Policy Making In An Era Of Global Environmental Change:

Policy Making in an Era of Global Environmental Change R. E. Munn, J. W. M. La Rivière, N. van Lookeren Campagne, 1996-11-18 Thus global change science and policy making are engaged in a process of forming a new partnership that is taking shape as further insights evolve

Policy Making in an Era of Global Environmental Change R. E. Munn, J. W. M. la Rivière, N. van Lookeren Campagne, 2012-12-06 Major international interdisciplinary research programmes are now underway to increase our understanding of how the Earth System operates and how it is changing through the effects of human activities Although understanding and predictive capacity are still limited scientists already agree that significant global changes must be expected in the next 50 years that will affect the capacity of the Earth to sustain life Governments business and industry have therefore come to recognize that scientific knowledge about the changing global environment as yet incomplete but rapidly evolving is becoming indispensable for wise long term policy making the goal being to design preventive adaptive and remedial measures Thus global change science and policy making are engaged in a process of forming a new partnership that is taking shape as further insights evolve Effective continuous interactions between the partners requires mutual understanding decision makers need to understand the unique potential but also the limitations of the results of scientific research in progress while scientists must take into account the priorities and constraints of policy makers in designing and implementing policies that will promote long term sustainability of life on this planet This book contributes in a unique manner to this mutual understanding It gives an overview of the ongoing relevant research focusing on the two major international programmes the International Geosphere Biosphere Programme and the World Climate Research Programme These are described in terms understandable to the interested lay reader The results of the latest review of the Intergovernmental Panel on Climate Change IPCC are included This is followed by an analysis of the response process that is in progress with respect to governments singly and multilaterally by business and industry and by public interest groups This process is leading to interactive structures assessment procedures and legislation nationally and internationally Business and industry are changing from mere watchfulness to recognition of new opportunities for products and processes Six interviews with prominent figures from business and government circles in the Netherlands provide a vivid illustration of the questions at issue The appendices provide overviews of methods for incorporating the results of global change science into policy making and development of long lasting projects Adaptation to climate change serves as an example Thus for the first time one book describes both ongoing research work in global change and the response processes that the research results are evoking It is of interest to all stake holders in the scientific community as well as to decision makers in industry business and government

Environmental Policymaking in an Era of Climate Change Matthew Nowlin, 2019-05-08 As the world considers how to deal with the impacts of a changing climate it s vital that we understand the ways in which the United States policymaking process addresses environmental issues A mix of existing theory and

original analysis Environmental Policymaking in an Era of Climate Change applies recent policy scholarship to questions of environmental governance with a particular focus on climate change The book examines how competing political actors influence policies within and across institutions focusing on both a macro level where formal bodies set the agenda and a meso level where issues are contained within policy subsystems Divided into two sections the book incorporates insights from political science and public policy to provide the reader with a better understanding of how environmental policy decisions are made Part I offers a framework for understanding environmental policymaking exploring the history of environmental policy and discussing the importance of values in environmental policy Part II applies the framework to the issue of climate change focusing on agenda setting and the role of formal institutions in the policymaking process covering topics that include Congress the Executive and Judicial branches and how climate change cuts across policy subsystem boundaries By placing specific climate change case studies in a broader context Environmental Policymaking in an Era of Climate Change will help students enrolled in political science public administration public policy and environmental studies courses as well as all those interested in the impacts of policy on climate change to understand what is and will likely continue to be one of the most pressing policy issues of our time

The Handbook of Environmental Voluntary Agreements Edoardo Croci, 2005-10-06 EDOARDO CROCI IFEF Universit Bocconi Milano Italy Voluntary approaches in environmental policy represent a third wave of regulation in the environmental field Command and control was the first wave Its core is based on uniform emission standards the respect of which needs to be enforced through extensive monitoring and severe sanctions The expected cost of sanction for non compliance calculated as its amount multiplied for the probability to be caught must be superior to the benefits of non compliance in order to let the sanction be effective As the benefits of non compliance can vary among firms sanctions need to be very high in order to be effective In fact sanctions are ordinary correlated to environmental damage and not to the benefits of non compliance But very high sanctions can be difficult to enforce as they appear unfair and can lead to dramatic consequences on firms and workers up to shut downs of plants Ambient standards reduce these problems but oblige the regulator to know a huge amount of information regarding the specific contribution of each polluter to the polluted body Information is difficult to obtain because of asymmetric information and costly to produce because it requires large and skilled regulating and enforcing organizations Nevertheless complex regulation is the base of any environmental policy framework as it allows the policy maker to fully exercise its power of composition of various interests in a relatively transparent way Economic instruments were the second wave

Decision Making for Complex Socio-Technical Systems Thomas Flüeler, 2006-03-08 Waste management can be considered as a mirror of society In its our fluctuating definition besides conserving a supply of valuable materials and resources it acts as a fascinating expression for our throw away mentality Waste is inevitable but it nevertheless provides an opportunity a need and an incentive for society to pursue a more careful management of it If this is successfully carried out society may well find

it possible to manage itself in an overall more careful and universal way The management or governance of radioactive waste particularly is determined by a complex constellation of individuals social aggregates and institutions A wealth of interconnected parts forms a complex and volatile system that is highly technical and explosively political in nature The problems inherent in this system must be managed so as to reach a safe acceptable responsible feasible and sustainable solution It is a system with an objective long term dimension with a hazard potential of in part hundreds of thousands of years and it has a long term institutional dimension insofar as its implementation must last for decades The very notion of risk extends from the long life of radionuclides over the perception of dread to the decisional risk of whether when and how to implement an agreed upon solution

Turmoil in American Public Policy Leslie R. Alm, Ross E. Burkhart, Marc V. Simon, 2010-04-15 This book explores the intricacies of the science policy linkage that pervades environmental policymaking in a democracy These are the key questions that this primary textbook for courses on American public policymaking and environmental policymaking addresses and attempts to answer *Turmoil in American Public Policy* Science Democracy and the Environment first lays out the basics of the policymaking process in the United States in relation to the substantive issues of environmental policymaking Drawing on hundreds of interviews the authors highlight the views and experiences of scientists especially natural scientists in their interactions with policymakers and their efforts to harness the findings of their science to rational public policy The proper role of science and scientists in relation to environmental policymaking hinges on fundamental questions at the intersection of political philosophy and scientific epistemology How can the experimental nature of the scientific method and the probabilistic expression of scientific results be squared with the normative language of legislation and regulation If scientists undertake to square the circle by hardening the tentative truths of their scientific models into positive truths to underpin public policy at what point may they be judged to have exceeded the proper limits of scientific knowledge relinquished their role as impartial experts and become partisan advocates demanding too much say in a democratic setting Providing students and secondarily policymakers scientists and citizen activists a theoretical and practical knowledge of the means availed by modern American democracy for resolving this tension is the object of this progressively structured textbook

A Thousand Shades of Green Peter Winsemius, Ulrich Guntram, 2013-06-17 What does it mean for the environment is a strategic corollary of almost any significant business decision today and companies must take seriously their responsibilities to regulators customers employees and the wider society *A Thousand Shades of Green* is aimed at business leaders in need of a clear understanding of the key corporate environmental challenges and the insight and vision to meet them imperatives such as engaging stakeholders and developing partnerships understanding the policy making process forming corporate responses and drafting environmental management strategies with the promise of genuine competitive advantage for their companies Drawing on their extensive consultancy experience with some of the most progressive companies around the world the authors examine why and how businesses must confront the rapidly developing agenda set

by environmental constraints and social and regulatory pressure They identify the corporate environmental challenge with that of change management and advocate a recognition that there is no single strategy or endgame applicable to all companies there are a thousand shades of green Only by pursuing thorough reflective consistent competitive and proactive strategies will businesses be able to avoid being embroiled in costly and complex reactive approaches *International*

Environmental Governance Bas Arts,Pieter Leroy,2006-09-09 Environmental policy in its broadest context has been significantly revitalized and renewed during the last two decades That observation is nothing new attested to by the number of publications conferences and both private and public projects that have been initiated However our understanding of the dynamics of this renewal has generally been informed by studies on single policies and projects leaving us with a limited understanding of what the newness consists of in terms of an integrated perspective This book presents fresh analyses of a number of well known cases but does so from one comprehensive view the so called policy arrangement approach Cases discussed range over organic farming integrated water management nature policy cultural heritage policy integrated region oriented policy corporate environmental management and target group policy always in search of the commonality of experience and conclusions to be drawn in understanding the past and in formulating future perspectives Participation and the Quality of Environmental Decision Making F. Coenen,D. Huitema,Laurence J. O'Toole Jr.,2012-12-06 It is clear that our society must become a more sustainable one To that end we must change both our production and our consumption patterns Some argue that this implies the abolition of democratic processes and thus of citizens participation in environmental policy Others argue the opposite the only way to avoid impending environmental disaster is by engaging in common deliberation and contemplation Is participation then a negative force or not This volume is one of the first

coordinated attempts to study the relationship between democratic participatory forms of decision making and the quality of environmental decisions. The central question is how can the normatively desirable practice of participatory decision making be combined with an effective approach to environmental issues. Guided by a theoretical introduction by the editors, the 15 chapters deal with topics ranging from the scale of environmental problems (local agenda 21, infrastructural decisions, strategic planning) to environmental policy in developing countries. Three chapters are devoted to each of these broad themes. Each presents either a theoretical or an empirical argument about the central research question, shedding light on such issues as the measurement of decision quality, participation techniques, and the link between participation and decision quality, drawing on experience gained in Europe, North and South America, Asia, and Africa. The introductions to the individual parts of the book have been collectively written by the contributors, who represent a range of professional disciplines including political science, public policy, and planning.
