Atomic Collective Magdalena E. Stawkowski, 2025-04-30 In the aftermath of the Soviet Union's collapse Kazakhstan inherited the remnants of one of the world's most contaminated landscapes the Semipalatinsk Test Site known locally as the Polygon Resigned to dispossession residents have chosen to remain on the abandoned nuclear test site despite the isolation and the radioactive environment rather than face marginalization or the rigors of a neoliberal world Atomic Collective examines this nuclear legacy through a decade long ethnographic examination of the village of Koian situated on the border of the test site Facing residual radiation all around them and isolation Koianers persist reshaping their pastoral existence among the ruins and scientific debates surrounding genetic damage Drawing on first hand accounts and archival research this book explores the resilience and everyday survival strategies of a community left behind to fend for itself in the shadow of nuclear testing It offers a unique perspective on life in a nuclear zone and poses fundamental questions about human resilience and the impact of historical events on a collective identity Atomic Collective sheds light on a community overlooked in the larger Cold War histories of atomic testing **Smart Green Innovations in Industry 4.0** Elena G.

Popkova, 2023-12-07 This book is concerned with the study of climate change from the perspective of risks for the economy and business Rethinking climate change from a risk perspective allows making a significant transition from the consideration of climate as a predetermined and permanent context to its interpretation as a factor that influences the economy and business Thanks to the new risk perspective on climate change the book offers opportunities and offers recommendations for adapting businesses and economic sectors to climate risks As a forward looking response management measure to the risks of climate change in the economy and business this book suggests using smart green innovations in Industry 4.0 high technologies in support of the sustainable development goals SDGs The advantage of smart technologies to combat climate change is their increased flexibility and adaptability as well as the resistance of smart automated robotic machines to different environmental conditions The academic significance of the book is attributable to the fact that it covers as widely and comprehensively as possible the full range of ground breaking smart green innovations in Industry 4.0 with a potential of climate change risk management from green finance for example blockchain based cryptocurrencies to smart and clean

energy as well as smart industrial innovations in Industry 4.0. The combination of public and corporate risk management measures of climate change allows achieving a synergetic effect in the form of enhanced support for the implementation of the SDGs.

The Physical Geography of Northern Eurasia Maria Shahgedanova, 2003. This is the third volume in The Oxford Regional Environments series. The series volumes are devoted to major regions of the world each presenting a detailed and up to date body of scientific knowledge concerning a particular region. For most topics on the physical geography of Northern Eurasia abundant literature now exists. Most of it however is in Russian and other East European languages and this has significantly limited the number of potential readers. This volume seeks to familiarize at an international level those with an interest in this area with the most significant achievements in classical and current geographical research. The Physical Geography of Northern Eurasia covers most of the territory of the former USSR. The first section discusses the individual components of the physical environment. These chapters cut across regional boundaries and treat the area discussed as a whole. A regional analysis follows mainly in the context of geographical zonation though a number of specific regions are given individual treatment. The concluding chapters discuss the effects of anthropogenic activities on the physical environment. The approach is an integrative one tying together various aspects of the physical environments with the environmental implications of human activities. Every component of the environment is treated as a step in the development of the multi faceted landscapes which in turn provide possibilities and limitations for cultural and economic usage.
