Molluscan Systematics And Biostratigraphy:

Molluscan Systematics and Biostratigraphy Jeffrey D. Stilwell, William J. Zinsmeister, 1992-04-08 An investigation of the La Meseta Formation of Seymour Island Antarctic Peninsula was initiated to provide a detailed systematic catalogue of the molluscan fauna and to utilize the data to establish a biostratigraphical zonation of the shallow water shelf faunas for the early Tertiary of Antarctica Proceedings, Symposium 'Molluscan Palaeontology', 11th International Malacological Congress, Siena, Italy, 30th August-5th September 1992, 1993

Brachiopods Paul Copper, 2018-02-02 This collection of conference papers presents information on the molecular genetics biomineralization growth and ecology of extant brachiopod stocks extrapolated back to the Cambrian and the shell microstructure taphonomy paleogeography evolution and taxonomy of fossil brachiopods

The Vegetation of Antarctica Through Geological Time David J. Cantrill, Imogen Poole, 2012-11-22 Looks at the fossil plant history of Antarctica and its relationship to the global record of environmental and climate change

Atmospheric Halos Walter Tape, 2013-03-15 Published by the American Geophysical Union as part of the Antarctic Research Series Volume 64 Archdeacon Stuck was seeing halos formed in moonlight Their daytime counterparts are surprisingly common not only in the arctic but in temperate climates as well Many halos are possible forming arcs of colored or white light almost anywhere in the sky Their occasional brilliance variety and exotic shapes have impressed skywatchers for centuries This book introduces halos and tries to convey some of their beauty It tells much of what is known about them how they arise how so many are possible and why some are rare while others occur every few days or so No such insights of course are necessary for the enjoyment of a halo display indeed an elaborate display is one of Nature's wonders Nevertheless understanding can add to enjoyment especially since the makings of a great display turn out to be as remarkable as the display itself

Cold-Water Corals and Ecosystems André Freiwald, J. Murray Roberts, 2006-01-17 Following the exciting exploration of hot vent and cold seep ecosystems the rediscovery of cold water coral ecosystems with high technology instrumentation is currently another hot topic in multidisciplinary marine research Conventionally coral reefs are regarded as restricted to warm and well illuminated tropical seas not associated with cold and dark waters of higher latitudes However ongoing scientific missions have shed light on the global significance of this overlooked ecosystem Cold water coral ecosystems are involved in the formation of large seabed structures such as reefs and giant carbonate mounds and they represent unexploited paleo environmental archives of earth history Like their tropical cousins cold water coral ecosystems harbour rich species diversity Despite the great water depths commercial interests overlap more and more with the coral occurrences Human activities already impinge directly on cold water coral reefs causing severe damage to this vulnerable ecosystem In this volume the current key institutions involved in cold water coral research have contributed 62 state of the art articles from geology and oceanography to biology and conservation

Frozen in Time Jeffrey D Stilwell, John A Long, 2011-10-12 No other continent on Earth has undergone such radical environmental changes as

Antarctica In its transition from rich biodiversity to the barren cold land of blizzards we see today Antarctica provides a dramatic case study of how subtle changes in continental positioning can affect living communities and how rapidly catastrophic changes can come about Antarctica has gone from paradise to polar ice in just a few million years a geological blink of an eye when we consider the real age of Earth Frozen in Time presents a comprehensive overview of the fossil record of Antarctica framed within its changing environmental settings providing a window into a past time and environment on the continent It reconstructs Antarctica's evolving animal and plant communities as accurately as the fossil record permits The story of how fossils were first discovered in Antarctica is a triumph of human endeavour It continues today with modern expeditions going out to remote sites every year to fill in more of the missing parts of the continent's great jigsaw of life

Cretaceous-Tertiary High-latitude Palaeoenvironments Jane E. Francis, Duncan Pirrie, J. Alistair Crame, 2006 High latitude settings are sensitive to climatically driven palaeoenvironmental change and the resultant biotic response Climate change through the peak interval of Cretaceous warmth Late Cretaceous cooling onset and expansion of the Antarctic ice sheet and subsequently the variability of Neogene glaciation are all recorded within the sedimentary and volcanic successions exposed within the James Ross Basin Antarctica This site provides the longest onshore record of Cretaceous Tertiary sedimentary and volcanic rocks in Antarctica and is a key reference section for Cretaceous Tertiary global change The sedimentary succession is richly fossiliferous yielding diverse invertebrate vertebrate and plant fossil assemblages allowing the reconstruction of both terrestrial and marine systems The papers within this volume provide an overview of recent advances in the understanding of palaeoenvironmental change spanning the mid Cretaceous to the Neogene of the James Ross Basin and related biotic change and will be of interest to many working on Cretaceous and Tertiary palaeoenvironmental change

Antarctic Journal of the United States, 1997 *The Transantarctic Mountains* Gunter Faure, Teresa M. Mensing, 2010-09-21 This book presents a summary of the geology of the Transantarctic Mountains for Earth scientists who may want to work there or who need an overview of the geologic history of this region In addition the properties of the East Antarctic ice sheet and of the meteorites that accumulate on its surface are treated in separate chapters The presentation ends with the Cenozoic glaciation of the Transantarctic Mountains including the limnology and geochemical evolution of the saline lakes in the ice free valleys The subject matter in this book is presented in chronological order starting about 750 million years ago and continuing to the present time The chapters can be read selectively because the introduction to each chapter identifies the context that gives relevance to the subject matter to be discussed The text is richly illustrated with 330 original line drawings as well as with 182 color maps and photographs The book contains indexes of both subject matter and

of authors names that allow it to be used as an encyclopedia of the Transantarctic Mountains and of the East Antarctic ice sheet Most of the chapters are supplemented by Appendices containing data tables additional explanations of certain phenomena e g the formation and seasonal destruction of stratospheric ozone and illustrative calculations e g ^{38}Cl dates of meteorites The authors have spent a combined total of fourteen field seasons between 1964 and 1995 doing geological research in the Transantarctic Mountains with logistical support by the US Antarctic Program Although Antarctica is remote and inaccessible tens of thousands of scientists of many nationalities and their assistants have worked there and even larger numbers of investigators will work there in the future

Mesozoic Mammals from South America and Their Forerunners Guillermo W. Rougier, Agustín G. Martinelli, Analía M. Forasiepi, 2021-02-22 This book summarizes the most relevant published paleontological information supplemented by our own original work on the record of Mesozoic mammals evolution their close ancestors and their immediate descendants Mammals evolved in a systematically diverse world amidst a dynamic geography that is at the root of the 6 500 species living today Fossils of Mesozoic mammals while rare and often incomplete are key to understanding how mammals have evolved over more than 200 million years Mesozoic mammals and their close relatives occur in a few dozen localities from Argentina Brazil Chile Bolivia and Peru spanning from the Mid Triassic to the Late Cretaceous with some lineages surviving the cataclysmic end of the Cretaceous period into the Cenozoic of Argentina There are roughly 25 recognized mammalian species distributed in several distinctive lineages including australosphenidans multituberculates gondwanatherians eutriconodonts amphilestids and dryolestoids among others With its focus on diversity systematics phylogeny and their impact on the evolution of mammals there is no similar book currently available

Macroecology: Concepts and Consequences British Ecological Society. Symposium, 2003-08 Macroecology Concepts and Consequences brings together for the first time major researchers in the field to present overviews of current thinking about the form and determinants of macroecological patterns Each section presents different viewpoints on the answer to a key question in macroecology such as why are most species rare why are most species small bodied and why are most species restricted in their distribution

Antarctic Climate Evolution Fabio Florindo, Martin Siegert, Laura De Santis, Tim Naish, 2021-11-04 Antarctic Climate Evolution Second Edition enhances our understanding of the history of the world's largest ice sheet and how it responded to and influenced climate change during the Cenozoic It includes terrestrial and marine geology sedimentology glacier geophysics and ship borne geophysics coupled with results from numerical ice sheet and climate modeling The book's content largely mirrors the structure of the Past Antarctic Ice Sheets PAIS program www.scar.org/science/pais formed to investigate past changes in Antarctica by supporting multidisciplinary global research This new edition reflects recent advances and is updated with several new chapters including those covering marine and terrestrial life changes ice shelves advances in numerical modeling and increasing coverage of rates of change The approach of the PAIS program has led to substantial improvement in our knowledge base of past Antarctic change and our understanding of the factors that have guided its evolution Offers an overview of Antarctic climate change analyzing historical present day and future developments Provides the latest information on subjects ranging from terrestrial and marine geology to sedimentology and glacier geophysics in the context of Antarctic evolution Fully updated to include expanded coverage of rates of change advances in numerical modeling marine and terrestrial life changes ice shelves and more

Late Cretaceous/Paleogene West Antarctica Terrestrial Biota and its Intercontinental Affinities Marcelo Reguero, Francisco Goin, Carolina Acosta Hospitaleche, Tania Dutra, Sergio Marenssi, 2012-12-19 One of the most intriguing paleobiogeographical phenomena involving the origins and gradual sundering of Gondwana concerns the close similarities and in most cases inferred sister group relationships of a number of terrestrial and freshwater vertebrate taxa e.g. dinosaurs flying birds mammals etc recovered from uppermost Cretaceous Paleogene deposits of West Antarctica South America and New Zealand Australia For some twenty five extensive and productive investigations in the field of vertebrate paleontology has been carried out in latest Cretaceous and Paleogene deposits in the James Ross Basin northeast of the Antarctic Peninsula AP West Antarctica on the exposed sequences on James Ross Vega Seymour Marambio and Snow Hill islands respectively The available geological geophysical and marine faunistic evidence indicates that the peninsular AP part of West Antarctica and the western part of the tip of South America Magallanic Region southern Chile were positioned very close in the latest Cretaceous and early Paleogene favoring the Overlapping model of South America Antarctic Peninsula paleogeographic reconstruction Late Cretaceous deposits from Vega James Ross Seymour and Snow Hill islands have produced a discrete number of dinosaur taxa and a number of advanced birds together with four mosasaur and three

plesiosaur taxa and a few shark and teleostean taxa *Pacific - Atlantic Mollusc Migration* Jón Eiríksson, Leifur A. Símonarson, 2021-02-17 This volume sheds new light on the marine fauna and geological setting of the Tj rnes Sequence North Iceland which is a classic site for the Pliocene and Pleistocene stratigraphy of the North Atlantic region. Readers will discover descriptions of new data collected by the editors over a period of over three decades on marine faunal assemblages and sedimentology available for palaeoenvironmental reconstructions as well as the tectonic and stratigraphical relationships on Tj rnes Peninsula. The book includes a comprehensive account of all the collections of marine fossil invertebrate macrofossils and foraminifera known to the editors from the Tj rnes Sequence. It is expected to elucidate sedimentological and faunal changes from relatively stable Pliocene conditions to highly variable and periodically harsh climatic conditions of recurring Quaternary glaciations. The distribution, recent or fossil, of various species is recorded and pertinent ecological and biological features are also discussed. The Tj rnes Sequence records the Neogene migration of Pacific species into the North Atlantic. Researchers in geology, climate science, environmental science and earth science will find this book particularly valuable.
