Moments In Space:

Moments in space ,1986 Within the Space of the Moment Espen Vidar,2012-06-29 Simon Mollat woke up in the dunes of Arambol Beach Goa India with an agonizing hangover The year was 2000 and the apocalypse was still a figment of collective imagination the millennium celebration had lasted Simon for four consecutive months A more enlightened soul would have enjoyed the sunrise but not Simon He was being pissed on by a stray dog and somewhere in the back of his mind Pink Floyd wandered in and around his aching head Is there anybody out there Once he had been a promising young man from the land of the midnight sun Current status Man on the lam suffering from depression and aimlessness a stray dog s pissing post His thoughts turned to the stones he d stuffed in his pocket during the night the boat he could easily borrow that could take him away far into the water He would slip out of the boat and dive downward and away from all of his suffering Something intervened and took Simon out of his suicidal head and the recurring Pink Floyd soundtrack it was something itchy and stuffed in the neck opening of his t shirt It was a balled up piece of paper with the photograph of a withered Indian man and a message that read Freedom from this me and signed by someone named Raman Kavalam It smelled of incense and made Simon think of sects robes and cultist brainwashing Simon was by no means a religious person he didn t even believe in God But something compelled him forward to seek out this Raman Kavalam something much larger than himself And so begins the odyssey of Simon Mollat s spiritual awakening Within the Space of the Moment takes readers on an unforgettable journey from despair and outer pleasure to inner peace and the feeling of being intensely alive If there is any formula at all to discovering the truth of who you are it lies in the distinction between an occupied mind and a still or clear one **Henri Lefebvre and the Theory of the Production of Space** Christian Schmid,2022-11-29 Shortlisted for the Deutscher Memorial Prize 2023 This book presents an encompassing detailed and thorough overview and reconstruction of Lefebvre s theory of space and of the urban Henri Lefebvre belongs to the generation of the great French intellectuals and philosophers together with his contemporaries Michel Foucault and Jean Paul Sartre His theory has experienced a remarkable revival over the last two decades and is discussed and applied today in many disciplines in humanities and social sciences particularly in urban studies geography urban sociology urban anthropology architecture and planning Lefebvre together with David Harvey is one of the leading and most read theoreticians in these fields This book explains in an accessible way the theoretical and epistemological context of this work in French philosophy and in the German dialectic Hegel Marx and Nietzsche and reconstructs in detail the historical development of its different elements It also gives an overview on the receptions of Lefebvre and discusses a wide range of applications of this theory in many research fields such as urban and regional development urbanization urbanity social space and everyday life **The Theory of Canonical Moments with Applications in Statistics, Probability, and Analysis** Holger Dette,William J. Hegel and Newtonianism Michael John Petry,2012-12-06 It could certainly be argued that the way in which Hegel criticizes Newton in the Dissertation the Philosophy of Nature and the lectures on the History of Philosophy has done more than anything else to prejudice his own reputation At first sight what we seem to have here is little more than the contrast between the tested accomplishments of the founding father of modern science and the random remarks of a confused and somewhat disgruntled philosopher and if we are persuaded to concede that it may perhaps be something more than this between the work of a clear sighted mathematician and experimentalist and the blind assertions of some sort of Kantian logician blundering about among the facts of the real world By and large it was this clear cut simplistic view of the matter which prevailed among Hegel s contemporaries and which persisted until fairly recently The modification and eventual transformation of it have come about gradually over the past twenty or twenty five years The first full scale commentary on the Philosophy of Nature was published in 1970 and gave rise to the realization that to some extent at least the Hegelian criticism was directed against Newtonianism rather than the work of Newton himself and that it tended to draw its inspiration from developments within the natural sciences rather than from the exigencies imposed upon Hegel s thinking by a priori categorial relationships

Design Theory, Language and Architectural Space in Lewis Carroll Caroline Dionne,2023-07-31 This volume offers spatial theories of the emergent based on a careful close reading of the complete works of nineteenth century writer and mathematician Lewis Carroll from his nonsense fiction to his work on logic and geometry including his two short pamphlets on architecture Drawing on selected key moments in our philosophical tradition including phenomenology and sociospatial theories Caroline Dionne interrogates the relationship between words and spaces highlighting the crucial role of language in processes of placemaking Through an interdisciplinary method that relates literary and language theories to theories of space and placemaking with emphasis on the social and political experience of architectural spaces Dionne investigates Carroll s most famous children s books Alice s Adventures in Wonderland and Through the Looking Glass and What Alice Found There in relation to his lesser known publications on geometry and architecture The book will be of interest to scholars working in design theory design history architecture and literary theory

Bordignon, Roger Beck, 2017-01-17 Aircraft Control Allocation Wayne Durham Virginia Polytechnic Institute and State University USA Kenneth A Bordignon Embry Riddle Aeronautical University USA Roger Beck Dynamic Concepts Inc USA An authoritative work on aircraft control allocation by its pioneers Aircraft Control Allocation addresses the problem of allocating supposed redundant flight controls It provides introductory material on flight dynamics and control to provide the context and then describes in detail the geometry of the problem The book includes a large section on solution methods including Banks method a previously unpublished procedure Generalized inverses are also discussed at length There is an introductory section on linear programming solutions as well as an extensive and comprehensive appendix dedicated to linear programming formulations and solutions Discrete time or frame wise allocation is presented including rate limiting nonlinear data and preferred solutions Key features Written by pioneers in the field of control allocation Comprehensive explanation and discussion of the major control allocation solution methods Extensive treatment of linear programming solutions to control allocation A companion web site contains the code of a MATLAB Simulink flight simulation with modules that incorporate all of the major solution methods Includes examples based on actual aircraft The book is a vital reference for researchers and practitioners working in aircraft control as well as graduate students in aerospace engineering **The Animation Studies Reader** Nichola Dobson, Annabelle Honess Roe, Amy Ratelle, Caroline Ruddell, 2018-10-18 The Animation Studies Reader brings together both key writings within animation studies and new material in emerging areas of the field The collection provides readers with seminal texts that ground animation studies within the contexts of theory and aesthetics form and genre and issues of representation The first section collates key readings on animation theory on how we might conceptualise animation and on some of the fundamental qualities of animation New material is also introduced in this section specifically addressing questions raised by the nature style and materiality of animation The second section outlines some of the main forms that animation takes which includes discussions of genre Although this section cannot be exhaustive the material chosen is particularly useful as it provides samples of analysis that can illuminate some of the issues the first section of the book raises The third section focuses on issues of representation and how the medium of animation might have an impact on how bodies gender sexuality race and ethnicity are represented These representations can only be read through an understanding of the questions that the first two sections of the book raise we can only decode these representations if we take into account form and genre and theoretical conceptualisations such as visual pleasure spectacle the uncanny realism etc **Lattice Boltzmann Method and Its Applications in Engineering** Zhaoli Guo, Chang Shu, 2013 This book covers the fundamental and practical application of the Lattice Boltzmann method LBM This method is a relatively new simulation technique for the modeling of complex fluid systems and has attracted interest from researchers in computational physics **Territorial Investigations** , 2025-02-10

Nowadays there are many spaces of fascination in visual art. Of course installative space and contextual space have been on the art scene for awhile. However they are now accompanied by other spaces such as urban space, architectural space, cyberspace, hyperspace and screen based space. In this volume architects, artists, theorists, three symposia and four exhibitions attempt to find answers to questions such as: Could the architectonic study and/or deconstruction of space play a decisive role in the shift of attention to space? Which theoretical factors structure the current experience and meaning of space? What is the role of the aesthetization of the environment on our concept of space? Smooth Space VCC de Brakke Grond Amsterdam is a project at the heart of this publication. Spatial interests range from how the concept of space is redefined and exploited in our current visual culture to how the digital world influences our spatial concepts. Participants in this issue are Jean Attali, Annette W. Balkema, Andrew Benjamin, Ole Bouman, Bernard Cache, Paul Crowther, Christoph Fink, Hugo Heyrman, Hou Hanru, Rem Koolhaas, Geert Lovink, Karlheinz L. deking, Bartomeu Mari, Kas Oosterhuis, Jan van de Pavert, Keiko Sato, Eran Schaerf, Lara Schnitger, Roger Scruton, Martin Seel, Nasrine Seraji, Henk Slager, Sjoerd Soeters, Lars Spuybroek, Ann Van Sevenant, Peter Weibel and Mark Wigley.

Material Practice and Materiality: Too Long Ignored in Science Education Catherine Milne, Kathryn Scantlebury, 2019-04-11. In this book various scholars explore the material in science and science education and its role in scientific practice such as those practices that are key to the curriculum focuses of science education programs in a number of countries. As a construct, culture can be understood as material and social practice. This definition is useful for informing researchers' nuanced explorations of the nature of science and inclusive decisions about the practice of science education. Sewell 1999. As fields of material social practice and worlds of meaning, cultures are contradictory, contested and weakly bounded. The notion of culture as material social practices leads researchers to accept that material practice is as important as conceptual development, social practice. However in education and science education there is a tendency to ignore material practice and to focus on social practice with language as the arbiter of such social practice. Often material practice such as those associated with scientific instruments and other apparatus is ignored with instruments understood as inscription devices, conduits for language rather than sources of material culture in which scientists share material other than words. Baird 2004 p. 7. When they communicate new knowledge and realities. While we do not ignore the role of language in science we agree with Barad 2003 that perhaps language has too much power and with that power there seems a concomitant loss of interest in exploring how matter and machines/instruments contribute to both ontology and epistemology in science and science education.

The Physical University Paul Temple, 2014-03-21. The great

universities of the world are to a large extent defined in the public imagination by their physical form when people think of a university they usually think of a distinctive place rather than about say the teaching or the research that might go on there This is understandable both because universities usually stay rooted to the same spot over the centuries and because their physical forms may send powerful messages about the kind of places they are The physical form of the university and how the spaces within it become transformed by their users into places which hold meanings for them has become of increased interest recently from both academic and institutional management perspectives when trying to understand more about how universities work and how they may be made more effective Yet despite its seemingly obvious importance the available literature on space and place in higher education internationally is scant when compared to that dealing with say teaching and learning methods or with evaluating quality or many other topics This book brings together a range of academic and professional perspectives on university spaces and places and show how technical matters of building design maintenance and use interact with academic considerations on the goals of the university Space issues are located at an intellectual crossroads where widely differing conceptual and professional perspectives meet and need to be integrated and this important book brings together perspectives from around the world to show design and use issues are changing Higher Education Globally higher education is being required to do more things to teach more students to be better at research to engage more with business and communities and many other things These pressures are leading universities to reconsider their management processes as well as their academic structures an often quoted saying is that we make our buildings and afterwards they make us At a time when universities and colleges are seeking competitive advantages ideas and analysis about space design and use is much needed and will be well received
