Molecular Biology Of Opportunistic Infections In Aids:

Molecular and Cell Biology of Opportunistic Infections in AIDS S. Myint,A. Cann,2012-12-06 Human immunodeficiency virus and AIDS have received much attention in the last decade As the major cause of death in young adults this concern is merited AIDS has also ushered onto the clinical agenda a number of unusual and interesting pathogens These have had considerably less attention than the virus itself but are arguably as important This book attempts to put into one volume a state of the art review of the basic biology of these opportunistic organisms When compiling this book the perceived difficulty was deciding how to restrict the number of chapters as there is a large number of opportunistic organisms It soon became clear however that the chapters would select themselves as the work on many of these organisms was still in its infancy We can be criticized for including Salmonella which is not thought to be an opportunistic infection and excluding Cryptococcus Our defence is that the former has an interesting relationship with HIV and the latter is one of those organisms for which the basic biology is still in its early stages The authors are all active researchers in their respective fields and we are grateful that they managed to review their subjects in the short turn around time required for a book such as this not to be needlessly outdated on publication We hope that if nothing else this book stimulates interest and more research on these agents

perhaps in future editions there will be much more to describe on their molecular biology Biomedical Index to PHS-supported Research: pt. A. Subject access A-H ,1992 *Hiv/Aids: Molecular and Cell Biology of Opportunistic Infections* Eliza Blair,2023-09-26 The human immunodeficiency virus HIV causes a life threatening condition known as acquired immune deficiency syndrome AIDS The first stage of HIV infection is acute infection following latency and then AIDS which is the last and critical stage Patients of AIDS generally have fully dysfunctional immune systems and they acquire a number of severe illnesses known as opportunistic infections OIs These illnesses occur in HIV patients with greater severity Various OIs include tuberculosis TB pneumonia toxoplasmosis salmonella infection and candidiasis These infections are caused by various germs which can be transmitted through contaminated water and food body fluids and air AIDS normally takes years to grow following an infection with the human immunodeficiency virus HIV Infected AIDS patients are more likely to acquire cancers such as Kaposi s sarcoma cervical cancer and cancers caused by damaged immune system known as lymphomas AIDS patients can benefit from certain medications like antiretroviral medicines This book contains some path breaking studies on the molecular and cell biology of opportunistic infections in HIV AIDS It will provide comprehensive knowledge to the readers This book will serve as a reference to a broad spectrum of readers **Biomedical Index to PHS-supported Research** ,1993 *NIH Guide for Grants and Contracts* ,1989 **NIH Guide for Grants and Contracts** National Institutes of Health (U.S.), **NIH Almanac** National Institutes of Health (U.S.).
