## **Moment In Architecture:**

*Architecture and Modernity* Hilde Heynen, 2000-02-28 Bridges the gap between the history and theory of twentieth century architecture and cultural theories of modernity In this exploration of the relationship between modernity dwelling and architecture Hilde Heynen attempts to bridge the gap between the discourse of the modern movement and cultural theories of modernity On one hand she discusses architecture from the perspective of critical theory and on the other she modifies positions within critical theory by linking them with architecture She assesses architecture as a cultural field that structures daily life and that embodies major contradictions inherent in modernity arguing that architecture nonetheless has a certain capacity to adopt a critical stance vis vis modernity Besides presenting a theoretical discussion of the relation between architecture modernity and dwelling the book provides architectural students with an introduction to the discourse of critical theory The subchapters on Walter Benjamin Ernst Bloch Theodor Adorno and the Venice School Tafuri Dal Co Cacciari can be studied independently for this purpose

**Written Into the Void** Peter Eisenman, 2007-01-01 This volume gathers a selection of architect Peter Eisenman's later writings In these texts he undertakes a variety of tasks including theoretical analyses close readings of his own works and innovative assessments of the designs and writings of other architects and critics

*Architecture's Theory* Catherine Ingraham, 2023-04-18 A collection of illuminating essays exploring what theory makes of architecture and what architecture makes of theory in philosophical and materialized contexts From poststructuralism and deconstruction to current theories of technology and nature critical theory has long been closely aligned with architecture In turn architecture as a thinking profession materializes theory in the form of built work that always carries symbolic loads In this collection of essays Catherine Ingraham studies the complex connectivity between architecture's discipline and practice and theories of philosophy art literature history and politics She argues that there can be no architecture without theory Whether considering architecture's relationship to biomodernity or exploring the ways in which contemporary artists and designers engage in figural play Ingraham offers provocative interpretations that enhance our understanding of both critical theory and architectural practice today Along the way she engages with a wide range of contemporary theorists including Giorgio Agamben Judith Butler Jacques Derrida Graham Harman and Timothy Morton considering buildings around the world including the Palace of Culture in Warsaw the Viceroy's House complex in New Delhi Mack Scogin and Merrill Elam's Wolfsburg Science Center project in Germany and the Superdome in New Orleans Approaching its subject matter from multiple angles *Architecture's Theory* shows how architecture's theoretical and artifactual practices have a unique power to alter culture

**Transdisciplinary Knowledge Production in Architecture and Urbanism** Isabelle Doucet, Nel

Janssens, 2011-01-13 The volume addresses the hybridisation of knowledge production in space related research In contrast with interdisciplinary knowledge which is primarily located in scholarly environments transdisciplinary knowledge production entails a fusion of academic and non academic knowledge theory and practice discipline and profession Architecture and urbanism operating as both a discipline and a profession seems to form a particularly receptive ground for transdisciplinary research However this specificity has not yet been developed into a full fledged unique mode of knowledge production In order to dedicate specific attention to transdisciplinary knowledge production this book aims to explore new hybrid modes of inquiry that allow many of architecture's longstanding schisms to be overcome such as between theory history and practice critical theory and projective design the adoption of an external viewpoint and a view from within often under the guise of bottom up vs top down It therefore offers the reader a mix of contributions that elaborate on knowledge production that is situated in the architectural and urban profession or practice and on practice based approaches in theory

**Architecture Theory since 1968** K. Michael Hays, 2000-02-28 An anthology of the pivotal theoretical texts that have defined architecture culture in the late twentieth century In the discussion of architecture there is a prevailing sentiment that since 1968 cultural production in its traditional sense can no longer be understood to rise spontaneously as a matter of social course but must now be constructed through ever more self conscious theoretical procedures The development of interpretive modes of various stripes post structuralist Marxian phenomenological psychoanalytic as well as others dissenting

or eccentric has given scholars a range of tools for rethinking architecture in relation to other fields and for reasserting architecture's general importance in intellectual discourse. This anthology presents forty-seven of the primary texts of architecture theory, introducing each with an explication of the concepts and categories necessary for its understanding and evaluation. It also presents twelve documents of projects or events that had major theoretical repercussions for the period. Several of the essays appear here in English for the first time. **Global Perspectives on Critical Architecture** Gevork Hartoonian, 2016-03-03

Judging from the debates taking place in both education and practice, it appears that architecture is deeply in crisis. New design and production techniques, together with the globalization of capital and even skilled labour, have reduced architecture to a commodified object, its aesthetic qualities tapping into the current pervasive desire for the spectacular. These developments have changed the architect's role in the design and production processes of architecture. Moreover, critical architectural theories, including those of Breton, Heidegger, and Benjamin, which explored the concepts of technology, modernism, labour, and capital, and how technology informed the cultural, along with later theories from the 1960s which focused more on the architect's theorization of his/her own design strategies, seem increasingly irrelevant. In an age of digital reproduction and commodification, these theoretical approaches need to be reassessed. Bringing together essays and interviews from leading scholars such as Kenneth Frampton, Peggy Deamer, Bernard Tschumi, Donald Kunze, and Marco Biraghi, this volume investigates and critically addresses various dimensions of the present crisis of architecture. It poses questions such as: Is architecture a conservative cultural product servicing a given producer-consumer system? Should architecture's affiliative ties with capitalism be subjected to a measure of criticism that can be expanded to the entirety of the cultural realm? Is architecture's infusion into the cultural the reason for the visibility of architecture today? What room does the city leave for architecture beyond the present delirium of spectacle? Should the thematic of various New Left criticisms of capitalism be taken as the premise of architectural criticism? Or alternatively, putting the notion of criticality aside, is it enough to confine criticism to the production of insightful and pleasurable texts?

**Architecture for a Free Subjectivity** Dr Simone Brott,2013-06-28 Architecture for a Free Subjectivity reformulates the French philosopher Gilles Deleuze s model of subjectivity for architecture by surveying the prolific effects of architectural encounter and the spaces that figure in them For Deleuze and his Lacanian collaborator Félix Guattari subjectivity does not refer to a person but to the potential for and event of matter becoming subject and the myriad ways for this to take place By extension this book theorizes architecture as a self actuating or creative agency for the liberation of purely impersonal effects Imagine a chemical reaction a riot in the banlieues indeed a walk through a city Simone Brott declares that the architectural object does not merely take part in the production of subjectivity but that it constitutes its own This book is to date the only attempt to develop Deleuze s philosophy of subjectivity in singularly architectural terms Through a screening of modern and postmodern American and European works this provocative volume draws the reader into a close encounter with architectural interiors film scenes and other arrangements while interrogating the discourses of subjectivity surrounding them and the evacuation of the subject in the contemporary discussion The impersonal effects of architecture radically changes the methodology just as it reimagines architectural subjectivity for the twenty first century *American Architect and the Architectural Review* ,1891 **Atlas of Orthoses and Assistive Devices - E-BOOK** Douglas P.
