action of these transport proteins Although impossible to give a comprehensive overview of this rapidly expanding field the expert contributors discuss pumps involved in primary active transport carriers which transport metabolites and channels which allow selective passive transport of particular ions This volume is ideal for teachers students and investigators in this field and will lead to further progress in our understanding of this fascinating field *New Comprehensive Biochemistry*, 1981 **Current Catalog** National Library of Medicine (U.S.), 1993 First multi year cumulation covers six years 1965 70 **The Physiology of Excitable Cells** David J. Aidley, 1998-09-03 The fourth edition of this highly successful text has been extensively revised and restructured to take account of the many recent advances in the subject and bring it right up to date The classic observations of recent years can now be interpreted with the powerful new techniques of molecular biology Consequently there is much new material throughout the book including many new illustrations and extensive references to recent work Its essential philosophy remains the same though fundamental concepts are clearly explained and key experiments are examined in some detail This textbook will be used by students of physiology neuroscience cell biology and biophysics Specializing undergraduates and graduates as well as lecturers and researchers will find the text thorough and clearly written **Biomembrane Transport** Lon J. Van Winkle, 1999-05-20 Biomembrane Transport covers the fundamental principles of biomembrane transport proteins including thermodynamics and kinetics structure and catalytic mechanism and regulation and integration classification The book considers recent advances in transport protein structure and function along with established concepts The importance of biomembrane transport to regulation and interorgan nutrient flows and metabolism is covered as well as classical and modern techniques for characterizing transport The book also contains a classification scheme for all known transport proteins according to their functions and amino acid residue sequence similarities Considers recent advances in transport protein structure and function along with established concepts Distinguishes the similarities and differences in the mechanisms of action of transport proteins Provides an up to date discussion of the thermodynamics and kinetics of biomembrane transport Discusses regulation of biomembrane transport Details the importance of biomembrane transport to regulation and interorgan nutrient flows and metabolism Contains a classification scheme for all known transport proteins according to their functions and amino acid residue sequence similarities Presents classical and modern techniques for characterizing transport **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1991

Glatz, Ger J. van der Vusse, 2012-12-06 Twenty years have elapsed since cytoplasmic proteins exhibiting high affinity binding of long chain fatty acids were first identified Ockner et al Science 177 56 58 1972 These cellular fatty acid binding proteins FABPs are now well established to comprise a ligand defined group of macromolecules belonging to a family of cytoplasmic lipid binding proteins Unique

features of the FABPs are the existence of distinct types of FABP and that these are found in a variety of tissues in remarkable abundance with some cells expressing more than one type The physiological significance of the FABPs has only partly been elucidated By increasing the cytoplasmic solubilization of fatty acids the cellular FABPs are considered to function primarily in intracellular fatty acid transport but may also be assigned important regulatory roles in cellular lipid homeostasis as well as in the modulation of cell growth and differentiation The broad interests in cellular FABPs has led to the organization of the 1st International Workshop on Fatty Acid Binding Protein held in Maastricht the Netherlands in 1989 Prompted by the success of the first meeting the 2nd International Workshop on Fatty Acid Binding Proteins which was held again in Maastricht on August 31 and September 1 1992 brought together scientific specialists in the field of FABP research for two days of intensive and fruitful discussion This volume is a collection of selected papers from this conference and thus provides the state of the art knowledge of cellular FABPs The contributors to this issue represent pioneering as well as new investigators and also reflect the multidisciplinary nature of research in this exciting and rapidly progressing field
